

Airplane incident

PIC - Rick Henson

Student pilot license [REDACTED]

Med 3rd Class 4/15/19

On 6/7 – 9:15 am approximately

Landed on runway 27 KGRD

Exited runway on Taxiway B

Turned left on taxiway A, continuing to FBO and planned taxi back to runway 27 for takeoff via taxiway C

Airport was full of parked planes for a fly in breakfast event.

As I proceeded to FBO and on to taxiway C, I was directed by a person to divert to taxiway A to the right

All along taxiway A were a number of parked planes on the left-hand side and further down the runway to the right. Also, planes parked and moving on the grass infield to the left.

Upon taxing down A, staying on the centerline, I didn't realize how close I was to the parked planes on the left whose noses were extend beyond the taxiway double yellow line

About a quarter of the way down the entrance of taxiway A, my left wing struck the nose of a parked plane, N964AC.

Upon contact, my plane spun quickly to left into the parked plane

I immediately applied full brakes, brought the throttle all the way back to avoid any more impact,

However, my plane continued until prop struck back stabilator of the other plane

Immediately shut down engine and exited plane to inspect damage

After inspection, plane was towed to tie down at KGRD
