Hi Leah,

Unfortunately, no data was recovered from the two devices sent in for ERA18LA249.

The Garmin GPSMAP 195 has volatile memory than is retained by a 3 volt button battery internal to the device. The battery has retained its charge however the memory (if track log data was enabled) could not be extracted due to damage to the circuit board and display. The memory chip on the EIS 2000 was destroyed.

Please let me know if you need a no data factual for these devices.

V/r,
Gerald Kawamoto
