NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Flight commenced from KEMP - KLAL and then from KLAL - KEMP. We took off from KEMP at 7:30 AM and reached KLAL at 10:00 AM. While coming back we topped off from KLAL and departed at 10:30 AM with proper pre-flight check.

After reaching near Big cypress we descended from 5500ft to 2500ft and were cruising for 10 min. We experienced 200 RPM drop which indicates carb icing. Carb heat was applied and then we achieved our normal cruising RPM. However after some time again we experienced the same but with engine vibrations and RPM drop was 500 RPM this time. We applied carb heat again and were trying to maintain the same altitude but we were losing the altitude. After 15 mins we were at 1500 RPM. We tried everything to regain our power but RPM was not going above 1700, we started circling near the field for best place to land and decided to make emergency landing. Safety Pilot Adil Biju helped me with the checklist for emergency landing and he declared emergency on 121.5 by squawking 7700. I started descending towards the road. On approach we experienced heavy quattering tailwind. Due to increase in speed we ~~reached~~ reached near the bend of the road, so I gave full throttle to pass the bend. Now as we passed the bend we had limited distance from the sugarcane field ahead of us, ~~with~~ with airspeed of upto 80 kts. So retracted by flaps back to 0° and made soft field landing just beside the road, on the ploughed field to get good braking due to soft soil. I maintained the nose up till end and when the speed slowed down nose wheel came down and plane flipped. We both came out safe without any scratch.

We contacted on 121.5 to declare emergency, ~~and~~ we didn't ask about the winds because the person putted us on standby and the airplane was vibrating so much, even it was becoming harder to hold the yoke so we took chance of landing without asking about the wind.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation : Both pilots are properly rated and airplane was in airworthy condition. Since it was a mechanical failure it was an unfortunate situation. Pilots could have reacted to this emergency after reviewing the procedures of the issue looks like lack of experience contributed a part to it. From companies part we should have checked on the part suppliers credibility, but cannot blame them until all parts are analyzed. It was an unfortunate accident which can happen anytime, we learn from this and act accordingly to future.
