Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

The left wing tip inboard to approximately the third rib, right wing tip inboard to approximately the third rib, propeller, engine sudden stoppage, engine mounts, engine cowling, nose landing gear separated from aircraft, firewall damaged on pilots side.

One runway marker light broken off.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

After detailing preflight procedures the student and I were secured in the aircraft and talked about the instrument layout and what each one was. I talked him through the starting procedure and then had him assist in starting the aircraft. After initial start-up, I talked him through and assisted in the avionics set-up and then we obtained the AWOS information and talked about which runway to use. I had the student follow me on the controls to taxi the aircraft and after demonstrating how to taxi, had him taxi the aircraft to runway 17. At the hold short line we completed the aircraft run-up and talked about how to perform the take-off maneuver. I instructed the student that he would not be performing the take-off by himself and that he would be on the controls with me. I instructed him to keep his heels on the floor and to rest his toes on the bottoms of the pedals. I had the student increase the engine power to being the takeoff roll and as the aircraft was increasing speed, I reminded him to keep his heels on the floor and just after the aircraft reached 40 kias, the aircraft veered sharply to the left. I immediately put pressure on the right pedal and told him that I had the flight controls. With all the pressure on the right pedal the aircraft would still not come back towards the runway heading, and was still headed off the runway. At the angle the aircraft was headed off the runway towards the grass and a ditch, I knew that there was no way to slow the aircraft in time to not hit the embankment with significant speed and force so I decided the best course of action was to get the aircraft to fly and I pulled back on the yoke and the aircraft lifted off. Shortly after the aircraft lifted off it came into contact with a runway light and the left wingtip dipped and contacted the ground. the aircraft then settled to the ground in a side slipping angle and the nose-gear broke free from the aircraft and then the prop struck the ground. The aircraft skidded sideways and the right wingtip contacted the ground and the aircraft continued to slide until contacting a small embankment adjacent to the runway in a wing level nose down attitude. I immediately check on the condition of the student for injuries and he had none. I ensure that the airplane fuel and electrical was secured and then we exited the aircraft.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Ensure that the student pilot completely understands the proper operation and use of the rudder pedal/brake combination.
