

RECORD OF INTERVIEW

Daniel P. Boggs
Air Safety Investigator
National Transportation Safety Board
Office of Aviation Safety - Eastern Region

Date: 9/13/2021 @ 1100 EST
Person Interviewed- James Jacobi – Pilot
NTSB Case Number: ERA21LA350

Narrative:

Mr. James Jacobi was interviewed by telephone.

Mr. Jacobi stated the flight was uneventful from Indiana to Naples. The landing was normal, and brakes were functioning on touch down. Shortly after he applied brakes, the braking faded away and he could not slow the airplane down. He was pushing hard on the pedals, and they felt normal but the airplane did not slow down. The brakes would momentarily grab, lock-up for a few feet and release, the brakes did this several times. He further stated he directed the airplane off the runway at the end and turned to the right to miss a blast deflector. The nose landing gear and right main landing gear fractured off.
