Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Right Main landing gear detached from the airframe. Left main wheel detached. Lower front cowling damaged.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

20 miles out, I had received the AWOS-3 reading stating calm winds and elected to land runway 31 at MTV. We set up for a straight in landing to runway 31. I descended from 3000 feet on the VASI at a forward speed of 75 mph. As we descended I placed the prop lever to high achieving 3000rpms and 15" manifold pressure. I selected flaps 15, then Flaps 30 on short final. As we had runway assured I placed the aircraft in a landing attitude to land in a three wheel landing. Once the landing gear made contact I started to apply breaks evenly. During roll out, the aircraft started to indicate a left turn and I started breaking with right break, and left aileron. The airplane started to turn more and I added additional break pressure until I had placed all my force to get the plane turned back straight. As the plane turned left and departed the runway, I had corrected for the left turn and had the plane moving in a straight direction, the aircraft had left the runway, however I was not concerned about ground clearance. Although the airplane left the runway, I figured stopping on the grass was a safe option. As the aircraft was going left I noticed the where the grass had been overgrown and was not concerned of going into high grass, then all of a sudden the airplane fell straight down. The subsequent damage was a result of the impact from going over a 8 foot ditch, only 139 - 175 feet from the edge of the runway. When ground personnel showed up they stated there was 8 knots of wind they read at the time of the event. I believe that there was a wind gust at the time of landing that caused the aircraft to yaw left and my actions corrected for the instant yaw. If there was not a ditch located at the left of the runway I believe the aircraft would not have sustained any damage at all and we would have taxied back to the FBO.
