

MEMORANDUM

Daniel P. Boggs
Air Safety Investigator
National Transportation Safety Board
Office of Aviation Safety - Eastern Region

Subject: FAA Statement, excerpt from email.

Per your request:

Aircraft landed on runway 23 at Naples Municipal Airport (APF). Per aircraft pilot (Mr. Jacobi), wheel brakes locked upon landing causing aircraft to run off the runway. The aircraft rested at the far end of the runway in the grass area after the accident.

Damage noted during our investigation:

Nose Gear Collapsed and Damaged – Nose landing gear tore-off from aircraft during accident, internal structural damage inside nose gear wheel well.

Main Landing Gear (Right) collapsed and destroyed during impact, Main Landing Gear (Left) sustained damage.

Since aircraft skidded on its undercarriage, it caused substantial damage to both left and right wings, nose of aircraft sustained substantial damage.

Due to the nature of this accident, there is a possibility that the aircraft has internal structural damage.
