It flies.

Nice!

Squawks?

Air speed indicator
seems to be high stall
warning going off all the
time

All rather anytime
85MPH or below

All rather anytime
85MPH or below,.

Stall warning was
always too high I
thought

Wonder if there's Peto
static blockage

And it felt slow.

I think it's a combination
because it didn't feel like
it was stalling but it did
feel slow.
