Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Aircraft came to rest in a tree, approximately 10 to 15 feet off the ground. Damage to both the left wing and right wing could be seen from the ground, but actual damage has not yet been determined because aircraft was not retrieved from the tree until August 30, 2019.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On August 22, 2019, the Cirrus SR22T aircraft, N404PE (the "Aircraft"), was being flown on a roundtrip from Medina Municipal Airport (1G5), Medina, Ohio, to Donaldson Center Airport (KGYH), Greenville, South Carolina, with one crew member, pilot in command David Storm ("PIC Storm") and one passenger on board for the return leg. The flights were non commercial and conducted pursuant to Part 91 of the Federal Aviation Regulations.

Before initial departure from Medina, PIC Storm obtained a weather briefing by calling the Aviation Weather Center's Flight Service Station (800-WXBRIEF). Before the return flight from Greenville to Medina, PIC Storm again reviewed the weather and confirmed there were no changes from the morning briefing. PIC Storm also had the SR22T fuel tanks topped off with 81 gallons of aviation gasoline and added one quart of oil to the engine. Before taxiing out, PIC Storm received an Instrument Flight Rules (IFR) clearance from Donaldson tower, and was given vectors from Greer (S.C.) Air Traffic Control (ATC) to the initial fix at 10,000 feet. The Aircraft departed KGYH at 12:16 p.m. EDT.

Shortly after climbing to 10,000 feet, Greer handed the Aircraft off to Atlanta ATC, which cleared PIC Storm to climb to 15,000 feet in accordance with the flight plan he had filed earlier that day. At this point, PIC Storm noted, visually and on Nexrad weather radar, that thunderstorms were building with cumulonimbus clouds along the route of flight. PIC Storm then asked Atlanta ATC for clearance to 17,000 feet. Atlanta ATC gave that approval and also vectored the Aircraft for a 30-degree left turn. It appeared to PIC Storm that Atlanta ATC had given this instruction because he could see, visually and on Nexrad, that this new course would take the Aircraft through the buildup of two separate storm cells. From a distance, PIC Storm believed the Aircraft would be on top of the build-up, and would be going between the two cells.

As the Aircraft got closer to the developing weather system, the Aircraft's Nexrad still indicated the Aircraft would be passing between the storm cells, but it would have some initial penetration of clouds that did not appear dangerous to PIC Storm. However, upon entering the clouds, the Aircraft was impacted by very strong turbulence. As a result, PIC Storm took control of the Aircraft from autopilot and flew the Aircraft himself. PIC Storm was able to level the wings with a climbing attitude. At that time, the Aircraft was below the cloud layer and PIC Storm could see the Aircraft was heading for a mountain, Mount Mitchell. When PIC Storm began to initiate a climb to avoid the mountain, the airplane engine shut down, despite the fuel boost pump being on and the mixture set in accordance with the Aircraft's Pilot Operating Handbook recommendations.

The Cirrus SR 22T is equipped with the Cirrus Airframe Parachute System (CAPS), a parachute system embedded in the fuselage designed to lower the entire aircraft to the ground through the inflation of a canopy 65 feet in diameter. At this point, PIC Storm made the decision to deploy the CAPS system because he did not believe there was sufficient time to go through any checklist or emergency procedures. The Aircraft descended underneath the parachute until it landed in a heavily forested area immediately adjacent to North Carolina's Mount Mitchell State Park, coming to rest in a treetop some 10 to 15 feet off the ground at approximately 12:50 p.m. EDT. The pilot and passenger were able to extricate themselves from the Aircraft, exiting from the pilot side door, and reaching the ground safely. There was no distribution of wreckage. The Aircraft sustained an unknown amount of damage when it impacted the trees, but the airframe fuselage and wings remained intact and the Aircraft continued to rest in the tree until it was removed by helicopter hoist on August 30, 2019.
