Bent Nose Wheel Strut
Bent Propeller
Scraped Fiberglass under nose wheel

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On approach into KHEF. I came in level and centered to the runway with the pre-landing checklist completed. It was around 10:30am on approach to landing and i had the current ATIS information. I had 40 degrees of flaps coming in to slow me down, the airspeed indicator was reading about 80mph during my glide slope onto the runway. I aimed for the 1000 footer markings, as thats what i had practiced throughout my flight training. When i was in ground effect at 1000 foot markings, i pulled the power to idle and held my nose up at which point when the main wheels touched down the plane bounced and i was still holding the nose up when it bounced for the second time and i didnt have enough lift being generated to keep the nose up and when the nose wheel hit the ground and bent backward when the nose wheel felt wobbly while rolling down the runway for about 150 feet and was making the plane veer off to the right at which point the nose wheel gave out and bent backwards and I completely leaned out the mixture, turned master off and the ignition to off. The proceeded to exit the plane via the door.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

This could've been prevented by performing a go-around and coming back in for a cleaner landing setup.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No
