

MEMORANDUM FOR RECORD

Douglass Brazy
Air Safety Investigator
Eastern Region Aviation

November 16, 2021

Subject: NTSB investigation ERA21LA018, N668CL, experimental amateur built Z-HI-MAX 1400, October 16, 2021, Benton Airport (PA40), Benton, Pennsylvania.
Follow-up Information provided by pilot Joe Farwell

On November 16, 2021, Mr. Farwell provided the following information via email:

The airplane was equipped with carburetor heat, and its testing/operation of the carburetor heat is part of the normal engine run-up procedure performed prior to takeoff. He did not have any recollection of that portion of the flight, and therefore could not confirm if it had operated properly. He noted that his brother checked the operation of the carburetor heat mechanism after the accident, and it appeared to operate normally.
