Examiner : [REDACTED]

Examiner's Designation Number: [REDACTED]

Total Hours SE land: 188.1

Total Hours in a PA28: 139.8

Completed walk around, no deficiencies found. Taxied to runup area completed checklist. Took off runway 23, stayed in the pattern for one loop. Performed a touch and go, engine failed at 200ft on climb out. Did not have altitude to turn back to the field. The throttle was retarded and advanced to attempt to reestablish power. Power momentarily increased, then the engine immediately lost power again. Was forced to put the plane down just off the end of runway 23. After the plane came to a rest, radioed to KCPK Unicom that myself and passenger were uninjured secured the plane, rotated fuel selector to off, pulled throttle to idle and mixture to cutoff, gathered our belongings and exited the plane.
