Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Aircraft destroyed by fire after egress. Small brush fire near plane.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

At approximately 1700 hrs on 3/26/19 after taxiing and normal run up I took off on runway 27 at FL10. Winds were light and variable, humidity was high, temperature was around 78 degrees F and I was planning on staying in the pattern. During rollout I noticed it took longer than usual to get up to speed and lift the tail which is normally at 40 MPH. I briefly considered aborting but the tail did raise and when I approached 50 MPH which is when I usually rotated, the plane became airborne. I didn't feel that the plane was developing the usual power but I didn't look at the tach, just the airspeed indicator. I had used up a significant portion of the runway and in hindsight I feel that an aborted takeoff at that time could have been more catastrophic and could have resulted in cartwheeling and entering the road at the end of the runway.

As the plane slowly climbed I barely cleared the height of the trees at the end of the runway and soon after the left wing dropped which I immediately corrected and then the right wing immediately dropped and I realized it was trying to stall. That led me to lower the nose to counter the stall. This happened in a 2 or 3 second timeframe. My altitude was insufficient to recover and I landed straight ahead in a young pine plantation. Within 1 minute after I egressed from the place, a fire broke out which consumed the plane. I was uninjured and a small brush fire ensued which was extinguished by the local fire department.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I should have also monitored the tach as well as airspeed indicator to ensure the engine was developing full RPM. At the first indication that the takeoff roll was taking longer than normal and my initial thought of aborting, I should have aborted. By delaying I ran out of time and runway to safely abort.
