Paul – We've amended the document to include the time that the data was available in our "over-the-air" receiver here at the office. The time directly below the image corresponds to the receive time of the image; the time in the image is the mosaic creation time.

Hope this helps.

Good afternoon Bob,

Are you able to get the upload times of the images you sent from say 2100 to 2200 UTC? Meaning the times that those images would have been available for viewing in the cockpit assuming "normal" upload times and such. And also assuming pilot had that imagery/data selected. Thanks!

Paul – Attached are the images. All times are CST. Let me know if you need anything further.

Regards [REDACTED]
