

Bonanza V-Tail Accident – Murfreesboro Airport

Dale and I were in the terminal and a pilot advised on Unicom that he was having amperage issues and would possibly have to make a landing without radios. He got closer and asked for a gear check, so we went out to the taxi way and as he did the low pass we told him his gear was not down and locked. He proceeded past the runway losing altitude and eventually looked like he stalled and fell into the tree line at that moment I contacted 911 as we were all running to the scene.

Dale Lanier V-Tail Bonanza Crash Murfreesboro Tennessee 10/28/2018

Me and Nathaniel were sitting at the main desk in the terminal, when we heard someone on the Unicom say he was losing amperage and would most likely land without any radios. A few minutes later he called again asking for a gear check, so we went to the taxiway with a radio and saw his gear was halfway down but not fully locked. I told him on the radio his gear wasn't down, but he didn't answer back. Next, we saw him continue down the runway going very slow and disappear behind the trees where he crashed.
