Date Report Received
3/10/2021

February 26, 2021

On Friday, February 26, 2021, I left Lantana Airport in a C-172 at around 2:10pm with a student for an instructional flight. About ten minutes into the flight we started some ground reference maneuvers at 1000 feet. I instructed my student to hold the altitude and he followed instructions. Shortly afterwards I noticed that he had lost about 100 feet in altitude. I asked him to apply more power to climb to assigned altitude, which he did, but we did not climb.

I took over the controls as the engine had lost power and it was not responding. I immediately went through emergency procedures but was not able to restore power to the engine. At that point we were descending at gliding speed and I looked for and found a suitable strip to land. As we were about to touch down, unfortunately, the right wheel hit a small post on the ground, and as result, the airplane spun.

Fortunately, we made a safe landing, but there was damage to the right wheel, right wing, and right tail, as far as I could see. The FAA was notified and is investigating the cause of the engine failure.

Amir Hossein Zargar Amini
