

NATIONAL TRANSPORTATION SAFETY BOARD PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

This form to be used for reporting civil and public aircraft accidents and incidents

BASIC INFORMATION

Accident/Incident Location

Nearest City/Place: Mount Pleasant State: TN

ZIP: 38474 Country: USA

Latitude: 35-5543809 Longitude: -87.1791387

(Enter in decimal degrees or degrees:minutes:seconds)

Accident/Incident Date/Time

Date: 02/28/2020 Local Time: 3:30 pm

mm dd yyyy

Time Zone: CST

Collision with Other Aircraft: ☐ Midair ☐ On-ground ☒ None

AIRCRAFT INFORMATION

Registration Number: N79HA

Manufacturer: PIPER

Model: PA-28-140

Serial Number: 28-7425135

Year of Manufacture: 1973

Amateur-Built: ☐ Yes ☒ No If Yes: ☐ Kit/Plans ☐ Original Design Make: _____

☐ IFR-Equipped and Certified
☐ Commercial Space Flight
☐ Unmanned Aircraft

Maximum Gross Weight: 2150 lbs

Weight at Time of Accident/Incident: 1850 lbs

Number of Seats: 4 Flight Crew Seats: _____

Cabin Crew Seats: _____ Passenger Seats: _____

Number of Engines: 1

Category of Aircraft

- ☒ Airplane
☐ Balloon
☐ Blimp/Dirigible
☐ Glider
☐ Gyroplane
☐ Helicopter
☐ Powered Lift
☐ Rocket
☐ Ultralight
☐ Unknown

Type of Airworthiness Certificate

(Check all that apply)

Standard

DAMAGE TO AIRCRAFT AND OTHER PROPERTY

Aircraft Damage

- ☐ None ☒ Substantial
☐ Minor ☐ Destroyed
☐ Unknown

Aircraft Fire

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Fire at Unknown Time
☐ On-Ground ☐ Unknown

Aircraft Explosion

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Explosion at Unknown Time
☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

The nose gear collapsed and the left wing ~~had~~ had a crumple in it. The prop struck the ground and was dented. No damage to other property.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Larry Alves, fixed wing student and commercial pilot (rotorcraft) and instructor, Brennan Hoenes, took off from runway 35 (grass) at Maury County Regional Airport (KMRC) at 3:30pm for the purpose of soft-field takeoff training. The prevailing winds at the time were reported variable at 5 knots, but observed to be predominately from a heading 270. After taxiing to utilise the full length of the runway, full power was applied with 25 degrees of flaps set. The aircraft became airborne, we accelerated in ground effect, and began a slow climb. As the climb out was continued, the aircraft didn't make the expected power and climb performance for it's relatively light loading (300lbs front passengers, 0lbs aft passengers, 0lbs baggage, and approximately 30 gal fuel.)

As is the case with most aviation incidents, I strongly believe this negative outcome isn't a product of one singular thing

As the airplane's performance began to appear inadequate to clear the approaching power lines, Larry, who was at the controls, banked the airplane to the left and began a turn away from the power lines. The angle of bank was steeper than what I would have likely used and I instructed him to reduce the bank. I delayed about a second or two in grabbing the controls and immediately realised there wasn't enough energy in the system to get out of this situation. It seemed as though the airplane was continuing to perform worse.

While there were no explicit stall warning indications (no horn, light, stick shake, buffeting, etc.), it is conceivable (although unlikely) that we were in an accelerated stall at 50ft agl (the aircraft was no longer climbing at all). I promptly grabbed the controls, pushed forward, and tried to level the wings. At this point, the aircraft had nowhere to go. There were power lines ahead, and the nose was trending left towards the terminal. As the aircraft continued to lose altitude and the impact with the ground became imminent, I reaped back on the stick prior to impact in an effort to cushion the impact. The aircraft impacted the ground in a left-wing-low, nose-slightly down attitude.

We both exited the aircraft without injury and without damage to anything except the grass adjacent to the runway. The aircraft came to rest adjacent to runway 24 and the general aviation ramp.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Safety Recommendations:

Take way more runway than you think you need ... not just 2x (which I thought would be sufficient) but a lot more especially when with a student.

Don't hesitate to stop on a moderately soft field to a perform run-up or whatever you need to do, really.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

ADDITIONAL INFORMATION (Please type or print in ink)

Use this space if additional space is needed for any answers.

I have reviewed the SAIB you sent to me and thought it profoundly helpful. This is the only thing that REALLY makes sense so far. I was frustrated by the number of incidents that this carburetor has caused and even more frustrated by the tachometer indication of a green arc throughout the entire RPM range (seems deceiving if the carb is known for this icing issue).

I have spoken with our chief pilot and a safety briefing will be scheduled for our next all-instructor meeting (date TBD -- coronavirus) I will be presenting a safety briefing about what factors could have led to a different outcome. I will email you when that is complete.

I HEREBY CERTIFY THAT THE ABOVE INFORMATION IS COMPLETE AND ACCURATE TO THE BEST OF MY KNOWLEDGE
