

NATIONAL TRANSPORTATION SAFETY BOARD

NTSB Form 6120.1

PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

Email the pilot/operator aircraft accident/incident report to the investigator-in-charge of your accident/incident. If email is not available, mail the report per the instructions below.

If your accident/incident occurred in Maine, Vermont, New Hampshire, Massachusetts, Connecticut, Rhode Island, New York, New Jersey, Pennsylvania, Maryland, Delaware, Virginia, West Virginia, Kentucky, Tennessee, North Carolina, South Carolina, Mississippi, Alabama, Georgia, Florida, the District of Columbia, Puerto Rico, or the US Virgin Islands, send the form to: NTSB, ERA, 45065 Riverside Parkway, Ashburn, VA 20147.

If your accident/incident occurred in Ohio, Michigan, Indiana, Wisconsin, Illinois, Minnesota, Iowa, Missouri, Arkansas, Louisiana, North Dakota, South Dakota, Nebraska, Kansas, Oklahoma, Texas, Colorado, or New Mexico, send the form to: NTSB, CEN, 4760 Oakland Street, Suite 500, Denver, CO 80239.

If your accident/incident occurred in Montana, Wyoming, Idaho, Utah, Arizona, Nevada, Washington, Oregon, California, Hawaii, or the territories of Guam or American Samoa, send the form to: NTSB, WPR, 505 South 336th Street, Suite 540, Federal Way, WA 98003.

If your accident/incident occurred in Alaska, send the form to: NTSB, ANC, 222 West 7th Avenue, Room 216, Box 11, Anchorage, AK 99513.

Rules pertaining to notification of aircraft accidents and incidents, as well as overdue aircraft are found in 49 *Code of Federal Regulations* (CFR) Part 830 http://www.ecfr.gov/cgi-bin/text-idx?c=ecfr&tpl=/ecfrbrowse/Title49/49cfr830_main_02.tpl. These rules state the authority of the NTSB, define accidents, incidents, injuries, and other terms, and provide procedures for initial and immediate notification of accidents and incidents by aircraft pilots/operators.

A. APPLICABILITY

The pilot/operator of an aircraft shall send a report to the office listed above, based on accident/incident location; immediate notification is required by 49 CFR 830.5(a). **The report shall be filed within 10 days after an accident for which notification is required by Section 830.5, or after 7 days if an overdue aircraft is still missing.**

An aircraft accident, as defined in 49 CFR 830.2, is determined as an occurrence that involves a fatality or serious injury, or substantial damage to the aircraft. For occurrences that do not involve a fatality, the determination that the occurrence is an accident can be appealed by writing to the Director, Office of Aviation Safety, NTSB, 490 L'Enfant Plaza, S.W., Washington, D.C. 20594.

INSTRUCTIONS TO PILOTS/OPERATORS FOR COMPLETING THIS FORM

It is necessary that ALL questions on this report be answered completely and accurately.

If more space is needed, continue on a blank sheet of paper.

Nearest City/Place: Use the name of the nearest community in the state where the accident/incident occurred.

Date/Time: Indicate the date and local time of the event. Be sure to indicate the time zone.

Phase of Operation: Indicate the phase of operation during which the accident/incident occurred.

Aircraft Information: Enter aircraft make and model information as indicated on the aircraft registration certificate, including series. If the involved aircraft is certified as "amateur-built," include the name of the producer of the kit or plans, unless an NTSB employee instructs otherwise.

Maximum Gross Weight: Enter the certificated maximum gross weight for the aircraft involved in the occurrence. This should be the same as the maximum gross weight indicated on the aircraft weight and balance documents.

Engine: Enter engine make and model information as indicated on the engine data plate.

The NTSB uses this form for aircraft accident prevention activities and for statistical purposes. NTSB regulations (49 CFR Part 830) require that **ALL** questions be answered completely and accurately. Completion of this form will take approximately 60 minutes. The NTSB does not guarantee the privacy of any information provided in this form. You need not complete this form unless it displays a valid OMB control number, in accordance with 5 C.F.R. § 1320.5(b), which applies to this collection of information.

B. DEFINITIONS

1. "Aircraft Accident" means an occurrence associated with the operation of an aircraft that takes place between the time any person boards the aircraft with the intention of flight and all such persons have disembarked, and in which any person suffers death, or serious injury, or in which the aircraft receives substantial damage. For purposes of this form, the definition of "aircraft accident" includes "unmanned aircraft accident," as defined at 49 CFR 830.2.

2. "Substantial Damage" means damage or failure that adversely affects the structural strength, performance or flight characteristics of the aircraft, and that would normally require major repair or replacement of the affected component. NOTE: Engine failure or damage limited to an engine if only one engine fails or is damaged, bent fairing or cowlings, dented skin, small puncture holes in the skin or fabric, ground damage to rotor or propeller blades, and damage to landing gear, wheels, tires, flaps, engine accessories, brakes, or wing tips are not considered "substantial damage" for purposes of this report.

3. "Operator" means any person who causes or authorizes the operation of an aircraft, such as the owner, lessee, or bailee of an aircraft.

4. "Fatal Injury" means any injury that results in death within thirty (30) days of the accident.

5. "Serious Injury" means any injury that (1) requires hospitalization for more than 48 hours, commencing within 7 days from the date the injury was received; (2) results in a fracture of any bone (except simple fracture of fingers, toes, or nose); (3) causes severe hemorrhages, nerve, muscle, or tendon damage; (4) involves injury to any internal organ; or (5) involves second- or third-degree burns, or any burns affecting more than 5 percent of the body surface.

Type of Fire Extinguishing System: If a fire extinguishing system was used to fight an aircraft fire, specify the type(s) of extinguishing system(s) used. Examples include handheld extinguisher, engine fire bottle, cargo/baggage compartment fire suppression system, or airport emergency ground equipment.

Owner/Operator Information: Enter the owner information as shown on the registration certificate. Commercial operators, enter the operator information, including "doing business as" when applicable, as shown on the operator certificate.

Revenue Sightseeing Flight: Indicate whether the accident aircraft was conducting **revenue** sightseeing operations under 14 CFR Part 91 at the time of the accident.

Air Medical Flight: Indicate whether the accident flight was being conducted for the purpose of carrying medical personnel, patient(s), or organs.

Public Aircraft: Federal, state or local government flight operations such as official travel, law-enforcement, low-level observation, aerial application, firefighting, search and rescue, biological or geological resource management, or aeronautical research. Indicate whether the flight was conducted by the armed forces, federal, state, or local government.

Purpose of Flight: 14 CFR Parts 91, 103, 133, 136, and 137: Indicate the type of operation that was being conducted at the time of the occurrence using the following definitions:

AERIAL APPLICATION--Operations using an aircraft to perform aerial application or dispersion of any substance. Examples include agricultural, health, forestry, cloud seeding, firefighting, insect control, etc.

AERIAL OBSERVATION--These flights include aerial mapping/photography, patrol, search and rescue, hunting, highway traffic advisory, ranching, surveillance, oil and mineral exploration, criminal pursuit, fish spotting, etc.

AIR DROP--Aerial operations, other than aerial application, that are intended to release items in flight.

AIR RACE/SHOW--Includes any flight operations conducted as part of an organized air race or public demonstration.

BUSINESS--includes all personal flying without a paid professional crew for reasons associated with furthering a business, including transportation to and from business meetings or work. This does not include corporate/executive operations, air taxi, or commuter operations.

EXECUTIVE/CORPORATE--Company flying with a paid, professional crew.

FERRY--Non-revenue flight under a special flight or "ferry" permit. Refer to 14 CFR 21.197 for details of special flight permit issuance.

FLIGHT TEST--Flight for the purpose of investigating the flight characteristics of an aircraft/aircraft component or evaluating an applicant for a pilot certificate or rating.

INSTRUCTIONAL--Flying while under the supervision of a flight instructor or receiving air carrier training. Personal proficiency flight operations and personal flight reviews, as required by federal air regulations, are excluded.

OTHER WORK USE--Miscellaneous flight operations conducted for compensation or hire such as construction work (not 14 CFR Part 135 operation), parachuting, aerial advertising, towing gliders, etc.

PERSONAL--Flying for personal reasons (excludes business transportation) including pleasure or personal transportation. This also includes practice or proficiency flights performed under flight instructor supervision and not part of an approved flight training program.

POSITIONING--Non-revenue flight conducted for the primary purpose of relocating the aircraft. Examples include moving the aircraft to a maintenance facility or to load passengers or cargo etc.

UNKNOWN--Use only if the primary purpose of flight is not known.

Other Aircraft--Collision: For all accidents involving a collision with another aircraft, including parked aircraft, check "Collision with other aircraft" under Basic Information and complete this section indicating details about the OTHER aircraft involved in the collision.

Airport Information: Complete this section if the accident/incident occurred on approach, landing, takeoff, departure, or within 3 statute miles of an airport. Please refer to the FAA Airport/Facility Directory or other official source for airport information.

Airport Identifier: Provide the official 3 or 4 character airport identifier number.

Runway: Indicate the number of the runway used, including L, R, or C if applicable.

Runway/Landing Surface: Indicate the type of intended runway/landing surface (do not indicate surface conditions). If the surface type was mixed, check all that apply.

Condition of Runway/Landing Surface: Indicate the condition of the intended runway/landing surface. If multiple conditions existed at the time of the accident, check all that apply.

Weather Information at the Accident/Incident Site: Indicate the weather conditions reported at the accident/incident site at the time of occurrence. If no weather reporting was available for the accident/incident site, indicate the reported conditions at the nearest reporting site. Specify the weather reporting site identifier, the observation time, and distance from the accident/incident.

Sky/Lowest Cloud Condition: Indicate the height above ground level of the lowest cloud condition present at the time of the accident/incident and whether coverage was reported as few, scattered, broken or overcast. Also indicate the height above ground level and coverage of the lowest cloud ceiling present at the time of the accident/incident (reported as broken or overcast).

NOTAMS (D and FDC), AIRMETs, SIGMETs, PIREPs: Describe all NOTAMS (distant (D) or Flight Data Center (FDC), if known), AIRMETs, SIGMETs, and PIREPs in effect near the accident/incident.

Flight Crewmember Information: Indicate the category that best describes the capacity served by this flight crewmember at the time of the accident. The designators "Flight Crewmember 1" and "Flight Crewmember 2" do not refer to a specific pilot position or responsibility. If more than one pilot is aboard, they may be entered in any order and their capacity entered as appropriate.

Degree of Injury: See Definitions on the top half of Page 1 of the instructions. Minor injury is not defined. If an injury does not meet the criteria for another injury category, select Minor.

Date of Last Flight Review or Equivalent: Enter the date of the most recent flight review, or equivalent, completed by this pilot. Refer to 14 CFR 61.56 for accepted equivalents.

Type Ratings: List all type ratings on the pilot certificate. If the pilot holds no type ratings indicate "none." If the pilot holds a pilot certificate other than student and was flying an aircraft requiring an endorsement, enter the type and date of any logbook endorsement(s) for that aircraft. See 14 CFR 61 for examples of required endorsements.

Student Endorsements: If the pilot holds a student pilot certificate, enter all solo endorsements and dates on the student pilot certificate.

Flight Time: Complete the flight time matrix. Solo flight time should be included as "Pilot-in-Command (PIC)" and all dual flight instruction given should be included as "Time as Instructor."

Additional Flight Crewmembers: Complete this section if there were more than two required flight crewmembers on the aircraft. This also includes a check airman performing official duties but does not include cabin crew. State the capacity served by each included crewmember at the time of the accident.

Passenger(s)/Other Personnel: Enter identification and injury severity information for all passengers, cabin crew, and other personnel involved in the accident. See Page 1 of the instructions for the official definition of injury levels.

Several questions throughout the form allow for multiple responses; when appropriate, choose all responses that apply.

These instructions only pertain to major issue areas covered by NTSB Form 6120.1 Pilot/Operator Aircraft Accident/Incident Report. For additional definitions of questions and responses, please refer to www.ntsbgov.

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Rollled on left side with destruction of rotor blade, side windows, tail cone, tail rotor, and gear boxes.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On 23 May 2022 at 10:41 EDT I proceeded with a training flight, occupying the right seat of the R44 helicopter. Robert Cloutier CFI (Chief Pilot CR Helicopters Nashua NH) occupied the left seat. The purpose of the flight was ongoing training to achieve endorsement to operate the R44 helicopter independently. I had received 10.5 hours of instruction in type in the prior 90 days. Mr. Cloutier provided 6.4 hours of that instruction. I hold a Private Pilot Rotorcraft-Helicopter rating.

After completing my preflight inspection no discrepancies were detected and the aircraft was in an Airworthy condition. The aircraft was transferred out of the hangar and positioned in front of the hangar.

Start-up sequence was uneventful and the pre take-off checklist was completed. Following this sequence Mr. Cloutier then questioned whether an external hatch was unfastened stating he thought he heard an unusual sound. I initiated a positive exchange of controls to Mr. Cloutier, stepped out of the right seat and confirmed all hatches were fastened. I re-entered the helicopter and again initiated positive exchange of controls to myself. I then performed a low RPM check prior to picking up the helicopter. Low RPM check was normal and no unusual noise/vibration were present. Prior to the first pick-up I mentioned that the wind was possibly greater than the reported 15 knots with potential gusts but I had previously determined the winds to be below my personal minimums.

Initial intention of training was to proceed to an apron/parking across from the hangar to perform a series of pick-up and set-down maneuvers. I performed the initial pick-up and proceeded to the apron. I was instructed to set-down in a position of my choice. I set down on the apron facing into the wind. as requested by Mr. Cloutier I picked the helicopter up again, moved forward approximately 15 feet and again set down with the helicopter positioned into the wind.

We paused briefly and Mr. Cloutier rolled the throttle down as he discussed achieving a "smoother" pick-up. I was instructed to pick the helicopter up and when I applied up-collective the low RPM warning sounded. I assumed this was because Mr. Cloutier rolled the throttle down while he was discussing pick-up technique and I lifted the collective above the full-down position prior to achieving greater than 97% rotor PRM which resulted in the low RPM horn sounding. Mr. Cloutier stated he felt the low RPM horn sounded because I was "over-gripping" the throttle and interfering with the governor action. With the warning I returned the collective to full-down position and paused to assess the situation, focusing on rotor RPM. Over-gripping the throttle can lead to overriding the governor but in this case it was evident the low RPM sounded due to the collective being raised off the full-down position prematurely since the low RPM warning corresponded directly with the small collective motion. Had the instructor had his left hand on the collective or investigated the low RPM warning, the root cause of the low RPM warning might have been realized.

Instruction continued at a rapid pace and I paused briefly to confirm rotor RPM was in the normal range for pick-up. I was then instructed by Mr. Cloutier to change my technique for pick-up. I was advised to "cup" my left hand over the end of the collective rather than utilizing my previous method of gripping the collective with my left hand, placing two fingers on the steel portion and two fingers on the padded region. I was not clear about the exact hand position he was instructing me to use and informed him. He clarified by placing his right hand in the position he was suggesting cupping of the hand over the end of the collective, demonstrating the motion/position without contacting my collective control. I proceeded to pick the helicopter up with that method of hand-grip on the collective. Mr. Cloutier commented "better" as I set down in a position several feet forward or the previous position on the apron. Rotor RPM remained in the normal range. Prior to set down I returned my hand position to my normal grip technique because I felt uncomfortable with the "cupping" position suggested.

CONTINUED ON PAGE BELOW

RECOMMENDATION (How could this accident/incident have been prevented?)**Operator/Owner Safety Recommendation**

This accident occurred in a training environment that without question lacked adequate cockpit resource management. The instructor failed to use an appropriate pace of instruction or positive exchange of controls to clarify control input authority and did not clearly communicate his intentions of instruction or control of the rotorcraft.

While altering flight techniques during instruction is sometimes essential, it might be best accomplished in a post-flight briefing but if it is to be accomplished in flight, the instructor must guard the control of the rotorcraft and always utilize established safety protocols. The use of unorthodox and potentially unsafe control inputs should never be employed by an instructor.

In this case, factors that led to the accident also include complacency and over-confidence on the part of the instructor. My position of a student seeking additional rotorcraft endorsement led to placing myself in a subservient position that did not aid in redirecting the environment towards correct cockpit resource management.

Preventing this type of accident remains elusive. As pilots, we train to develop confidence. But when confidence is transformed to hubris there will always be a potential for this type of accident to recur. One way to reduce that would be to recognize that while a high-time, senior /chief pilot's experience is usually an asset, the potential for an inadvertent safety breach is real. This should be elaborated on during CFI recurrent training. In addition, there is no role for ad hoc alteration of fundamental flight control management during instruction outside of a flight testing environment.

CONTINUED NARRATIVE HISTORY OF FLIGHT

At this point positive exchange of controls was not utilized and the tempo of the instruction remained rapid, leading to some hesitation on my part. Mr. Cloutier took sole control of the aircraft. In doing so he proceeded to grip the right seat collective with his right hand and the left seat cyclic grip with his left hand. He began discussing the pick-up sequence. I commented with the statement "you are crossed controlled". At that time Mr. Cloutier continued to discuss the pick-up sequence with rotor RPM in the normal range. Within perhaps 1-2 seconds I considered that Mr. Cloutier might be proceeding with a pick-up of the helicopter with the unconventional control grip as noted (his left hand on the left seat cyclic and right hand on the right seat collective). The helicopter then slid to the left, lifted off the ground with a nose high attitude and rolled to the left and rearward. I believe the helicopter achieved at least several feet of altitude but had altered perception because of the rapid rearward/rolling motion. The helicopter descended and struck the left side. Once stationary I reached up and to the right to shut the Master switch off. A bystander assisted by opening my (right) cockpit door and I climbed up and out of the aircraft followed by Mr. Cloutier.
