

NATIONAL TRANSPORTATION SAFETY BOARD

NTSB Form 6120.1

PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

Email the pilot/operator aircraft accident/incident report to the investigator-in-charge of your accident/incident. If email is not available, mail the report per the instructions below.

If your accident/incident occurred in Maine, Vermont, New Hampshire, Massachusetts, Connecticut, Rhode Island, New York, New Jersey, Pennsylvania, Maryland, Delaware, Virginia, West Virginia, Kentucky, Tennessee, North Carolina, South Carolina, Mississippi, Alabama, Georgia, Florida, the District of Columbia, Puerto Rico, or the US Virgin Islands, send the form to: NTSB, ERA, 45065 Riverside Parkway, Ashburn, VA 20147.

If your accident/incident occurred in Ohio, Michigan, Indiana, Wisconsin, Illinois, Minnesota, Iowa, Missouri, Arkansas, Louisiana, North Dakota, South Dakota, Nebraska, Kansas, Oklahoma, Texas, Colorado, or New Mexico, send the form to: NTSB, CEN, 4760 Oakland Street, Suite 500, Denver, CO 80239.

If your accident/incident occurred in Montana, Wyoming, Idaho, Utah, Arizona, Nevada, Washington, Oregon, California, Hawaii, or the territories of Guam or American Samoa, send the form to: NTSB, WPR, 505 South 336th Street, Suite 540, Federal Way, WA 98003.

If your accident/incident occurred in Alaska, send the form to: NTSB, ANC, 222 West 7th Avenue, Room 216, Box 11, Anchorage, AK 99513.

Rules pertaining to notification of aircraft accidents and incidents, as well as overdue aircraft are found in 49 Code of Federal Regulations (CFR) Part 830 http://www.ecfr.gov/cgi-bin/text-idx?c=ecfr&tpl=/ecfrbrowse/Title49/49cfr830_main_02.tpl. These rules state the authority of the NTSB, define accidents, incidents, injuries, and other terms, and provide procedures for initial and immediate notification of accidents and incidents by aircraft pilots/operators.

A. APPLICABILITY

The pilot/operator of an aircraft shall send a report to the office listed above, based on accident/incident location; immediate notification is required by 49 CFR 830.5(a). **The report shall be filed within 10 days after an accident for which notification is required by Section 830.5, or after 7 days if an overdue aircraft is still missing.**

An aircraft accident, as defined in 49 CFR 830.2, is determined as an occurrence that involves a fatality or serious injury, or substantial damage to the aircraft. For occurrences that do not involve a fatality, the determination that the occurrence is an accident can be appealed by writing to the Director, Office of Aviation Safety, NTSB, 490 L'Enfant Plaza, S.W., Washington, D.C. 20594.

INSTRUCTIONS TO PILOTS/OPERATORS FOR COMPLETING THIS FORM

It is necessary that ALL questions on this report be answered completely and accurately.

If more space is needed, continue on a blank sheet of paper.

Nearest City/Place: Use the name of the nearest community in the state where the accident/incident occurred.

Date/Time: Indicate the date and local time of the event. Be sure to indicate the time zone.

Phase of Operation: Indicate the phase of operation during which the accident/incident occurred.

Aircraft Information: Enter aircraft make and model information as indicated on the aircraft registration certificate, including series. If the involved aircraft is certified as "amateur-built," include the name of the producer of the kit or plans, unless an NTSB employee instructs otherwise.

Maximum Gross Weight: Enter the certificated maximum gross weight for the aircraft involved in the occurrence. This should be the same as the maximum gross weight indicated on the aircraft weight and balance documents.

Engine: Enter engine make and model information as indicated on the engine data plate.

The NTSB uses this form for aircraft accident prevention activities and for statistical purposes. NTSB regulations (49 CFR Part 830) require that **ALL** questions be answered completely and accurately. Completion of this form will take approximately 60 minutes. The NTSB does not guarantee the privacy of any information provided in this form. You need not complete this form unless it displays a valid OMB control number, in accordance with 5 C.F.R. § 1320.5(b), which applies to this collection of information.

B. DEFINITIONS

1. "Aircraft Accident" means an occurrence associated with the operation of an aircraft that takes place between the time any person boards the aircraft with the intention of flight and all such persons have disembarked, and in which any person suffers death, or serious injury, or in which the aircraft receives substantial damage. For purposes of this form, the definition of "aircraft accident" includes "unmanned aircraft accident," as defined at 49 CFR 830.2.

2. "Substantial Damage" means damage or failure that adversely affects the structural strength, performance or flight characteristics of the aircraft, and that would normally require major repair or replacement of the affected component. NOTE: Engine failure or damage limited to an engine if only one engine fails or is damaged, bent fairing or cowling, dented skin, small puncture holes in the skin or fabric, ground damage to rotor or propeller blades, and damage to landing gear, wheels, tires, flaps, engine accessories, brakes, or wing tips are not considered "substantial damage" for purposes of this report.

3. "Operator" means any person who causes or authorizes the operation of an aircraft, such as the owner, lessee, or bailee of an aircraft.

4. "Fatal Injury" means any injury that results in death within thirty (30) days of the accident.

5. "Serious Injury" means any injury that (1) requires hospitalization for more than 48 hours, commencing within 7 days from the date the injury was received; (2) results in a fracture of any bone (except simple fracture of fingers, toes, or nose); (3) causes severe hemorrhages, nerve, muscle, or tendon damage; (4) involves injury to any internal organ; or (5) involves second- or third-degree burns, or any burns affecting more than 5 percent of the body surface.

Type of Fire Extinguishing System: If a fire extinguishing system was used to fight an aircraft fire, specify the type(s) of extinguishing system(s) used. Examples include handheld extinguisher, engine fire bottle, cargo/baggage compartment fire suppression system, or airport emergency ground equipment.

Owner/Operator Information: Enter the owner information as shown on the registration certificate. Commercial operators, enter the operator information, including "doing business as" when applicable, as shown on the operator certificate.

Revenue Sightseeing Flight: Indicate whether the accident aircraft was conducting revenue sightseeing operations under 14 CFR Part 91 at the time of the accident.

Air Medical Flight: Indicate whether the accident flight was being conducted for the purpose of carrying medical personnel, patient(s), or organs.

Public Aircraft: Federal, state or local government flight operations such as official travel, law-enforcement, low-level observation, aerial application, firefighting, search and rescue, biological or geological resource management, or aeronautical research. Indicate whether the flight was conducted by the armed forces, federal, state, or local government.

Purpose of Flight: 14 CFR Parts 91, 103, 133, 136, and 137: Indicate the type of operation that was being conducted at the time of the occurrence using the following definitions:

AERIAL APPLICATION--Operations using an aircraft to perform aerial application or dispersion of any substance. Examples include agricultural, health, forestry, cloud seeding, firefighting, insect control, etc.

AERIAL OBSERVATION--These flights include aerial mapping/photography, patrol, search and rescue, hunting, highway traffic advisory, ranching, surveillance, oil and mineral exploration, criminal pursuit, fish spotting, etc.

AIR DROP--Aerial operations, other than aerial application, that are intended to release items in flight.

AIR RACE/SHOW--Includes any flight operations conducted as part of an organized air race or public demonstration.

BUSINESS--includes all personal flying without a paid professional crew for reasons associated with furthering a business, including transportation to and from business meetings or work. This does not include corporate/executive operations, air taxi, or commuter operations.

EXECUTIVE/CORPORATE--Company flying with a paid, professional crew.

FERRY--Non-revenue flight under a special flight or "ferry" permit. Refer to 14 CFR 21.197 for details of special flight permit issuance.

FLIGHT TEST--Flight for the purpose of investigating the flight characteristics of an aircraft/aircraft component or evaluating an applicant for a pilot certificate or rating.

INSTRUCTIONAL--Flying while under the supervision of a flight instructor or receiving air carrier training. Personal proficiency flight operations and personal flight reviews, as required by federal air regulations, are excluded.

OTHER WORK USE--Miscellaneous flight operations conducted for compensation or hire such as construction work (not 14 CFR Part 135 operation), parachuting, aerial advertising, towing gliders, etc.

PERSONAL--Flying for personal reasons (excludes business transportation) including pleasure or personal transportation. This also includes practice or proficiency flights performed under flight instructor supervision and not part of an approved flight training program.

POSITIONING--Non-revenue flight conducted for the primary purpose of relocating the aircraft. Examples include moving the aircraft to a maintenance facility or to load passengers or cargo etc.

UNKNOWN--Use only if the primary purpose of flight is not known.

Other Aircraft--Collision: For all accidents involving a collision with another aircraft, including parked aircraft, check "Collision with other aircraft" under Basic Information and complete this section indicating details about the OTHER aircraft involved in the collision.

Airport Information: Complete this section if the accident/incident occurred on approach, landing, takeoff, departure, or within 3 statute miles of an airport. Please refer to the FAA Airport/Facility Directory or other official source for airport information.

Airport Identifier: Provide the official 3 or 4 character airport identifier number.

Runway: Indicate the number of the runway used, including L, R, or C if applicable.

Runway/Landing Surface: Indicate the type of intended runway/landing surface (do not indicate surface conditions). If the surface type was mixed, check all that apply.

Condition of Runway/Landing Surface: Indicate the condition of the intended runway/landing surface. If multiple conditions existed at the time of the accident, check all that apply.

Weather Information at the Accident/Incident Site: Indicate the weather conditions reported at the accident/incident site at the time of occurrence. If no weather reporting was available for the accident/incident site, indicate the reported conditions at the nearest reporting site. Specify the weather reporting site identifier, the observation time, and distance from the accident/incident.

Sky/Lowest Cloud Condition: Indicate the height above ground level of the lowest cloud condition present at the time of the accident/incident and whether coverage was reported as few, scattered, broken or overcast. Also indicate the height above ground level and coverage of the lowest cloud ceiling present at the time of the accident/incident (reported as broken or overcast).

NOTAMS (D and FDC), AIRMETs, SIGMETs, PIREPs: Describe all NOTAMS (distant (D) or Flight Data Center (FDC), if known), AIRMETs, SIGMETs, and PIREPs in effect near the accident/incident.

Flight Crewmember Information: Indicate the category that best describes the capacity served by this flight crewmember at the time of the accident. The designators "Flight Crewmember 1" and "Flight Crewmember 2" do not refer to a specific pilot position or responsibility. If more than one pilot is aboard, they may be entered in any order and their capacity entered as appropriate.

Degree of Injury: See Definitions on the top half of Page 1 of the instructions. Minor injury is not defined. If an injury does not meet the criteria for another injury category, select Minor.

Date of Last Flight Review or Equivalent: Enter the date of the most recent flight review, or equivalent, completed by this pilot. Refer to 14 CFR 61.56 for accepted equivalents.

Type Ratings: List all type ratings on the pilot certificate. If the pilot holds no type ratings indicate "none." If the pilot holds a pilot certificate other than student and was flying an aircraft requiring an endorsement, enter the type and date of any logbook endorsement(s) for that aircraft. See 14 CFR 61 for examples of required endorsements.

Student Endorsements: If the pilot holds a student pilot certificate, enter all solo endorsements and dates on the student pilot certificate.

Flight Time: Complete the flight time matrix. Solo flight time should be included as "Pilot-in-Command (PIC)" and all dual flight instruction given should be included as "Time as Instructor."

Additional Flight Crewmembers: Complete this section if there were more than two required flight crewmembers on the aircraft. This also includes a check airman performing official duties but does not include cabin crew. State the capacity served by each included crewmember at the time of the accident.

Passenger(s)/Other Personnel: Enter identification and injury severity information for all passengers, cabin crew, and other personnel involved in the accident. See Page 1 of the instructions for the official definition of injury levels.

Several questions throughout the form allow for multiple responses; when appropriate, choose all responses that apply.

These instructions only pertain to major issue areas covered by NTSB Form 6120.1 Pilot/Operator Aircraft Accident/Incident Report. For additional definitions of questions and responses, please refer to www.nts.gov.

NTSB Form 6120.1

PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

Email the pilot/operator aircraft accident/incident report to the investigator-in-charge of your accident/incident. If email is not available, mail the report per the instructions below.

If your accident/incident occurred in Maine, Vermont, New Hampshire, Massachusetts, Connecticut, Rhode Island, New York, New Jersey, Pennsylvania, Maryland, Delaware, Virginia, West Virginia, Kentucky, Tennessee, North Carolina, South Carolina, Mississippi, Alabama, Georgia, Florida, the District of Columbia, Puerto Rico, or the US Virgin Islands, send the form to: NTSB, ERA, 45065 Riverside Parkway, Ashburn, VA 20147.

If your accident/incident occurred in Ohio, Michigan, Indiana, Wisconsin, Illinois, Minnesota, Iowa, Missouri, Arkansas, Louisiana, North Dakota, South Dakota, Nebraska, Kansas, Oklahoma, Texas, Colorado, or New Mexico, send the form to: NTSB, CEN, 4760 Oakland Street, Suite 500, Denver, CO 80239.

If your accident/incident occurred in Montana, Wyoming, Idaho, Utah, Arizona, Nevada, Washington, Oregon, California, Hawaii, or the territories of Guam or American Samoa, send the form to: NTSB, WPR, 505 South 336th Street, Suite 540, Federal Way, WA 98003.

If your accident/incident occurred in Alaska, send the form to: NTSB, ANC, 222 West 7th Avenue, Room 216, Box 11, Anchorage, AK 99513.

Rules pertaining to notification of aircraft accidents and incidents, as well as overdue aircraft are found in 49 Code of Federal Regulations (CFR) Part 830 http://www.ecfr.gov/cgi-bin/text-idx?c=ecfr&tpl=/ecfrbrowse/Title49/49cfr830_main_02.tpl. These rules state the authority of the NTSB, define accidents, incidents, injuries, and other terms, and provide procedures for initial and immediate notification of accidents and incidents by aircraft pilots/operators.

A. APPLICABILITY

The pilot/operator of an aircraft shall send a report to the office listed above, based on accident/incident location; immediate notification is required by 49 CFR 830.5(a). **The report shall be filed within 10 days after an accident for which notification is required by Section 830.5, or after 7 days if an overdue aircraft is still missing.**

An aircraft accident, as defined in 49 CFR 830.2, is determined as an occurrence that involves a fatality or serious injury, or substantial damage to the aircraft. For occurrences that do not involve a fatality, the determination that the occurrence is an accident can be appealed by writing to the Director, Office of Aviation Safety, NTSB, 490 L'Enfant Plaza, S.W., Washington, D.C. 20594.

INSTRUCTIONS TO PILOTS/OPERATORS FOR COMPLETING THIS FORM

It is necessary that ALL questions on this report be answered completely and accurately.

If more space is needed, continue on a blank sheet of paper.

Nearest City/Place: Use the name of the nearest community in the state where the accident/incident occurred.

Date/Time: Indicate the date and local time of the event. Be sure to indicate the time zone.

Phase of Operation: Indicate the phase of operation during which the accident/incident occurred.

Aircraft Information: Enter aircraft make and model information as indicated on the aircraft registration certificate, including series. If the involved aircraft is certified as "amateur-built," include the name of the producer of the kit or plans, unless an NTSB employee instructs otherwise.

Maximum Gross Weight: Enter the certificated maximum gross weight for the aircraft involved in the occurrence. This should be the same as the maximum gross weight indicated on the aircraft weight and balance documents.

Engine: Enter engine make and model information as indicated on the engine data plate.

The NTSB uses this form for aircraft accident prevention activities and for statistical purposes. NTSB regulations (49 CFR Part 830) require that **ALL** questions be answered completely and accurately. Completion of this form will take approximately 60 minutes. The NTSB does not guarantee the privacy of any information provided in this form. You need not complete this form unless it displays a valid OMB control number, in accordance with 5 C.F.R. § 1320.5(b), which applies to this collection of information.

B. DEFINITIONS

1. "Aircraft Accident" means an occurrence associated with the operation of an aircraft that takes place between the time any person boards the aircraft with the intention of flight and all such persons have disembarked, and in which any person suffers death, or serious injury, or in which the aircraft receives substantial damage. For purposes of this form, the definition of "aircraft accident" includes "unmanned aircraft accident," as defined at 49 CFR 830.2.

2. "Substantial Damage" means damage or failure that adversely affects the structural strength, performance or flight characteristics of the aircraft, and that would normally require major repair or replacement of the affected component. NOTE: Engine failure or damage limited to an engine if only one engine fails or is damaged, bent fairing or cowling, dented skin, small puncture holes in the skin or fabric, ground damage to rotor or propeller blades, and damage to landing gear, wheels, tires, flaps, engine accessories, brakes, or wing tips are not considered "substantial damage" for purposes of this report.

3. "Operator" means any person who causes or authorizes the operation of an aircraft, such as the owner, lessee, or bailee of an aircraft.

4. "Fatal Injury" means any injury that results in death within thirty (30) days of the accident.

5. "Serious Injury" means any injury that (1) requires hospitalization for more than 48 hours, commencing within 7 days from the date the injury was received; (2) results in a fracture of any bone (except simple fracture of fingers, toes, or nose); (3) causes severe hemorrhages, nerve, muscle, or tendon damage; (4) involves injury to any internal organ; or (5) involves second- or third-degree burns, or any burns affecting more than 5 percent of the body surface.

Type of Fire Extinguishing System: If a fire extinguishing system was used to fight an aircraft fire, specify the type(s) of extinguishing system(s) used. Examples include handheld extinguisher, engine fire bottle, cargo/baggage compartment fire suppression system, or airport emergency ground equipment.

Owner/Operator Information: Enter the owner information as shown on the registration certificate. Commercial operators, enter the operator information, including "doing business as" when applicable, as shown on the operator certificate.

Revenue Sightseeing Flight: Indicate whether the accident aircraft was conducting revenue sightseeing operations under 14 CFR Part 91 at the time of the accident.

Air Medical Flight: Indicate whether the accident flight was being conducted for the purpose of carrying medical personnel, patient(s), or organs.

Public Aircraft: Federal, state or local government flight operations such as official travel, law-enforcement, low-level observation, aerial application, firefighting, search and rescue, biological or geological resource management, or aeronautical research. Indicate whether the flight was conducted by the armed forces, federal, state, or local government.

Purpose of Flight: 14 CFR Parts 91, 103, 133, 136, and 137: Indicate the type of operation that was being conducted at the time of the occurrence using the following definitions:

AERIAL APPLICATION--Operations using an aircraft to perform aerial application or dispersion of any substance. Examples include agricultural, health, forestry, cloud seeding, firefighting, insect control, etc.

AERIAL OBSERVATION--These flights include aerial mapping/photography, patrol, search and rescue, hunting, highway traffic advisory, ranching, surveillance, oil and mineral exploration, criminal pursuit, fish spotting, etc.

AIR DROP--Aerial operations, other than aerial application, that are intended to release items in flight.

AIR RACE/SHOW--Includes any flight operations conducted as part of an organized air race or public demonstration.

BUSINESS--includes all personal flying without a paid professional crew for reasons associated with furthering a business, including transportation to and from business meetings or work. This does not include corporate/executive operations, air taxi, or commuter operations.

EXECUTIVE/CORPORATE--Company flying with a paid, professional crew.

FERRY--Non-revenue flight under a special flight or "ferry" permit. Refer to 14 CFR 21.197 for details of special flight permit issuance.

FLIGHT TEST--Flight for the purpose of investigating the flight characteristics of an aircraft/aircraft component or evaluating an applicant for a pilot certificate or rating.

INSTRUCTIONAL--Flying while under the supervision of a flight instructor or receiving air carrier training. Personal proficiency flight operations and personal flight reviews, as required by federal air regulations, are excluded.

OTHER WORK USE--Miscellaneous flight operations conducted for compensation or hire such as construction work (not 14 CFR Part 135 operation), parachuting, aerial advertising, towing gliders, etc.

PERSONAL--Flying for personal reasons (excludes business transportation) including pleasure or personal transportation. This also includes practice or proficiency flights performed under flight instructor supervision and not part of an approved flight training program.

POSITIONING--Non-revenue flight conducted for the primary purpose of relocating the aircraft. Examples include moving the aircraft to a maintenance facility or to load passengers or cargo etc.

UNKNOWN--Use only if the primary purpose of flight is not known.

Other Aircraft--Collision: For all accidents involving a collision with another aircraft, including parked aircraft, check "Collision with other aircraft" under Basic Information and complete this section indicating details about the OTHER aircraft involved in the collision.

Airport Information: Complete this section if the accident/incident occurred on approach, landing, takeoff, departure, or within 3 statute miles of an airport. Please refer to the FAA Airport/Facility Directory or other official source for airport information.

Airport Identifier: Provide the official 3 or 4 character airport identifier number.

Runway: Indicate the number of the runway used, including L, R, or C if applicable.

Runway/Landing Surface: Indicate the type of intended runway/landing surface (do not indicate surface conditions). If the surface type was mixed, check all that apply.

Condition of Runway/Landing Surface: Indicate the condition of the intended runway/landing surface. If multiple conditions existed at the time of the accident, check all that apply.

Weather Information at the Accident/Incident Site: Indicate the weather conditions reported at the accident/incident site at the time of occurrence. If no weather reporting was available for the accident/incident site, indicate the reported conditions at the nearest reporting site. Specify the weather reporting site identifier, the observation time, and distance from the accident/incident.

Sky/Lowest Cloud Condition: Indicate the height above ground level of the lowest cloud condition present at the time of the accident/incident and whether coverage was reported as few, scattered, broken or overcast. Also indicate the height above ground level and coverage of the lowest cloud ceiling present at the time of the accident/incident (reported as broken or overcast).

NOTAMs (D and FDC), AIRMETs, SIGMETs, PIREPs: Describe all NOTAMs (distant (D) or Flight Data Center (FDC), if known), AIRMETs, SIGMETs, and PIREPs in effect near the accident/incident.

Flight Crewmember Information: Indicate the category that best describes the capacity served by this flight crewmember at the time of the accident. The designators "Flight Crewmember 1" and "Flight Crewmember 2" do not refer to a specific pilot position or responsibility. If more than one pilot is aboard, they may be entered in any order and their capacity entered as appropriate.

Degree of Injury: See Definitions on the top half of Page 1 of the instructions. Minor injury is not defined. If an injury does not meet the criteria for another injury category, select Minor.

Date of Last Flight Review or Equivalent: Enter the date of the most recent flight review, or equivalent, completed by this pilot. Refer to 14 CFR 61.56 for accepted equivalents.

Type Ratings: List all type ratings on the pilot certificate. If the pilot holds no type ratings indicate "none." If the pilot holds a pilot certificate other than student and was flying an aircraft requiring an endorsement, enter the type and date of any logbook endorsement(s) for that aircraft. See 14 CFR 61 for examples of required endorsements.

Student Endorsements: If the pilot holds a student pilot certificate, enter all solo endorsements and dates on the student pilot certificate.

Flight Time: Complete the flight time matrix. Solo flight time should be included as "Pilot-in-Command (PIC)" and all dual flight instruction given should be included as "Time as Instructor."

Additional Flight Crewmembers: Complete this section if there were more than two required flight crewmembers on the aircraft. This also includes a check airman performing official duties but does not include cabin crew. State the capacity served by each included crewmember at the time of the accident.

Passenger(s)/Other Personnel: Enter identification and injury severity information for all passengers, cabin crew, and other personnel involved in the accident. See Page 1 of the instructions for the official definition of injury levels.

Several questions throughout the form allow for multiple responses; when appropriate, choose all responses that apply.

These instructions only pertain to major issue areas covered by NTSB Form 6120.1 Pilot/Operator Aircraft Accident/Incident Report. For additional definitions of questions and responses, please refer to www.nts.gov.

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

R/H Aileron, R/H Main Landing Gear, R/H Flap Assembly, L/H Flap Assembly, static wick on R/H Elevator. Damages reported here are only from a brief assessment by the crew and in no way compile a complete or accurate list.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

N903JT KTEB – KAGC

IOE day #6, Aman Lal as the training candidate (SIC at the time of the event) and Aaron Graszler as the Training Captain PIC. Aman Lal was to act as pilot flying and Aaron Graszler as the pilot monitoring. As briefed with the SIC I would act as a support role at this part of the training phase and be an SIC role to him. The SIC performed all the preflight planning and flight plan filing, while I also performed preflight planning to make sure we were all on the same page.

Preflight planning and data were gathered and considered as well as briefed for potential winter weather conditions upon landing at KAGC. Utilizing eligible on demand performance calculations, the landing distance on a wet runway (AFM 115%). Runway condition codes were not available as a NOTAM but were available in the air upon talking with local approach and tower. Previous runway braking actions were reported good, so factoring a runway condition code of 5. We calculated runway required to land well within distance of the runway utilizing Eligible On Demand, factoring in flaps TO/APPR icing conditions, engine bleeds on, and wet runway (reports provided to company officials).

We departed normally from KTEB, entered clouds shortly after departure and were IMC for generally the remainder of the flight. Climbing out we had icing detected and the aircraft systems operated normally, automatically turning on the wing and tail deicing systems, while we already had the engine anti-icing switches in the "ON" position. At some point during the climb out we had a L Engine Bleed Fail CAS message and ran the appropriate checklist. The checklist called to turn the L/H Engine Bleed to "OFF" and turn the Wing Flow switch to the operable side, in this case being the R/H. The checklist indicated with Engine Bleed in the OFF position no higher than FL250 could be obtained. We discussed staying below FL250 for the remainder of the flight and while level at 17,000 (I believe I recall), the CAS message went away. I discussed with the SIC that with the CAS message "fixing itself" I would return the controls back to normal and planned altitude with no deviations would be required. I utilized the checklist and returned items back to the NORM and ON position for the appropriate systems. We continued to climb to FL400 for a moment before decent to the airport. I was monitoring ATIS to get the latest updates at the airport while the SIC was looking at alternative options if a suitable report was not received. During decent, the same L/H Engine Bleed CAS message illuminated again, we again ran the checklist as stated prior, and I had mentally planned a call to maintenance control upon landing to discuss the issue.

While monitoring the ATIS at the airport I never recall hearing any official braking action reporting, the only thing I recall hearing was 1/8" slush on taxiways and ramp areas. I do not recall hearing information regarding the runway so we continued with the intent that a local report would be our deciding factor. Meanwhile, the SIC and I were discussing alternative airports of KPIT, KYNG and when he had filed the flight plan, he had listed KCLE as a weather alternate, with KPIT and KYNG being our mental performance alternates.

As we neared the airport we had calculated and recalculated our landing distance with multiple scenarios, we had gotten a report of previous landing traffic reported good braking. That told me and the SIC that the runway would be wet as anticipated, but no word of contamination. As a Training Captain, I allowed the SIC continue with the landing since the only factor to consider was lower visibility and braking action reported as good. I never anticipated runway contamination and therefore we continued to KAGC, had the conditions been reported as braking action less than good we would have proceeded elsewhere, and EOD calculations would be null and void for landing on Runway 28. The ILS 28 was setup and briefed, calculations for anticipated runway conditions were input to the CDU and we proceeded. We had performed all appropriate checklists and were holding on flaps landing on the approach checklist.

We were informed of current visibility at the airport of 4000' RVR which was suitable for us to continue with the approach, minimums for ILS 28 at KAGC are 2400' RVR. We were vectored on to the ILS and captured the localizer at approximately 180 knots or greater to comply with the aircraft icing conditions speed requirements. I do not recall any anomalies proceeding with the approach, we were configured, with checklists complete and stabilized within 10 knots of calculated vREF by 1000' AGL. I recall seeing our "green dot" speed was just slightly higher than calculated vREF and I told the SIC to fly that as the REF speed. The tower had told us to continue as a

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Better reporting of runway conditions if degraded from last report, considering there was a snow plow and brush combination on the runway just prior to landing, assumed conditions were being maintained.

More inquiry by the crew as to current runway conditions, not assuming conditions are being maintained throughout a precipitation event. Crew could have been more assertive in finding out real time runway conditions from equipment operator that just vacated the runway.

EVACUATION OF AIRCRAFTWas an emergency evacuation of the aircraft performed? ☒ Yes ☐ No

Method of Exit – Describe how the occupants exited and how many occupants evacuated each location

Main entry door was utilized. PIC got up from the right hand seat, went back into cabin to attend to passenger evacuation, and check for noticeable fire or fuel leaks. PIC opened the main entry door to verify ability to exit from that exit. SIC got up from the left hand seat and exited the aircraft through the main entry door. PIC then told the passenger we are evacuating through the main entry door, and the PIC then exited and stood next to the opening on the ground to allow the passenger to come forward in the aircraft. PIC then helped

At some point during the climb out we had a L Engine Bleed Fail CAS message and ran the appropriate checklist. The checklist called to turn the L/H Engine Bleed to "OFF" and turn the Wing Flow switch to the operable side, in this case being the R/H. The checklist indicated with Engine Bleed in the OFF position no higher than FL250 could be obtained. We discussed staying below FL250 for the remainder of the flight and while level at 17,000 (I believe I recall), the CAS message went away. I discussed with the SIC that with the CAS message "fixing itself" I would return the controls back to normal and planned altitude with no deviations would be required. I utilized the checklist and returned items back to the NORM and ON position for the appropriate systems. We continued to climb to FL400 for a moment before decent to the airport. I was monitoring ATIS to get the latest updates at the airport while the SIC was looking at alternative options if a suitable report was not received. During decent, the same L/H Engine Bleed CAS message illuminated again, we again ran the checklist as stated prior, and I had mentally planned a call to maintenance control upon landing to discuss the issue.

While monitoring the ATIS at the airport I never recall hearing any official braking action reporting, the only thing I recall hearing was 1/8" slush on taxiways and ramp areas. I do not recall hearing information regarding the runway so we continued with the intent that a local report would be our deciding factor. Meanwhile, the SIC and I were discussing alternative airports of KPIT, KYNG and when he had filed the flight plan, he had listed KCLE as a weather alternate, with KPIT and KYNG being our mental performance alternates.

As we neared the airport we had calculated and recalculated our landing distance with multiple scenarios, we had gotten a report of previous landing traffic reported good braking. That told me and the SIC that the runway would be wet as anticipated, but no word of contamination. As a Training Captain, I allowed the SIC continue with the landing since the only factor to consider was lower visibility and braking action reported as good. I never anticipated runway contamination and therefore we continued to KAGC, had the conditions been reported as braking action less than good we would have proceeded elsewhere, and EOD calculations would be null and void for landing on Runway 28. The ILS 28 was setup and briefed, calculations for anticipated runway conditions were input to the CDU and we proceeded. We had performed all appropriate checklists and were holding on flaps landing on the approach checklist.

We were informed of current visibility at the airport of 4000' RVR which was suitable for us to continue with the approach, minimums for ILS 28 at KAGC are 2400' RVR. We were vectored on to the ILS and captured the localizer at approximately 180 knots or greater to comply with the aircraft icing conditions speed requirements. I do not recall any anomalies proceeding with the approach, we were configured, with checklists complete and stabilized within 10 knots of calculated vREF by 1000' AGL. I recall seeing our "green dot" speed was just slightly higher than calculated vREF and I told the SIC to fly that as the REF speed. The tower had told us to continue as a snowplow was on the runway. Shortly thereafter we were cleared to land, and I do not recall hearing any runway anomaly reports at this time. I was monitoring outside while the SIC was monitoring inside at the instruments. I recall calling ground contact about 300-500' above minimums, 100' or so above minimums I saw approach lights, lost them momentarily and saw them prior to minimums, we continued down as briefed, and prior to 100' over TDZE I called the runway in sight. At this point I could see the runway end lights and runway centerline. From what I could see the middle section of the runway looked like pavement from the altitude and speed, and the shoulders of the runway were slightly obscured by snow, but I could still see the shoulder runway markings faintly.

I recall touching down slightly beyond the 1000' markers of the runway but not egregiously, and it felt like the first 1/3 of the runway. I called for the SIC to extend the speed brake which I believe he did, but I never was able to verify as I was back to looking outside to monitor for deceleration and maintaining runway centerline. I recall a slow deceleration below 100 knots and at some point, I had called for maximum braking, I recall seeing 80 knots but cannot say in relation to the runway where we were. It was an abnormal deceleration when considering a wet runway. I never felt the anti-skid system turn on or off and remembering this being very odd. At some point I also got on the brakes, and don't recall calling for control but was going to overpower, if necessary, given the circumstances. I recall being fixated on the last 1000' of lighting and knowing we were still at a high enough speed that if we didn't do something more in short order things would not be good. I started at this point reaching for and applying the emergency braking system in hopes something would change. I at some point just locked the emergency brake into its detent and started noticing the end of the runway approaching with a very short runoff area. I vividly recall seeing the ground sort of disappear beyond the departure end. I am not sure at this point if I started steering to the left to try and get more flat ground or if the airplane just started turning, but self-preservation started kicking in. I recall sliding sideways with the nose of the

airplane facing south, meaning the right side of the aircraft was leading the slide. I next vividly recall thinking that as we hit the grass at the end of the runway, how long will the R/H main gear hold on before collapsing. I could feel us dig into the dirt, and at some point, the gear did collapse. The next few seconds we were just along for the ride, as pretty much the entire landing rollout. I recall spinning and now the aft of the aircraft facing downhill and at some point, coming to a stop realizing we were upright, and I looked over to the SIC, he appeared to be in good physical condition, and then I quickly turned around and asked the passenger if he was ok, which he replied that he was. I remember making a radio call of "We're off the end", to which ATC replied something similar to "they are on their way". Our final resting place of the aircraft was nose facing east, with the tail of the aircraft facing west and downhill of the embankment.

From this point we shut down the engines immediately, the SIC had turned the battery off, and I immediately focused on getting evacuated from the aircraft. I got up out of my seat to look at the outside of the aircraft for fuel or fire through the cabin windows and to prepare the passenger for evacuation. I opened the main entry door, the SIC vacated his seat and exited through the main entry door. I grabbed the passengers' belongings and began to help him out of his seat, I stepped out of the aircraft to allow him to come up to the doorway, I stood just outside of the doorway and provided him with a hand to help him get up through the forward seats. Once I helped him down the doorway stairs, I recall pushing him towards the top of the embankment we came to rest on, and another individual (later identified as an airport official) at the top of the hill gave him a hand up. I recall needing a hand to get up the hill myself as it was a bit slick and a steep bank. Once outside of the aircraft we were able to assess no fire and no immediate fuel leaking that could be seen. We got away from the aircraft and waited for emergency personnel to come upon the scene.

After this I just recall talking with the passenger and SIC to make sure everyone was ok, other than emotionally shook up. When the fire fighters arrived on scene, I gave them a quick synopsis and briefing and that everyone was evacuated, and no persons were remaining on board. I called company personnel as quickly as I could to get them involved.

While walking around the end of the runway after things were in the hands of officials, I remember feeling a snowy or slush on the runway surface but cannot recall exactly how thick or if it extended to the centerline of the runway where I had seen runway surface. I'm not certain how long after the accident this observation was made. The snowfall rate had picked up after our landing.

These are the details of the incident of N903JT at KAGC on 03/09/2022 to the best of my recollection, report finalizing on 03/10/2022.
