

MEMORANDUM

Daniel P. Boggs
Air Safety Investigator
National Transportation Safety Board
Office of Aviation Safety - Eastern Region

Subject: email question to pilot.

An email was sent to the pilot on January 20, 2021 asking him about the flaps and dump system during landing on the accident flight.

The pilot responded as follows on the same date:

I do remember running the check list before landing and all items were complete. If I remember correctly, the flap handle was in the "full down position" as I had to raise the flaps to get the right power lever into the shut off detent. I believe the lift dump handle was in the deployed position when I evacuated everyone out of the aircraft.
