NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On Monday, 29 Nov 2021, I arrived at Destin Executive airport to fly from Destin, FL (KDTS) to Habersham County Georgia Airport (KAJR) in a Piper Meridian Malibu PA-46-500TP, Tail N172MA, owned by N172MA LLC. Destin FBO crew pulled the N172MA out of the hangar and over to the south side of the Destin North FBO. The aircraft had been fully fueled the night prior. Upon walk around I noticed the need for approx. 1 quart of oil and that the right strut appeared lower than the left strut by approx. 1 inch. I called a mechanic that does a significant amount of maintenance work for Brian Scalise, manager for PBS Aviation LLC. He inspected the aircraft struts and noted the right strut had a very small leak and will need to be serviced in the near future, but is good for flight. He also added the quart of oil to the engine. Upon continuation of the walk around, I noted no issues with the aircraft.

Weather was clear with light winds. At approximately 1210, I started up and taxied to runway 32 at KDTS uneventfully. Upon initial takeoff roll, I noted an aircraft pull to the left, but equated that to the acceleration of the engine and aircraft and readily countered the pull with right rudder. Lift off and flight to Habersham County was uneventful and as planned. IFR at FL 250. Weather was clear.

I requested the RNAV to runway 06 at Habersham from Atlanta Center. KAJR is an uncontrolled airport. The winds were reported as calm with sky clear. The runway was dry. Atlanta Center was very busy and could not support the approach so I cancelled and flew visually to runway 06. I was on speed 120 kts and on glide path approximately 1/4 mile from final before slowing and transitioning to a normal landing. I was on speed and on centerline when the main wheels touched down, followed very shortly thereafter by the nose wheel. What felt to be near simultaneously with the nosewheel touchdown, the aircraft pulled significantly to the left. I countered with a small right rudder correction to offset the pull and the aircraft responded by traveling to the right. I was just to the right of centerline when I eased off the right rudder correction. The aircraft pulled again to the left but this time with even more aggression. I countered the left pull with right rudder again to bring it back to centerline. When I relaxed right rudder when the aircraft was just right of centerline, the aircraft pulled very aggressively to the left. Throughout this whole landing roll, the aircraft seemed to pull aggressively to the left but travel smoothly to the right. I pulled throttle to beta and applied both brakes and right rudder to counter the very aggressive pull to the left but I couldn't stop the leftward pull of the aircraft. The aircraft departed the runway to the left about halfway down runway 06, in the vicinity of 'C' taxiway. At that same area, on the left side of the runway, there is a large ditch with a cement drainage pipe. I didn't know this ditch and pipe were there, did everything I could to avoid the ditch, but had little control of the aircraft once it left the prepared surface. The aircraft came to an abrupt stop approximately 20 yards to the left of runway 06 and approximately half way down the length of the runway.

Immediately upon coming to a stop, I shut off the engine, electric, and fuel and quickly assessed the situation. I assessed the area by the exit door and noted there was no fire. The left aircraft wing was broken, I was able to only open the upper exit door due to the left wing obstructing the lower aircraft two-part door. Habersham County fire & rescue was on the scene very quickly.
