NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

We were flying from Savannah (KSAV) to Pensacola (KPNS) on VFR flight following. We changed altitudes from 6500' to 4500' to try to find lower headwinds after I noticed our GS was 103 knots with a TAS of 170 knots. The GS was improved at 4500' to about 120 knots. I thought that was unusual given we were cruising at 31" MP and 2350 rpm. TIT was 1450 F with CHT's 370-390 F. I was wondering if I was getting correct MP readings. We just seemed sluggish. I was burning a lot of fuel due to the high headwinds so I started scoping out potential airports for refueling. I mentioned to my wife that KMAI seemed to be the nearest option. This was at about 12:30.

At about 12:40 I noticed the TIT warning light illuminated which was very odd since it requires temperatures of 1650 F. I again checked the mixture, throttle and pitch controls and all looked normal. This was either an electrical problem of the TIT sensor was picking up something that I couldn't determine.

At 12:45 minutes later the autopilot kicked off in relatively calm weather. The AP unit said "AP FAIL", which was highly odd. It could not be recycled so I hand-flew the aircraft for a few minutes.

Within 5 minutes the Garmin GNS-530 unit went off. This was quickly followed by the transponder and EDM gauge. I was already using NAV/COM 2. I announced to ATC that we were going to land at KMAI with electric problems. I heard a faint acknowledgment that I was unsure of, something like radar service terminated? I glanced at the ammeter a few moments earlier and it seemed normal. So I was thinking there was a short in the system. I switched to CTAF to announce my situation.

I throttled back to descend and turned north to enter a left downwind pattern. I lowered the landing gear, heard a reassuring "thump" as usual and dropped 10 degrees flaps. Turning to the base leg the wind was heavy. We were crawling along at 25" MP and IAS about 90 knots. I presumed the gear were locked in the down position as there were no indication lights but I decided to treat the situation as gear lock in question. So I would apply no brakes and let the aircraft roll to a slow speed.

Turning to final I waited to get closer to the runway to drop full flaps and crabbed at 25 degrees starboard. IAS was now 80 knots.

The approach was fairly normal and I flared properly, heard the stall warning (which sounded like it was dying). This odd tone can be heard in the video.

After a normal 2-point landing the nose wheel settled. I applied no brakes as per the manual when in doubt of gear lockdown. Then we tilted to the right and I pushed left on the rudder, which was followed by another tilt to the left, which told me the main gear collapsed. We started skidding off the runway to the left, but not at an alarming speed. I told everyone to brace and get out after we stopped.

There was no indication of fire or smoke or odor. We stood clear of the aircraft for a few minutes. Then we grabbed our gear from the cabin.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

No suggestion at this time; annual inspection was completed the prior week and the plane ran perfectly on the trip from KDWH to KSAV on March 14, 2021.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)

Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No
(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Main landing gear collapsed on landing (Cessna manufacturer);

EVACUATION OF AIRCRAFT

Was an emergency evacuation of the aircraft performed? ☒ Yes ☐ No

Method of Exit – Describe how the occupants exited and how many occupants evacuated each location

All three passengers exited the aircraft using the left pilot's door. The emergency door on the right was tilted upward since the aircraft came to rest on a left angle. Since there was no fire or leaking fuel, we all exited the pilot's door in a routine fashion. First the pilot, then passenger in right front seat, then we pulled the pilot seat forward to allow the aft passenger to egress.
