

My name is HISHAM EID

I'm a student pilot at Paris air my certificate number # [REDACTED]

I was tanning on my landings at 7/5/2018 with my instructor Sean Malone

I request a touch and go and we took off at runway 30L at 10:30AM and the tower told us to make right traffic to runway 30R and when we turn from base to final the throttle was decreasing I tried to add more throttle but there was no respond and I told my instructor and then he says my control and the engine was running so rough and the propeller was moving very slow then we tried to do the engine failure checklist ,we were at 600 to 500 ft so my instructor looked for the best place to land so he banked to the right and we landed at the left side of the rail road it was hard but save too
