NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On Wednesday 07/13/22 I flew the 150 to the Sherman field in Pembroke. The Sherman field is a small grass strip airfield in Pembroke Ma identifier is MA63

The Sherman Field is attached to my new residence at 210 Barker St Pembroke. This was my third landing on the Sherman Field. I usually keep my plane hangared at Lawrence Municipal airport.

I felt the landing on the grass strip was a particularly sloppy landing, too fast, too steep plus the landing roll was un-coordinated and bouncy. I pride myself in making good landings, so I was very disappointed with myself.

I inspected the plane the next day 07/14/22 before flying and noticed that all the hydraulic oil had leaked out of the seals on the piston. I figured I had compromised the seals on the bad landing leading to the leak. I never thought to inspect the front wheel through bolt.

I canceled my flight back to Lawrence and goggled how to get oil and air back into the strut. On Friday 07/15/22 I went up to Lawrence Airmotive and borrowed what I needed to do a field repair.

On Sunday morning 07/17/22, I followed the instructions and got the hydraulic oil into the piston. But for some reason the piston would not take the required 21lbs of pressure needed to soften the damper action. I realize now that I should have taken oil out to create room for some air.

At this stage now the strut is fully extended and ridged. It was a perfect morning, no wind, and no rain, excellent VFR conditions. This was Sunday morning at 10:20

My trip to Cranland was only four mile. I figured I would land on the asphalt and ask someone to help me improve the damper situation before commencing to Lawrence airport. I flew an extended base and lined up for a final approach on 18.

I came in a little hard and I forgot about the extended nose wheel condition.

It was like I landed on 3 points instead of the two main wheels. I could feel, at least I felt I could feel, the wheel breaking away and as momentum moved me forward I could see the nose wheel running into the grass in my peripheral vision. The nose of the plane kept moving forward but kept dropping as the strut buckled. Then the prop hit and she just dug in to a stop. I switched off the master and ignition and got out of there. There was a fly-in at Cranland that morning, some very nice people tilted the plane back to a normal position and we pushed it onto the grass.

On last look at the strut, it was fully extended and ridged.

A couple of very nice fellas removed the wings later in the day and prepped it for transport up to Lawrence.

I will forward a Jpeg file of my poor landing at Sherman Field.

I feel it might have bearing on events.

Eamon

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

My biggest regret is I failed to make a proper repair of the strut. I feel if I had of introduced the 21lbs of air that was required. The damper would have worked correctly and would have absorbed the shock.
Once the wheel had broke away, all I could do was hold the nose off as long as I could to dissipate the energy and speed. The crash was inevitable.
My approach was too fast, too steep and I failed to appreciate that the front strut was extended and ridged and had no damper mitigation.
