

NATIONAL TRANSPORTATION SAFETY BOARD

NTSB Form 6120.1

PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

Email the pilot/operator aircraft accident/incident report to the investigator-in-charge of your accident/incident. If email is not available, mail the report per the instructions below.

If your accident/incident occurred in Maine, Vermont, New Hampshire, Massachusetts, Connecticut, Rhode Island, New York, New Jersey, Pennsylvania, Maryland, Delaware, Virginia, West Virginia, Kentucky, Tennessee, North Carolina, South Carolina, Mississippi, Alabama, Georgia, Florida, the District of Columbia, Puerto Rico, or the US Virgin Islands, send the form to: NTSB, ERA, 45065 Riverside Parkway, Ashburn, VA 20147.

If your accident/incident occurred in Ohio, Michigan, Indiana, Wisconsin, Illinois, Minnesota, Iowa, Missouri, Arkansas, Louisiana, North Dakota, South Dakota, Nebraska, Kansas, Oklahoma, Texas, Colorado, or New Mexico, send the form to: NTSB, CEN, 4760 Oakland Street, Suite 500, Denver, CO 80239.

If your accident/incident occurred in Montana, Wyoming, Idaho, Utah, Arizona, Nevada, Washington, Oregon, California, Hawaii, or the territories of Guam or American Samoa, send the form to: NTSB, WPR, 505 South 336th Street, Suite 540, Federal Way, WA 98003.

If your accident/incident occurred in Alaska, send the form to: NTSB, ANC, 222 West 7th Avenue, Room 216, Box 11, Anchorage, AK 99513.

Rules pertaining to notification of aircraft accidents and incidents, as well as overdue aircraft are found in 49 *Code of Federal Regulations* (CFR) Part 830 http://www.ecfr.gov/cgi-bin/text-idx?c=ecfr&tpl=/ecfrbrowse/Title49/49cfr830_main_02.tpl. These rules state the authority of the NTSB, define accidents, incidents, injuries, and other terms, and provide procedures for initial and immediate notification of accidents and incidents by aircraft pilots/operators.

A. APPLICABILITY

The pilot/operator of an aircraft shall send a report to the office listed above, based on accident/incident location; immediate notification is required by 49 CFR 830.5(a). **The report shall be filed within 10 days after an accident for which notification is required by Section 830.5, or after 7 days if an overdue aircraft is still missing.**

An aircraft accident, as defined in 49 CFR 830.2, is determined as an occurrence that involves a fatality or serious injury, or substantial damage to the aircraft. For occurrences that do not involve a fatality, the determination that the occurrence is an accident can be appealed by writing to the Director, Office of Aviation Safety, NTSB, 490 L'Enfant Plaza, S.W., Washington, D.C. 20594.

INSTRUCTIONS TO PILOTS/OPERATORS FOR COMPLETING THIS FORM

It is necessary that ALL questions on this report be answered completely and accurately.

If more space is needed, continue on a blank sheet of paper.

Nearest City/Place: Use the name of the nearest community in the state where the accident/incident occurred.

Date/Time: Indicate the date and local time of the event. Be sure to indicate the time zone.

Phase of Operation: Indicate the phase of operation during which the accident/incident occurred.

Aircraft Information: Enter aircraft make and model information as indicated on the aircraft registration certificate, including series. If the involved aircraft is certified as "amateur-built," include the name of the producer of the kit or plans, unless an NTSB employee instructs otherwise.

Maximum Gross Weight: Enter the certificated maximum gross weight for the aircraft involved in the occurrence. This should be the same as the maximum gross weight indicated on the aircraft weight and balance documents.

Engine: Enter engine make and model information as indicated on the engine data plate.

The NTSB uses this form for aircraft accident prevention activities and for statistical purposes. NTSB regulations (49 CFR Part 830) require that **ALL** questions be answered completely and accurately. Completion of this form will take approximately 60 minutes. The NTSB does not guarantee the privacy of any information provided in this form. You need not complete this form unless it displays a valid OMB control number, in accordance with 5 C.F.R. § 1320.5(b), which applies to this collection of information.

B. DEFINITIONS

1. "Aircraft Accident" means an occurrence associated with the operation of an aircraft that takes place between the time any person boards the aircraft with the intention of flight and all such persons have disembarked, and in which any person suffers death, or serious injury, or in which the aircraft receives substantial damage. For purposes of this form, the definition of "aircraft accident" includes "unmanned aircraft accident," as defined at 49 CFR 830.2.

2. "Substantial Damage" means damage or failure that adversely affects the structural strength, performance or flight characteristics of the aircraft, and that would normally require major repair or replacement of the affected component. NOTE: Engine failure or damage limited to an engine if only one engine fails or is damaged, bent fairing or cowlings, dented skin, small puncture holes in the skin or fabric, ground damage to rotor or propeller blades, and damage to landing gear, wheels, tires, flaps, engine accessories, brakes, or wing tips are not considered "substantial damage" for purposes of this report.

3. "Operator" means any person who causes or authorizes the operation of an aircraft, such as the owner, lessee, or bailee of an aircraft.

4. "Fatal Injury" means any injury that results in death within thirty (30) days of the accident.

5. "Serious Injury" means any injury that (1) requires hospitalization for more than 48 hours, commencing within 7 days from the date the injury was received; (2) results in a fracture of any bone (except simple fracture of fingers, toes, or nose); (3) causes severe hemorrhages, nerve, muscle, or tendon damage; (4) involves injury to any internal organ; or (5) involves second- or third-degree burns, or any burns affecting more than 5 percent of the body surface.

Type of Fire Extinguishing System: If a fire extinguishing system was used to fight an aircraft fire, specify the type(s) of extinguishing system(s) used. Examples include handheld extinguisher, engine fire bottle, cargo/baggage compartment fire suppression system, or airport emergency ground equipment.

Owner/Operator Information: Enter the owner information as shown on the registration certificate. Commercial operators, enter the operator information, including "doing business as" when applicable, as shown on the operator certificate.

Revenue Sightseeing Flight: Indicate whether the accident aircraft was conducting revenue sightseeing operations under 14 CFR Part 91 at the time of the accident.

Air Medical Flight: Indicate whether the accident flight was being conducted for the purpose of carrying medical personnel, patient(s), or organs.

Public Aircraft: Federal, state or local government flight operations such as official travel, law-enforcement, low-level observation, aerial application, firefighting, search and rescue, biological or geological resource management, or aeronautical research. Indicate whether the flight was conducted by the armed forces, federal, state, or local government.

Purpose of Flight: 14 CFR Parts 91, 103, 133, 136, and 137: Indicate the type of operation that was being conducted at the time of the occurrence using the following definitions:

AERIAL APPLICATION--Operations using an aircraft to perform aerial application or dispersion of any substance. Examples include agricultural, health, forestry, cloud seeding, firefighting, insect control, etc.

AERIAL OBSERVATION--These flights include aerial mapping/photography, patrol, search and rescue, hunting, highway traffic advisory, ranching, surveillance, oil and mineral exploration, criminal pursuit, fish spotting, etc.

AIR DROP--Aerial operations, other than aerial application, that are intended to release items in flight.

AIR RACE/SHOW--Includes any flight operations conducted as part of an organized air race or public demonstration.

BUSINESS--includes all personal flying without a paid professional crew for reasons associated with furthering a business, including transportation to and from business meetings or work. This does not include corporate/executive operations, air taxi, or commuter operations.

EXECUTIVE/CORPORATE--Company flying with a paid, professional crew.

FERRY--Non-revenue flight under a special flight or "ferry" permit. Refer to 14 CFR 21.197 for details of special flight permit issuance.

FLIGHT TEST--Flight for the purpose of investigating the flight characteristics of an aircraft/aircraft component or evaluating an applicant for a pilot certificate or rating.

INSTRUCTIONAL--Flying while under the supervision of a flight instructor or receiving air carrier training. Personal proficiency flight operations and personal flight reviews, as required by federal air regulations, are excluded.

OTHER WORK USE--Miscellaneous flight operations conducted for compensation or hire such as construction work (not 14 CFR Part 135 operation), parachuting, aerial advertising, towing gliders, etc.

PERSONAL--Flying for personal reasons (excludes business transportation) including pleasure or personal transportation. This also includes practice or proficiency flights performed under flight instructor supervision and not part of an approved flight training program.

POSITIONING--Non-revenue flight conducted for the primary purpose of relocating the aircraft. Examples include moving the aircraft to a maintenance facility or to load passengers or cargo etc.

UNKNOWN--Use only if the primary purpose of flight is not known.

Other Aircraft--Collision: For all accidents involving a collision with another aircraft, including parked aircraft, check "Collision with other aircraft" under Basic Information and complete this section indicating details about the OTHER aircraft involved in the collision.

Airport Information: Complete this section if the accident/incident occurred on approach, landing, takeoff, departure, or within 3 statute miles of an airport. Please refer to the FAA Airport/Facility Directory or other official source for airport information.

Airport Identifier: Provide the official 3 or 4 character airport identifier number.

Runway: Indicate the number of the runway used, including L, R, or C if applicable.

Runway/Landing Surface: Indicate the type of intended runway/landing surface (do not indicate surface conditions). If the surface type was mixed, check all that apply.

Condition of Runway/Landing Surface: Indicate the condition of the intended runway/landing surface. If multiple conditions existed at the time of the accident, check all that apply.

Weather Information at the Accident/Incident Site: Indicate the weather conditions reported at the accident/incident site at the time of occurrence. If no weather reporting was available for the accident/incident site, indicate the reported conditions at the nearest reporting site. Specify the weather reporting site identifier, the observation time, and distance from the accident/incident.

Sky/Lowest Cloud Condition: Indicate the height above ground level of the lowest cloud condition present at the time of the accident/incident and whether coverage was reported as few, scattered, broken or overcast. Also indicate the height above ground level and coverage of the lowest cloud ceiling present at the time of the accident/incident (reported as broken or overcast).

NOTAMs (D and FDC), AIRMETs, SIGMETs, PIREPs: Describe all NOTAMs (distant (D) or Flight Data Center (FDC), if known), AIRMETs, SIGMETs, and PIREPs in effect near the accident/incident.

Flight Crewmember Information: Indicate the category that best describes the capacity served by this flight crewmember at the time of the accident. The designators "Flight Crewmember 1" and "Flight Crewmember 2" do not refer to a specific pilot position or responsibility. If more than one pilot is aboard, they may be entered in any order and their capacity entered as appropriate.

Degree of Injury: See Definitions on the top half of Page 1 of the instructions. Minor injury is not defined. If an injury does not meet the criteria for another injury category, select Minor.

Date of Last Flight Review or Equivalent: Enter the date of the most recent flight review, or equivalent, completed by this pilot. Refer to 14 CFR 61.56 for accepted equivalents.

Type Ratings: List all type ratings on the pilot certificate. If the pilot holds no type ratings indicate "none." If the pilot holds a pilot certificate other than student and was flying an aircraft requiring an endorsement, enter the type and date of any logbook endorsement(s) for that aircraft. See 14 CFR 61 for examples of required endorsements.

Student Endorsements: If the pilot holds a student pilot certificate, enter all solo endorsements and dates on the student pilot certificate.

Flight Time: Complete the flight time matrix. Solo flight time should be included as "Pilot-in-Command (PIC)" and all dual flight instruction given should be included as "Time as Instructor."

Additional Flight Crewmembers: Complete this section if there were more than two required flight crewmembers on the aircraft. This also includes a check airman performing official duties but does not include cabin crew. State the capacity served by each included crewmember at the time of the accident.

Passenger(s)/Other Personnel: Enter identification and injury severity information for all passengers, cabin crew, and other personnel involved in the accident. See Page 1 of the instructions for the official definition of injury levels.

Several questions throughout the form allow for multiple responses; when appropriate, choose all responses that apply.

These instructions only pertain to major issue areas covered by NTSB Form 6120.1 Pilot/Operator Aircraft Accident/Incident Report. For additional definitions of questions and responses, please refer to www.nts.gov.

Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

Aircraft Damage appears to be substantial. Aircraft has several compound dents located on both leading edges, bottom of wings and both flaps/ground flaps are severely damaged/destroyed from being deployed during landing. Left trailing edge has skin damage, rivets popped near wing root indicating potential structural damage. Engine #1 fan blades will not rotate, engine lining has damage that appears to be caused by fan blades striking interior lining. Both engines have appeared to ingested FOD, as debris was evident.

Images were taken and available for review if needed.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Narrative History Of Flight:**Per Crew Members Statements:**

Eric Pershing NTSB Report regarding N22AU leg from KIAD to KMTN on March 7, 2022.

Preparation for Departure

Performed a post-flight (from KTEB) final walk around. Returned to the plane to clean the cabin and prep the cockpit for our next leg. Obtained clearance, requested 19L, but in expectation that 19C would be granted, entered the latter into the FMS. However, 19L was approved, was changed in the computer and verified by both crew members. Brakes tested fine during taxi.

Takeoff

Was standard, checklists were read, callouts made, wind was pretty gusty but was within limits.

En Route

Were routed to the North and to a vector to intercept final. We were at 5,000 feet for the duration, experiencing moderate turbulence throughout. After takeoff checklists were completed, listened to ATIS at KMTN, set the barometer and input temperature into the FMS. We noted that we were still heavy on fuel, and configured the aircraft early to burn off the excess and extended the speed brakes.

Were cleared to the visual (backed up with the localizer approach). To burn some more fuel, we configured flaps approach and gear down prior to the final approach course. We joined final and started our descent and were given the instruction "best forward speed to the numbers". We picked up the speed a little bit, but not too much, as we lowered landing flaps shortly after those instructions. PF was maintaining roughly 140kts until about a 3-4 mile final when he started slowing it down to be on speed for the approach and landing. This was also approximately when PF retracted the speed brakes.

Landing

We rounded out and had a normal flare, followed by a good touchdown and everything was going well until PF asked "Why aren't the brakes working?" I immediately tried the brakes on my side to no avail. Scanning for the small emergency brake lever, we were not able to locate it in those few seconds, and finally applied the parking brake in case the cause of the brakes failure hadn't affected it, also to no avail. We continued to scan for the emergency brake, and I announced to the tower that we had lost brakes. The aircraft went off the end of the runway, through soft dirt into a marshy area and was stopped by a fence.

Shut-Down

There was no indication or smell of fire, we shut down the engines, turned the battery off, and exited through the main cabin door. Fire rescue had been notified by the tower, and they arrived shortly thereafter. We examined the exterior hydraulic panel which looked to be normal levels, and subsequently disconnected the battery.

Brandt Wolters

NTSB Report N22AU
03/10/2022

We had a gusty landing at KIAD on runway 19C followed by a relatively long taxi to Signature Flight Support to drop our passenger off. We then refueled at Signature Flight Support. I did a post flight walk around. Eric (PNF) got clearance and requested runway 19L. Eric then went inside to pay for fuel and fees. When he returned, he did a final walk around the plane. We performed our "before engine start" checklist, started our engines, and then received taxi clearance to 19L. While taxiing to 19L, our brakes worked with no issues or abnormalities. During this time, we performed our rudder bias and flap check. We then performed our "taxi" and "before take off"

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

As the operator preventing further similar mishaps and conducting safe operations at all times is the number priority to Executive Flight Services, LLC. While NTSB findings and a potential mechanical failure has yet to be determined, through own internal investigation we have identified a potential contributing factor relating to human factors. In order to be proactive and maintain a strong safety culture a company wide bulletin will be issued from Safety and Training addressing human factors. Further safety recommendations will be discussed/implemented pending NTSB report.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Unknown, undetermined at this time; Crew reported brake issue

Eric Pershing NTSB Report regarding N22AU leg from KIAD to KMTN on March 7, 2022.

Preparation for Departure

Performed a post-flight (from KTEB) final walk around. Returned to the plane to clean the cabin and prep the cockpit for our next leg. Obtained clearance, requested 19L, but in expectation that 19C would be granted, entered the latter into the FMS. However, 19L was approved, was changed in the computer and verified by both crew members. Brakes tested fine during taxi.

Takeoff

Was standard, checklists were read, callouts made, wind was pretty gusty but was within limits.

En Route

Were routed to the North and to a vector to intercept final. We were at 5,000 feet for the duration, experiencing moderate turbulence throughout. After takeoff checklists were completed, listened to ATIS at KMTN, set the barometer and input temperature into the FMS. We noted that we were still heavy on fuel, and configured the aircraft early to burn off the excess and extended the speed brakes.

Were cleared to the visual (backed up with the localizer approach). To burn some more fuel, we configured flaps approach and gear down prior to the final approach course. We joined final and started our descent and were given the instruction "best forward speed to the numbers". We picked up the speed a little bit, but not too much, as we lowered landing flaps shortly after those instructions. PF was maintaining roughly 140kts until about a 3-4 mile final when he started slowing it down to be on speed for the approach and landing. This was also approximately when PF retracted the speed brakes.

Landing

We rounded out and had a normal flare, followed by a good touchdown and everything was going well until PF asked "Why aren't the brakes working?" I immediately tried the brakes on my side to no avail. Scanning for the small emergency brake lever, we were not able to locate it in those few seconds, and finally applied the parking brake in case the cause of the brakes failure hadn't affected it, also to no avail. We continued to scan for the emergency brake, and I announced to the tower that we had lost brakes. The aircraft went off the end of the runway, through soft dirt into a marshy area and was stopped by a fence.

Shut-Down

There was no indication or smell of fire, we shut down the engines, turned the battery off, and exited through the main cabin door. Fire rescue had been notified by the tower, and they arrived shortly thereafter. We examined the exterior hydraulic panel which looked to be normal levels, and subsequently disconnected the battery.

We had a gusty landing at KIAD on runway 19C followed by a relatively long taxi to Signature Flight Support to drop our passenger off. We then refueled at Signature Flight Support. I did a post flight walk around. Eric (PNF) got clearance and requested runway 19L. Eric then went inside to pay for fuel and fees. When he returned, he did a final walk around the plane. We performed our "before engine start" checklist, started our engines, and then received taxi clearance to 19L. While taxiing to 19L, our brakes worked with no issues or abnormalities. During this time, we performed our rudder bias and flap check. We then performed our "taxi" and "before take-off" checklists. Finally, we performed our takeoff brief where we verbalized that it would be a left seat departure. We noted our initial assigned heading, initial assigned altitude, and to return to KIAD with any unforeseen events. We held short of 19L for landing traffic with the parking brake set. We received radar vectors and were cleared for takeoff. We then completed the remaining "before take-off" checklist items.

After take-off, we performed our "after take-off" checklist. It was a relatively short flight to KMTN, an enroute time of less than 30 mins. There was moderate turbulence while cruising at 5000 feet. Since we received radar vectors the fuel burn was less than planned. Our landing weight was roughly 50 lbs above our max landing weight. To resolve this, I extended the speed brakes to burn extra fuel and then configured early to further increase fuel burn. KMTN was using runway 15. We loaded the approach to back up the visual approach into runway 15(6997' x 180'). The tower told us "best speed to the numbers." We had a stable approach with added gust factor to our Vref speed. We completed all of our checklists and were on a stable visual approach. Our APG calculation showed that we needed just over 3000 ft of pavement to land. The speed brakes were retracted at 500ft.

We touched down within the touchdown zone using proper crosswind correction. While holding the wind correction in, and maintaining directional control on the center line, the brakes were applied. The touchdown roll felt off, and my first thought was that it could be from the gusty crosswind. When the nose gear touched the pavement the PNF engaged the ground flaps. During this time, we noticed the lack of braking action from the aircraft. The PNF quickly applied brake pressure on his side, which was unsuccessful. While maintaining directional control, we were having a difficult time locating the emergency parking brake lever. As the runway pavement was evaporating, we pulled the parking brake as a last attempt to stop. During this time, PNF notified the tower that we had lost our brakes. We went off the end of the runway and into the marsh. A barbed wire fence stopped us before entering the bay. There was no immediate indication of a fire, we quickly shut the engines down and turned the battery off. We then exited the plane through the main cabin door. Fire rescue arrived shortly after, and we disconnected the battery with their approval.
