Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

There was major damage to the belly just forward of the gear door area. The tail boom was torn at the vertical stabilizer area. Vertical stabilizer was damaged at the horizontal stabilizer attach points. The horizontal stabilizer was damaged at the attach points. The left wing tip was damaged.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Local glider flight started around 1:15 EDT towing from Butler Ga 6A1 runway 01. Wind was less than 4 knot from the SE. Sky was clear with cumulus at 3500 agl. Releasing tow at 2100 agl in weak lift I was only able to climb to 2400 agl maximum during the flight. After approximately 30 minutes struggling to stay up I decided to land and at approximately 1100 feet agl entered a left crosswind for the grass parallel to the paved RWY 19. Apparently I lowered the gear on crosswind. I made a CTAF announcement on crosswind, " Butler traffic glider BL on left crosswind landing RWY 19 on the grass Butler. " I don't remember anything about the downwind when I usually check if the gear handle is in the fully locked down position. While turning final around 300 feet agl a Gatoraid bottle fell from the turtle deck area to the space between the seat back and my right elbow, interfering with my arm movement. I don't remember how I cleared the bottle. After I cleared the bottle I checked airspeed, 70 knot, little fast but ok, approach looked good, should touch down and roll out where I want. Gear ? Suddenly I didn't remember putting the gear down or if I checked the gear on downwind. A panic comes over me and I grab the gear handle (which was in the down position) and attempt to raise the gear. As I am raising the gear the glider strikes the ground and pitches up, goes airborne, then pitches downward and strikes the ground a second time.

The glider came to rest approximately 15 feet to the right of the runway centerline and pointed toward the southwest. It was intact with the exception of the canopy which was detached from the glider and lying on the ground approximately 5 feet forward of the cockpit area.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Dehydration was a factor. On Friday, the day before the accident I did yard work in the heat, having to stop and come inside 3 times to cool off in the air conditioning before I was done. On the day of the accident it was 90 F and 60 % RH when I spent 2 hours assembling the glider before the flight. The flight was busy due to the weak lift and I didn't get a chance to drink any of the Gatoraid. Dehydration is known to cause short term memory loss and confusion.

Verbalizing checklist would help short term memory issue.
