On or about August 22nd, I received a call from Alex MacKenzie, the manager of Go Skydive Boston a/k/a Skydive South Boston to inquire whether I might be available to fly jumpers between August 24th to August 27th, 2018(Friday through Monday). I accepted the invitation and travelled from Orlando International Airport to Boston's Logan International Airport on Thursday, August 23, 2018 on a flight departing at 3:33 PM. Upon arrival in Boston, I took an Uber to the Cranland Airport located at 777 Monponsett Street, in Hanson, Massachusetts. Upon my arrival I was shown where I was to reside for the weekend. Friday morning I was introduced to the company's staff and given access to airplane documentation and records, and I was shown to the aircraft itself, a Cessna 182. At 8 AM, I performed a complete preflight inspection of the aircraft in accordance with the Cessna 182 owner's handbook provided with the Aircraft. I found no issues with the aircraft. My Preflight procedure off checklist included: - Checking fuel and oil quantity and quality were sufficient for upcoming operations. - Removing Control Lock - Checking Circuit Breakers - Magnetos, Avionics and Master Switches confirmed Off. - Master Switch On, check fuel, electronics, lights, alt-static, annunciator panel, extend flaps, stall-warning check. - Master Switch Off. - Remove Tie-downs. - Check control surfaces, free and secure. - Check antennas. - Check Right-Wing Flaps, Ailerons, Fuel Tank Vent clear, Main Wheel Tire check pressure and brakes, Fuel Tank Sump, Check Fuel Quantity Visually. - Check Nose, static-source opening clear, air intakes clear, propeller check for abnormal cracks or shape, nose wheel strut/tire. - Check Left-Wing Flaps, Ailerons, Main Wheel Tire check pressure and brakes, Pitot-Tube Cover Removed, Fuel Tank Sump, Check Fuel Quantity Visually. After completing the walk-around and initial preflight inspection, I was given leave to perform a few laps in the pattern to familiarize myself with the airport and aircraft systems before carrying passengers. I followed the handbook's pre-start procedures and completed the final items on the checklist, including the run-up. When I performed a run-up, I observed that the engine instruments were reading normal and in the green. I then proceeded to perform 2 full-stop takeoffs and landings to familiarize myself with the airport and the aircraft's systems before carrying passengers. After performing the two full stop landings I felt sufficiently familiar with the aircraft and the airport that I informed Mr. MacKenzie that I was prepared to carry passengers as part of the skydiving operations. Following proper procedures, I called into Boston Approach and notified them that operations would be in effect from 10 AM to 5 PM. I operated the aircraft for the duration of the day executing 9 additional takeoffs and landings and delivering approximately 9 loads of jumpers without incident. The aircraft functioned without any noticeable issues during Friday's flights. On our final Friday load, I noticed an aircraft sitting in the water at the end of the runway, and attempted to notify aid for a potential crash, however first-responders were already arriving. Saturday and Sunday, operations proceeded without incident. I successfully completed an additional 28 takeoffs and landings delivering an additional 28 loads of jumpers without incident. During the Saturday and Sunday flights I did notice that the oil temperature gauge was running in the high end of the green. Therefore, I notified the manager, Mr. MacKenzie, of this fact, and I made multiple checks of the oil-levels throughout the weekend. I confirmed by observing the oil dipstick that the oil levels remained well above minimums throughout the weekend (41-42 etc). The oil also appeared to be relatively clean. The oil gauges never exceeded standard operating ranges. In total					

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I would recommend getting rid of the ditch/road off the end of Runway 18. The damages to the aircraft would have likely been minimized if not for the sudden dip in terrain elevation that caused the aircraft to flip.
A longer runway would have prevented the issue as well.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)

Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No
(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

I suffered an electrical failure and engine roughness on climb-out, continuing and escalating throughout the duration of the flight.

EVACUATION OF AIRCRAFT

Was an emergency evacuation of the aircraft performed? ☒ Yes ☐ No

Method of Exit – Describe how the occupants exited and how many occupants evacuated each location

I evacuated the aircraft immediately after the incident. I unbuckled my seatbelt, opened the jump-door and crawled out. I made certain to clear the area as quickly as possible in case it was dangerous to remain around the aircraft.
