

NATIONAL TRANSPORTATION SAFETY BOARD

NTSB Form 6120.1

PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

Email the pilot/operator aircraft accident/incident report to the investigator-in-charge of your accident/incident. If email is not available, mail the report per the instructions below.

If your accident/incident occurred in Maine, Vermont, New Hampshire, Massachusetts, Connecticut, Rhode Island, New York, New Jersey, Pennsylvania, Maryland, Delaware, Virginia, West Virginia, Kentucky, Tennessee, North Carolina, South Carolina, Mississippi, Alabama, Georgia, Florida, the District of Columbia, Puerto Rico, or the US Virgin Islands, send the form to: NTSB, ERA, 45065 Riverside Parkway, Ashburn, VA 20147.

If your accident/incident occurred in Ohio, Michigan, Indiana, Wisconsin, Illinois, Minnesota, Iowa, Missouri, Arkansas, Louisiana, North Dakota, South Dakota, Nebraska, Kansas, Oklahoma, Texas, Colorado, or New Mexico, send the form to: NTSB, CEN, 4760 Oakland Street, Suite 500, Denver, CO 80239.

If your accident/incident occurred in Montana, Wyoming, Idaho, Utah, Arizona, Nevada, Washington, Oregon, California, Hawaii, or the territories of Guam or American Samoa, send the form to: NTSB, WPR, 505 South 336th Street, Suite 540, Federal Way, WA 98003.

If your accident/incident occurred in Alaska, send the form to: NTSB, ANC, 222 West 7th Avenue, Room 216, Box 11, Anchorage, AK 99513.

Rules pertaining to notification of aircraft accidents and incidents, as well as overdue aircraft are found in 49 *Code of Federal Regulations* (CFR) Part 830 http://www.ecfr.gov/cgi-bin/text-idx?c=ecfr&tpl=/ecfrbrowse/Title49/49cfr830_main_02.tpl. These rules state the authority of the NTSB, define accidents, incidents, injuries, and other terms, and provide procedures for initial and immediate notification of accidents and incidents by aircraft pilots/operators.

A. APPLICABILITY

The pilot/operator of an aircraft shall send a report to the office listed above, based on accident/incident location; immediate notification is required by 49 CFR 830.5(a). **The report shall be filed within 10 days after an accident for which notification is required by Section 830.5, or after 7 days if an overdue aircraft is still missing.**

An aircraft accident, as defined in 49 CFR 830.2, is determined as an occurrence that involves a fatality or serious injury, or substantial damage to the aircraft. For occurrences that do not involve a fatality, the determination that the occurrence is an accident can be appealed by writing to the Director, Office of Aviation Safety, NTSB, 490 L'Enfant Plaza, S.W., Washington, D.C. 20594.

INSTRUCTIONS TO PILOTS/OPERATORS FOR COMPLETING THIS FORM

It is necessary that ALL questions on this report be answered completely and accurately.

If more space is needed, continue on a blank sheet of paper.

Nearest City/Place: Use the name of the nearest community in the state where the accident/incident occurred.

Date/Time: Indicate the date and local time of the event. Be sure to indicate the time zone.

Phase of Operation: Indicate the phase of operation during which the accident/incident occurred.

Aircraft Information: Enter aircraft make and model information as indicated on the aircraft registration certificate, including series. If the involved aircraft is certified as "amateur-built," include the name of the producer of the kit or plans, unless an NTSB employee instructs otherwise.

Maximum Gross Weight: Enter the certificated maximum gross weight for the aircraft involved in the occurrence. This should be the same as the maximum gross weight indicated on the aircraft weight and balance documents.

Engine: Enter engine make and model information as indicated on the engine data plate.

The NTSB uses this form for aircraft accident prevention activities and for statistical purposes. NTSB regulations (49 CFR Part 830) require that **ALL** questions be answered completely and accurately. Completion of this form will take approximately 60 minutes. The NTSB does not guarantee the privacy of any information provided in this form. You need not complete this form unless it displays a valid OMB control number, in accordance with 5 C.F.R. § 1320.5(b), which applies to this collection of information.

B. DEFINITIONS

1. "Aircraft Accident" means an occurrence associated with the operation of an aircraft that takes place between the time any person boards the aircraft with the intention of flight and all such persons have disembarked, and in which any person suffers death, or serious injury, or in which the aircraft receives substantial damage. For purposes of this form, the definition of "aircraft accident" includes "unmanned aircraft accident," as defined at 49 CFR 830.2.

2. "Substantial Damage" means damage or failure that adversely affects the structural strength, performance or flight characteristics of the aircraft, and that would normally require major repair or replacement of the affected component. NOTE: Engine failure or damage limited to an engine if only one engine fails or is damaged, bent fairing or cowling, dented skin, small puncture holes in the skin or fabric, ground damage to rotor or propeller blades, and damage to landing gear, wheels, tires, flaps, engine accessories, brakes, or wing tips are not considered "substantial damage" for purposes of this report.

3. "Operator" means any person who causes or authorizes the operation of an aircraft, such as the owner, lessee, or bailee of an aircraft.

4. "Fatal Injury" means any injury that results in death within thirty (30) days of the accident.

5. "Serious Injury" means any injury that (1) requires hospitalization for more than 48 hours, commencing within 7 days from the date the injury was received; (2) results in a fracture of any bone (except simple fracture of fingers, toes, or nose); (3) causes severe hemorrhages, nerve, muscle, or tendon damage; (4) involves injury to any internal organ; or (5) involves second- or third-degree burns, or any burns affecting more than 5 percent of the body surface.

Type of Fire Extinguishing System: If a fire extinguishing system was used to fight an aircraft fire, specify the type(s) of extinguishing system(s) used. Examples include handheld extinguisher, engine fire bottle, cargo/baggage compartment fire suppression system, or airport emergency ground equipment.

Owner/Operator Information: Enter the owner information as shown on the registration certificate. Commercial operators, enter the operator information, including "doing business as" when applicable, as shown on the operator certificate.

Revenue Sightseeing Flight: Indicate whether the accident aircraft was conducting **revenue** sightseeing operations under 14 CFR Part 91 at the time of the accident.

Air Medical Flight: Indicate whether the accident flight was being conducted for the purpose of carrying medical personnel, patient(s), or organs.

Public Aircraft: Federal, state or local government flight operations such as official travel, law-enforcement, low-level observation, aerial application, firefighting, search and rescue, biological or geological resource management, or aeronautical research. Indicate whether the flight was conducted by the armed forces, federal, state, or local government.

Purpose of Flight: 14 CFR Parts 91, 103, 133, 136, and 137: Indicate the type of operation that was being conducted at the time of the occurrence using the following definitions:

AERIAL APPLICATION--Operations using an aircraft to perform aerial application or dispersion of any substance. Examples include agricultural, health, forestry, cloud seeding, firefighting, insect control, etc.

AERIAL OBSERVATION--These flights include aerial mapping/photography, patrol, search and rescue, hunting, highway traffic advisory, ranching, surveillance, oil and mineral exploration, criminal pursuit, fish spotting, etc.

AIR DROP--Aerial operations, other than aerial application, that are intended to release items in flight.

AIR RACE/SHOW--Includes any flight operations conducted as part of an organized air race or public demonstration.

BUSINESS--includes all personal flying without a paid professional crew for reasons associated with furthering a business, including transportation to and from business meetings or work. This does not include corporate/executive operations, air taxi, or commuter operations.

EXECUTIVE/CORPORATE--Company flying with a paid, professional crew.

FERRY--Non-revenue flight under a special flight or "ferry" permit. Refer to 14 CFR 21.197 for details of special flight permit issuance.

FLIGHT TEST--Flight for the purpose of investigating the flight characteristics of an aircraft/aircraft component or evaluating an applicant for a pilot certificate or rating.

INSTRUCTIONAL--Flying while under the supervision of a flight instructor or receiving air carrier training. Personal proficiency flight operations and personal flight reviews, as required by federal air regulations, are excluded.

OTHER WORK USE--Miscellaneous flight operations conducted for compensation or hire such as construction work (not 14 CFR Part 135 operation), parachuting, aerial advertising, towing gliders, etc.

PERSONAL--Flying for personal reasons (excludes business transportation) including pleasure or personal transportation. This also includes practice or proficiency flights performed under flight instructor supervision and not part of an approved flight training program.

POSITIONING--Non-revenue flight conducted for the primary purpose of relocating the aircraft. Examples include moving the aircraft to a maintenance facility or to load passengers or cargo etc.

UNKNOWN--Use only if the primary purpose of flight is not known.

Other Aircraft--Collision: For all accidents involving a collision with another aircraft, including parked aircraft, check "Collision with other aircraft" under Basic Information and complete this section indicating details about the OTHER aircraft involved in the collision.

Airport Information: Complete this section if the accident/incident occurred on approach, landing, takeoff, departure, or within 3 statute miles of an airport. Please refer to the FAA Airport/Facility Directory or other official source for airport information.

Airport Identifier: Provide the official 3 or 4 character airport identifier number.

Runway: Indicate the number of the runway used, including L, R, or C if applicable.

Runway/Landing Surface: Indicate the type of intended runway/landing surface (do not indicate surface conditions). If the surface type was mixed, check all that apply.

Condition of Runway/Landing Surface: Indicate the condition of the intended runway/landing surface. If multiple conditions existed at the time of the accident, check all that apply.

Weather Information at the Accident/Incident Site: Indicate the weather conditions reported at the accident/incident site at the time of occurrence. If no weather reporting was available for the accident/incident site, indicate the reported conditions at the nearest reporting site. Specify the weather reporting site identifier, the observation time, and distance from the accident/incident.

Sky/Lowest Cloud Condition: Indicate the height above ground level of the lowest cloud condition present at the time of the accident/incident and whether coverage was reported as few, scattered, broken or overcast. Also indicate the height above ground level and coverage of the lowest cloud ceiling present at the time of the accident/incident (reported as broken or overcast).

NOTAMs (D and FDC), AIRMETs, SIGMETs, PIREPs: Describe all NOTAMs (distant (D) or Flight Data Center (FDC), if known), AIRMETs, SIGMETs, and PIREPs in effect near the accident/incident.

Flight Crewmember Information: Indicate the category that best describes the capacity served by this flight crewmember at the time of the accident. The designators "Flight Crewmember 1" and "Flight Crewmember 2" do not refer to a specific pilot position or responsibility. If more than one pilot is aboard, they may be entered in any order and their capacity entered as appropriate.

Degree of Injury: See Definitions on the top half of Page 1 of the instructions. Minor injury is not defined. If an injury does not meet the criteria for another injury category, select Minor.

Date of Last Flight Review or Equivalent: Enter the date of the most recent flight review, or equivalent, completed by this pilot. Refer to 14 CFR 61.56 for accepted equivalents.

Type Ratings: List all type ratings on the pilot certificate. If the pilot holds no type ratings indicate "none." If the pilot holds a pilot certificate other than student and was flying an aircraft requiring an endorsement, enter the type and date of any logbook endorsement(s) for that aircraft. See 14 CFR 61 for examples of required endorsements.

Student Endorsements: If the pilot holds a student pilot certificate, enter all solo endorsements and dates on the student pilot certificate.

Flight Time: Complete the flight time matrix. Solo flight time should be included as "Pilot-in-Command (PIC)" and all dual flight instruction given should be included as "Time as Instructor."

Additional Flight Crewmembers: Complete this section if there were more than two required flight crewmembers on the aircraft. This also includes a check airman performing official duties but does not include cabin crew. State the capacity served by each included crewmember at the time of the accident.

Passenger(s)/Other Personnel: Enter identification and injury severity information for all passengers, cabin crew, and other personnel involved in the accident. See Page 1 of the instructions for the official definition of injury levels.

Several questions throughout the form allow for multiple responses; when appropriate, choose all responses that apply.

These instructions only pertain to major issue areas covered by NTSB Form 6120.1 Pilot/Operator Aircraft Accident/Incident Report. For additional definitions of questions and responses, please refer to www.nts.gov.

☒ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Aircraft crashed into tree then impacted the ground. Aircraft ignited in flames and destroyed the cabin of the aircraft. A fence was also damaged in the crash.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

My neighbor, Joseph Issac, and I were planning on taking his son, Jason, on a surprise flight for his birthday. We decided to schedule the flight for Thursday, December 17th, 2020 at 1400. The week preceding the flight I started monitoring the weather outlook on the television and via my cellular phone using the "Wunderground" and "The Weather Channel" applications. I completed a weight and balance and verifying I was within the weight and CG envelope limits. The empty weight and balance of 1649lbs and 38.34" was obtained from a current weight and balance sheet from within the aircraft. The aircraft had approximately 50 gallons of fuel in the tanks, I weigh 225 pounds, Jason weighs 72 pounds, Jocelyn weighs 74 pounds, and Joseph weighs 198 pounds. There was 5 pounds in the luggage area. This gave me a weight of 2523 pounds and a balance of 44". I estimate a minimum of 2 gallons of fuel use for engine warm-up, safety briefing, obtaining IFR clearance, obtaining ATIS, taxi, run-up, and holding for IFR release which would put the max take off weight of the aircraft at 2511 pounds.

On Thursday, December 17th, 2020, I logged onto www.1800WXBRIEF.com and received a standard briefing and copied down the pertinent information as it pertains to notams and weather. The weather forecast looked good for the flight. There were some clouds I may come across during the flight, so I decided to file an IFR flight plan using Foreflight. I then viewed a weather brief on Foreflight at 1439 hours. The briefing confirmed there was a convective sigmet in the area and a cold front moving into the area. The metar for KHWO indicated winds = 270 at 10 knots, visibility = 10sm, clouds = few at 2,700, scattered at 3,400, broken at 4,800, temperature = 27, dew point = 22, and pressure = 30.02. This indicated the field was VFR conditions. The metar at KMTH indicated winds = 290 at 5 knots, visibility = 10sm, clouds = clear, temperature = 27, dew point = 22, and pressure = 30.02. This indicated the field was VFR conditions. At approximately 1515 hours, I departed my residence in Coral Springs, FL with my neighbor, Joseph, and his two children, Jason and Jocelyn to head to KHWO. Once we arrived at KHWO we proceeded to the TB-10 aircraft (N5547Y) and I started a pre-flight inspection of the aircraft. The pre-flight inspection was completed using a TB-10 checklist to verify all items were checked. During the pre-flight, all aircraft lights were operational, the control surfaces were free and clear, the wheels were properly inflated with no indication of leaking brake fluid. The wings were checked, the flaps and ailerons were in proper working order, the engine compartment was checked and there were no foreign objects seen, the oil level indicated above 7 quarts on the dip stick. The fuel was drained at all three drainage points and was free of any water and debris. I showed Joseph the fuel and explained to him the reasoning for checking the fuel and the different fuel types used in aviation. Both fuel tanks were almost full of fuel. I then had Jocelyn enter the aircraft and sit in the second row on the left side of the aircraft. Joseph entered the aircraft next and sat in the second row on the right side of the aircraft. Both Joseph and Jocelyn properly fastened and tightened their seatbelts. I then had Jason enter the aircraft and sit in the front row on the right side of the aircraft. I placed his seatbelt on him including the shoulder strap and properly tightened it. I then closed and secured the right side aircraft door. I entered the aircraft and placed my seatbelt on and continued with my "Before starting Engine" checklist. Once completed, I started the engine without any issues. Oil pressure was within green sector and engine was set to 1000 RPM.

I turned on electronic equipment and went over a safety briefing with everyone to include seatbelts, exits, and a sterile cockpit within the airport environment. I also discussed the potential for light turbulence while enroute. I then contacted the KHWO ground controller to activate my IFR flight plan. I was advised I was cleared to KMTH via the Miami 6 departure with the MNATE transition and a climb to 2,000' and expect 3,000'. I was also asked if I was familiar with the Sheridan Departure in which I responded I was and could accept. I input the route in my foreflight map and also into the Garmin 430 installed in the aircraft. I then received the ATIS and copied down the current conditions and adjusted my altimeter to the proper setting. I believe the ATIS information received was "Romeo". I contacted the KHWO ground controller once again to receive my taxi clearance from Hollywood Aviation to the active runway. I was told to taxi to Runway 28L via "L" and cleared to cross Runway 1R. I proceeded as advised checking my brakes and instruments (Compass, Directional Gyro, Turn Coordinator) along the way and stopping prior to entering runway 28L to complete my "engine run up" checklist. I completed the engine run up using the TB-10 checklist. All engine gauges (oil temp, oil pressure, fuel pressure) were in the green. The fuel selector switch was switched to the right wing. The engine was brought up to 2,000 RPMs and the prop was cycled with no issues. I then checked the magnetos. I checked the left magneto first and had a drop of 75 RPMs, I then checked the right magneto and also had a drop of 75 RPMs. The magneto check was within indicated acceptable measures and there were no issues. ****CONTINUED ON PAGE 11****

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)

Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No
(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

I was able to force my way out of the left side of the aircraft by kicking and punching the side window. I noticed Jason and Jocelyn were both still inside the aircraft struggling to get their seatbelts off. I entered back into the aircraft and assisted both out of their seatbelts and out of the aircraft. A few seconds later, I observed Joseph had already exited the aircraft by unknown means on the right side of the aircraft.

****CONTINUED FROM PAGE 9****

The carburetor heat was turned on and there was a small decrease in RPMs which quickly returned when the carburetor heat was turned off. The engine was then throttled up to 2,700 RPMs with no issue. Once run up was complete I advised the KHWO ground controller and awaited my IFR release from Miami. Due to having to wait for my IFR release, I leaned the mixture due to the engine idling at 1200 RPM to reduce spark plug fouling and set up the aircraft for take-off configuration utilizing my TB-10 checklist. The flaps and trim were set to take-off, magnetos were confirmed on both, propellor control was full forward, carburetor heat was off, fuel pump was turned on, and all engine gauges and voltmeter showed in the green.

I received my IFR release a few minutes later and was told to contact KHWO tower controller. Once on tower's frequency, I was cleared to take off on runway 28L. I rechecked the "Take-Off checklist" and I moved the mixture lever to full rich and taxied onto and aligned up with runway 28L. I then applied full throttle and kept my right hand over the levers making sure all levers (carburetor heat, throttle, prop control, and mixture) remained in proper positions as I accelerated up to the rotation speed of 65KIAS. During acceleration, all engine gauges were in the green sectors. I obtained 65 knots within normal take off distance and then rotated without any issues and pitched for 73 knots for climb out. At approximately 100' off the ground and at 73 knots, the aircraft would no longer gain any altitude and my airspeed started to bleed off. The stall warning then started to sound and I had a significant loss of power output from the engine which prevented me from gaining altitude or increasing my airspeed. I attempted to maintain 70 knots per the emergency "engine failure immediately after takeoff" checklist but was unable due to losing altitude quicker and possibly not being able to clear the buildings immediately in front of me. I focused on my airspeed indicator and made small pitch adjustments to keep the aircraft from falling below 65 knots and stalling. My right hand was still on the throttle, propellor control, mixture and carburetor heat levers which were all full forward. I raised the flaps and continued to adjust my pitch in an attempt to gain airspeed to prevent a stall as I struggled to keep the airspeed from going below 65 knots or maintain altitude. I continued to slowly lose altitude and was unable to turn back toward the airfield for a landing.

From my personal experience from taking off from KHWO and working in the area for the last fifteen years, I determined the best place to try to land would be in a park located just north of Pembroke RD and just east of Jodi Ln. I initiated a very small left bank as soon as I experienced a loss in power in the engine to avoid the multistory buildings immediately to the west of the airfield and to position myself just north of Pembroke Rd to line the aircraft up with the park. Due to the attitude of the aircraft and the high dash of the TB-10, I was unable to see ahead of the aircraft, but I was able to see my approximate location out the left side window and determined I was over the park, so I leveled the wings. Seconds later, I was approximately 20' in the air trying to slowly descend within the park when the aircraft collided into a tree, and then impacted with the ground and a fence. Immediately after impacting the ground the aircraft became engulfed in flames. I was able to force my way out of the left side of the aircraft by kicking and punching the side window. Once I got out of the aircraft, I noticed Jason and Jocelyn were both still inside the aircraft struggling to get their seatbelts off. I entered back into the aircraft and assisted both out of their seatbelts and out of the aircraft. I then looked around for Joseph and did not locate him inside the aircraft. A few seconds later, I observed Joseph had already exited the aircraft by unknown means on the right side of the aircraft.

Miramar and Pembroke Pines Police and Fire-Rescue responded, and all aircraft occupants were transported to Memorial Regional in serious condition as trauma alerts and later all transferred to the Ryder Trauma Center in Miami due to sustaining extensive burns.

I HEREBY CERTIFY THAT THE ABOVE INFORMATION IS COMPLETE AND ACCURATE TO THE BEST OF MY KNOWLEDGE
