These rules state the authority of the NTSB, define accidents, incidents, injuries, and other terms, and provide procedures for initial and immediate notification of accidents and incidents by aircraft pilots/operators.

#### A. APPLICABILITY

The pilot/operator of an aircraft shall send a report to the office listed above, based on accident/incident location; immediate notification is required by 49 CFR 830.5(a). **The report shall be filed within 10 days after an accident for which notification is required by Section 830.5, or after 7 days if an overdue aircraft is still missing.**

An aircraft accident, as defined in 49 CFR 830.2, is determined as an occurrence that involves a fatality or serious injury, or substantial damage to the aircraft. For occurrences that do not involve a fatality, the determination that the occurrence is an accident can be appealed by writing to the Director, Office of Aviation Safety, NTSB, 490 L'Enfant Plaza, S.W., Washington, D.C. 20594.

#### B. DEFINITIONS

1. "Aircraft Accident" means an occurrence associated with the operation of an aircraft that takes place between the time any person boards the aircraft with the intention of flight and all such persons have disembarked, and in which any person suffers death, or serious injury, or in which the aircraft receives substantial damage. For purposes of this form, the definition of "aircraft accident" includes "unmanned aircraft accident," as defined at 49 CFR 830.2.

2. "Substantial Damage" means damage or failure that adversely affects the structural strength, performance or flight characteristics of the aircraft, and that would normally require major repair or replacement of the affected component. NOTE: Engine failure or damage limited to an engine if only one engine fails or is damaged, bent fairing or cowling, dented skin, small puncture holes in the skin or fabric, ground damage to rotor or propeller blades, and damage to landing gear, wheels, tires, flaps, engine accessories, brakes, or wing tips are not considered "substantial damage" for purposes of this report.

3. "Operator" means any person who causes or authorizes the operation of an aircraft, such as the owner, lessee, or bailee of an aircraft.

4. "Fatal Injury" means any injury that results in death within thirty (30) days of the accident.

5. "Serious Injury" means any injury that (1) requires hospitalization for more than 48 hours, commencing within 7 days from the date the injury was received; (2) results in a fracture of any bone (except simple fracture of fingers, toes, or nose); (3) causes severe hemorrhages, nerve, muscle, or tendon damage; (4) involves injury to any internal organ; or (5) involves second- or third-degree burns, or any burns affecting more than 5 percent of the body surface.

**Type of Fire Extinguishing System:** If a fire extinguishing system was used to fight an aircraft fire, specify the type(s) of extinguishing system(s) used. Examples include handheld extinguisher, engine fire bottle, cargo/baggage compartment fire suppression system, or airport emergency ground equipment.

**Owner/Operator Information:** Enter the owner information as shown on the registration certificate. Commercial operators, enter the operator information, including "doing business as" when applicable, as shown on the operator certificate.

**Revenue Sightseeing Flight:** Indicate whether the accident aircraft was conducting **revenue** sightseeing operations under 14 CFR Part 91 at the time of the accident.

**Air Medical Flight:** Indicate whether the accident flight was being conducted for the purpose of carrying medical personnel, patient(s), or organs.

**Public Aircraft:** Federal, state or local government flight operations such as official travel, law-enforcement, low-level observation, aerial application, firefighting, search and rescue, biological or geological resource management, or aeronautical research. Indicate whether the flight was conducted by the armed forces, federal, state, or local government.

**Purpose of Flight:** 14 CFR Parts 91, 103, 133, 136, and 137: Indicate the type of operation that was being conducted at the time of the occurrence using the following definitions:

**AERIAL APPLICATION**--Operations using an aircraft to perform aerial application or dispersion of any substance. Examples include agricultural, health, forestry, cloud seeding, firefighting, insect control, etc.

**AERIAL OBSERVATION**--These flights include aerial mapping/photography, patrol, search and rescue, hunting, highway traffic advisory, ranching, surveillance, oil and mineral exploration, criminal pursuit, fish spotting, etc.

**AIR DROP**--Aerial operations, other than aerial application, that are intended to release items in flight.

**AIR RACE/SHOW**--Includes any flight operations conducted as part of an organized air race or public demonstration.

**BUSINESS**--includes all personal flying without a paid professional crew for reasons associated with furthering a business, including transportation to and from business meetings or work. This does not include corporate/executive operations, air taxi, or commuter operations.

**EXECUTIVE/CORPORATE**--Company flying with a paid, professional crew.

**FERRY**--Non-revenue flight under a special flight or "ferry" permit. Refer to 14 CFR 21.197 for details of special flight permit issuance.

**FLIGHT TEST**--Flight for the purpose of investigating the flight characteristics of an aircraft/aircraft component or evaluating an applicant for a pilot certificate or rating.

**INSTRUCTIONAL**--Flying while under the supervision of a flight instructor or receiving air carrier training. Personal proficiency flight operations and personal flight reviews, as required by federal air regulations, are excluded.

**OTHER WORK USE**--Miscellaneous flight operations conducted for compensation or hire such as construction work (not 14 CFR Part 135 operation), parachuting, aerial advertising, towing gliders, etc.

**PERSONAL**--Flying for personal reasons (excludes business transportation) including pleasure or personal transportation. This also includes practice or proficiency flights performed under flight instructor supervision and not part of an approved flight training program.

Also indicate the height above ground level and coverage of the lowest cloud ceiling present at the time of the accident/incident (reported as broken or overcast).

**NOTAMs (D and FDC), AIRMETs, SIGMETs, PIREPs:** Describe all NOTAMs (distant (D) or Flight Data Center (FDC), if known), AIRMETs, SIGMETs, and PIREPs in effect near the accident/incident.

**Flight Crewmember Information:** Indicate the category that best describes the capacity served by this flight crewmember at the time of the accident. The designators "Flight Crewmember 1" and "Flight Crewmember 2" do not refer to a specific pilot position or responsibility. If more than one pilot is aboard, they may be entered in any order and their capacity entered as appropriate.

This also includes a check airman performing official duties but does not include cabin crew. State the capacity served by each included crewmember at the time of the accident.

**Passenger(s)/Other Personnel:** Enter identification and injury severity information for all passengers, cabin crew, and other personnel involved in the accident. See Page 1 of the instructions for the official definition of injury levels.

Several questions throughout the form allow for multiple responses; when appropriate, choose all responses that apply.

**These instructions only pertain to major issue areas covered by NTSB Form 6120.1 Pilot/Operator Aircraft Accident/Incident Report. For additional definitions of questions and responses, please refer to [www.nts.gov](http://www.nts.gov).**

**NARRATIVE HISTORY OF FLIGHT** *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I Arrived at aircraft to perform preflight inspection at 0645 local time per the approved aircraft manual/checklist. At 0700 local time meet passenger and escorted back the aircraft. I performed a weight and balance check to verify we were below maximum gross takeoff weight. Unchained the aircraft, entered the aircraft and started passenger brief to include route of flight, seat belt operation, door latch operation, and communication protocol. After making sure passenger, flight bag/cargo were secure, performed "before engine start checklist". Normal Cold Engine start was performed, then performed after engine checklist, obtained ATIS information Charlie, checked brake operation upon start of taxi from parking space, taxied westbound from HOTEL Ramp area to ALPHA Eight. Prior to reaching ALPHA Eight Taxiway, ATIS Information DELTA was announced as current and proceeded to obtain current ATIS information. Upon updating altimeter, called KAPA Ground to request Northwest departure along with needed a run-up in the North Run-up area via Taxiway ALPHA. After arriving to KAPA North Run-up area, set parking brake, verified that all baggage/cargo was secure, set COMMS, NAVS, and GPS to necessary frequencies and cycled ADSB transponder. Waited for at least five minutes to verify that engine temperature was warm before starting Ground Check - check list. Verified that all engine gauge (oil pressure - temperature) were in normal/green operating ranges and performed standard Ground Check per approved flight manual. These items included fuel on proper tank, leaning mixture, checking carburetor heat application, engine and electric fuel pump pressure operation, vacuum gauge, alternator, and magneto check. The magnetos were checked twice to verify normal operations. Engine RPM was then reduced to 1000 RPMs and AD 76-07-12 (Bendix Ignition) was checked to insure proper grounding.

After completion of the Ground Check - check list, performed passenger take off briefing and then advised KAPA Ground controller that Cherokee 5575U's run-up was complete and ready for northwest departure. Ground Controller issued taxi instructions to Rwy 17L via ALPHA. Upon reaching Rwy 17L, Ground controller advised me to monitor KAPA Tower frequency. I then begin to perform the approved Take Off check list.

KAPA Tower controller then issued my take off clearance to include "straight out, wind calm". I started to taxi N5575U and align on the center-line of runway 17L. I verified the wind direction and speed and noted it was calm. Twenty-five degrees of flaps were set per the approved flight manual short field operations; full throttle tachometer was advanced full forward with an indication of 2200 RPMs. Call outs of "Tach Green, Engine instruments Green" were stated over the intercom and the takeoff roll was started. Based upon prior operations in the aircraft, the engine instruments were indicating full power. Once airspeed was registered on the airspeed indicator, "Airspeed alive" was called out. I noticed that the takeoff roll was longer than usual but attributed that to having a passenger in the aircraft as opposed to my usual single occupancy operations. The indicated airspeed reached 40 MPH, then 50, and once 60 MPH was obtained slight back pressure was applied on the yoke for the plane to start flying. The approved Short field take off procedure was then followed. I accelerated the aircraft to 85 MPH and then begin the initial climb. The Vertical Speed Indicator indicated normal performance of 400'-500' per minute rate of ascend. Approximately 200 feet above the ground I reduced the flap setting to ten degrees/first flap setting per the approved Short Field Take Off manual operation. The aircraft continued to climb at best rate of climb speed, 85 MPH. I then visually noticed the aircraft rate of climb was deteriorating from outside visual cues. My passenger called out traffic to our right on the parallel runway and mentioned that he noticed the Vertical Speed Indicator was decreasing. I then noticed the Stall Warning light was intermittently flashing. I immediately pitched the aircraft for best glide of approximately 80-83 MPH per the approved flight manual. I verified that full forward throttle was still applied, then applied full Rich mixture. I applied Carburetor heat ON and then reduced the flap setting to zero to remove any excess drag. I noticed a decrease in RPM from the application of the carburetor heat ON and accessed that carburetor ice was not a factor based on no engine roughness prior to applying along with atmospheric conditions or the Lycoming O-320 engine conducive to icing. I then switched the Carburetor Heat to the OFF position to maintain a higher RPM setting. The Vertical Speed Indicator continued to decrease to around 100-200' per minute. I verified electric fuel pump on and fuel pressure flow, ignition switch on both. The Tachometer indicated approximately 2300-2400 RPMs but since we were in a pitch-down attitude, by this time and altitude the RPM should have been increasing. KAPA tower controller then approved N5575U for "right turn, westbound to I25 and then on course". I replied to ATC with "Rodger, Cherokee 75U" as I continued to access the climb out. I delayed my turn while visually scanning the ground for a suitable off airport landing spot in the event that it was needed.

**RECOMMENDATION (How could this accident/incident have been prevented?)****Operator/Owner Safety Recommendation**

I accessed the situation and did not want to start a turn knowing that my altitude was not increasing and at best case was maintaining my current altitude if not slightly decreasing. Also knowing that altitude would be lost while performing a turn. However, I also knew that the terrain rises south of the airport and includes large power lines and towers and a reservoir a few miles south. I then made a call to ATC requesting a return to the airport. ATC advised me to enter "right downwind for Rwy 17R". I replied with "Cherokee 75U, Right downwind". ATC then advised if I need assistance. I noticed the Tachometer decreased to 2200 RPMs, I maintained an indicated airspeed of 80-83 MPH and verified the Trim setting was slight nose downward per the approved flight manual. I started to make a shallow bank to the right and notified ATC "75U, we have situation here". The left wing dropped momentarily, I leveled the aircraft, verified the indicated airspeed was 80-83 MPH, and then noticed the tachometer indicated 2000 RPMs. The aircraft was slowly descending and I verified my off airport landing site was clear of obstacles. I pushed the yoke mic switch and stated "we are going down, we are going down!". I noticed that my thumb had slipped off the mic switch and the transmission was never broadcast-ed so I re-broadcast-ed "we are going down, we are going down!". Then the engine seemed to lose power as I heard a decrease in engine sound and forward momentum in my seat before the engine surged back to the previous engine sound and the tachometer increased to around 2100 RPMs. I then begin the flare process by reducing power to idle, mixture cut off and yoke back pressure. Shortly after we impacted the ground and slid to a stop. I turned the ignition key to the OFF position, asked if my passenger was okay and then told him to "get out, get out". We both exited the aircraft and moved north of the aircraft toward Lincoln Blvd. I again asked if my passenger as okay and then immediately called KAPA ATC Tower phone number to advice of our location. After five rings and no answer I then called the KAPA operations phone number and advised the agent that N5575U had landed off the airport just south of Lincoln in a field and we were out of the aircraft. I then noticed that the beacon was still on the aircraft and re-entered to switch off avionics, lights, beacon, and master switches.
