Subject: Aviation accident November 4th 2018

November 4th 2018 we arrived at air acres airstrip around 9 a.m. performed a pre flight walk around of our Cessna 150 N3515J. Made two different calls weather reporting stations Cherokee County AWOS. And McCullum Tower awos. We check wind direction at 5Ga4 as well .

We go thru runup and preflight checklist.

As we start rollout we gain speed . We get up out of ground effect and begin our climbout .

As we clear tree line to our east the plane seems to struggle to climb . Stall horn goes off . At that moment we are headed down into trees . Pilot in command not able to correct stall. Blank space for me until we are on the ground. Crashed in the woods. I remember seeing trees coming at us but until after impact no memory of trees or circumstance of plane performance.
