

NATIONAL TRANSPORTATION SAFETY BOARD

NTSB Form 6120.1

PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

Email the pilot/operator aircraft accident/incident report to the investigator-in-charge of your accident/incident. If email is not available, mail the report per the instructions below.

If your accident/incident occurred in Maine, Vermont, New Hampshire, Massachusetts, Connecticut, Rhode Island, New York, New Jersey, Pennsylvania, Maryland, Delaware, Virginia, West Virginia, Kentucky, Tennessee, North Carolina, South Carolina, Mississippi, Alabama, Georgia, Florida, the District of Columbia, Puerto Rico, or the US Virgin Islands, send the form to: NTSB, ERA, 45065 Riverside Parkway, Ashburn, VA 20147.

If your accident/incident occurred in Ohio, Michigan, Indiana, Wisconsin, Illinois, Minnesota, Iowa, Missouri, Arkansas, Louisiana, North Dakota, South Dakota, Nebraska, Kansas, Oklahoma, Texas, Colorado, or New Mexico, send the form to: NTSB, CEN, 4760 Oakland Street, Suite 500, Denver, CO 80239.

If your accident/incident occurred in Montana, Wyoming, Idaho, Utah, Arizona, Nevada, Washington, Oregon, California, Hawaii, or the territories of Guam or American Samoa, send the form to: NTSB, WPR, 505 South 336th Street, Suite 540, Federal Way, WA 98003.

If your accident/incident occurred in Alaska, send the form to: NTSB, ANC, 222 West 7th Avenue, Room 216, Box 11, Anchorage, AK 99513.

Rules pertaining to notification of aircraft accidents and incidents, as well as overdue aircraft are found in 49 *Code of Federal Regulations* (CFR) Part 830 http://www.ecfr.gov/cgi-bin/text-idx?c=ecfr&tpl=/ecfrbrowse/Title49/49cfr830_main_02.tpl. These rules state the authority of the NTSB, define accidents, incidents, injuries, and other terms, and provide procedures for initial and immediate notification of accidents and incidents by aircraft pilots/operators.

A. APPLICABILITY

The pilot/operator of an aircraft shall send a report to the office listed above, based on accident/incident location; immediate notification is required by 49 CFR 830.5(a). **The report shall be filed within 10 days after an accident for which notification is required by Section 830.5, or after 7 days if an overdue aircraft is still missing.**

An aircraft accident, as defined in 49 CFR 830.2, is determined as an occurrence that involves a fatality or serious injury, or substantial damage to the aircraft. For occurrences that do not involve a fatality, the determination that the occurrence is an accident can be appealed by writing to the Director, Office of Aviation Safety, NTSB, 490 L'Enfant Plaza, S.W., Washington, D.C. 20594.

INSTRUCTIONS TO PILOTS/OPERATORS FOR COMPLETING THIS FORM

It is necessary that ALL questions on this report be answered completely and accurately.

If more space is needed, continue on a blank sheet of paper.

Nearest City/Place: Use the name of the nearest community in the state where the accident/incident occurred.

Date/Time: Indicate the date and local time of the event. Be sure to indicate the time zone.

Phase of Operation: Indicate the phase of operation during which the accident/incident occurred.

Aircraft Information: Enter aircraft make and model information as indicated on the aircraft registration certificate, including series. If the involved aircraft is certified as "amateur-built," include the name of the producer of the kit or plans, unless an NTSB employee instructs otherwise.

Maximum Gross Weight: Enter the certificated maximum gross weight for the aircraft involved in the occurrence. This should be the same as the maximum gross weight indicated on the aircraft weight and balance documents.

Engine: Enter engine make and model information as indicated on the engine data plate.

The NTSB uses this form for aircraft accident prevention activities and for statistical purposes. NTSB regulations (49 CFR Part 830) require that **ALL** questions be answered completely and accurately. Completion of this form will take approximately 60 minutes. The NTSB does not guarantee the privacy of any information provided in this form. You need not complete this form unless it displays a valid OMB control number, in accordance with 5 C.F.R. § 1320.5(b), which applies to this collection of information.

B. DEFINITIONS

1. "Aircraft Accident" means an occurrence associated with the operation of an aircraft that takes place between the time any person boards the aircraft with the intention of flight and all such persons have disembarked, and in which any person suffers death, or serious injury, or in which the aircraft receives substantial damage. For purposes of this form, the definition of "aircraft accident" includes "unmanned aircraft accident," as defined at 49 CFR 830.2.

2. "Substantial Damage" means damage or failure that adversely affects the structural strength, performance or flight characteristics of the aircraft, and that would normally require major repair or replacement of the affected component. NOTE: Engine failure or damage limited to an engine if only one engine fails or is damaged, bent fairing or cowlings, dented skin, small puncture holes in the skin or fabric, ground damage to rotor or propeller blades, and damage to landing gear, wheels, tires, flaps, engine accessories, brakes, or wing tips are not considered "substantial damage" for purposes of this report.

3. "Operator" means any person who causes or authorizes the operation of an aircraft, such as the owner, lessee, or bailee of an aircraft.

4. "Fatal Injury" means any injury that results in death within thirty (30) days of the accident.

5. "Serious Injury" means any injury that (1) requires hospitalization for more than 48 hours, commencing within 7 days from the date the injury was received; (2) results in a fracture of any bone (except simple fracture of fingers, toes, or nose); (3) causes severe hemorrhages, nerve, muscle, or tendon damage; (4) involves injury to any internal organ; or (5) involves second- or third-degree burns, or any burns affecting more than 5 percent of the body surface.

Type of Fire Extinguishing System: If a fire extinguishing system was used to fight an aircraft fire, specify the type(s) of extinguishing system(s) used. Examples include handheld extinguisher, engine fire bottle, cargo/baggage compartment fire suppression system, or airport emergency ground equipment.

Owner/Operator Information: Enter the owner information as shown on the registration certificate. Commercial operators, enter the operator information, including "doing business as" when applicable, as shown on the operator certificate.

Revenue Sightseeing Flight: Indicate whether the accident aircraft was conducting **revenue** sightseeing operations under 14 CFR Part 91 at the time of the accident.

Air Medical Flight: Indicate whether the accident flight was being conducted for the purpose of carrying medical personnel, patient(s), or organs.

Public Aircraft: Federal, state or local government flight operations such as official travel, law-enforcement, low-level observation, aerial application, firefighting, search and rescue, biological or geological resource management, or aeronautical research. Indicate whether the flight was conducted by the armed forces, federal, state, or local government.

Purpose of Flight: 14 CFR Parts 91, 103, 133, 136, and 137: Indicate the type of operation that was being conducted at the time of the occurrence using the following definitions:

AERIAL APPLICATION--Operations using an aircraft to perform aerial application or dispersion of any substance. Examples include agricultural, health, forestry, cloud seeding, firefighting, insect control, etc.

AERIAL OBSERVATION--These flights include aerial mapping/photography, patrol, search and rescue, hunting, highway traffic advisory, ranching, surveillance, oil and mineral exploration, criminal pursuit, fish spotting, etc.

AIR DROP--Aerial operations, other than aerial application, that are intended to release items in flight.

AIR RACE/SHOW--Includes any flight operations conducted as part of an organized air race or public demonstration.

BUSINESS--includes all personal flying without a paid professional crew for reasons associated with furthering a business, including transportation to and from business meetings or work. This does not include corporate/executive operations, air taxi, or commuter operations.

EXECUTIVE/CORPORATE--Company flying with a paid, professional crew.

FERRY--Non-revenue flight under a special flight or "ferry" permit. Refer to 14 CFR 21.197 for details of special flight permit issuance.

FLIGHT TEST--Flight for the purpose of investigating the flight characteristics of an aircraft/aircraft component or evaluating an applicant for a pilot certificate or rating.

INSTRUCTIONAL--Flying while under the supervision of a flight instructor or receiving air carrier training. Personal proficiency flight operations and personal flight reviews, as required by federal air regulations, are excluded.

OTHER WORK USE--Miscellaneous flight operations conducted for compensation or hire such as construction work (not 14 CFR Part 135 operation), parachuting, aerial advertising, towing gliders, etc.

PERSONAL--Flying for personal reasons (excludes business transportation) including pleasure or personal transportation. This also includes practice or proficiency flights performed under flight instructor supervision and not part of an approved flight training program.

POSITIONING--Non-revenue flight conducted for the primary purpose of relocating the aircraft. Examples include moving the aircraft to a maintenance facility or to load passengers or cargo etc.

UNKNOWN--Use only if the primary purpose of flight is not known.

Other Aircraft--Collision: For all accidents involving a collision with another aircraft, including parked aircraft, check "Collision with other aircraft" under Basic Information and complete this section indicating details about the OTHER aircraft involved in the collision.

Airport Information: Complete this section if the accident/incident occurred on approach, landing, takeoff, departure, or within 3 statute miles of an airport. Please refer to the FAA Airport/Facility Directory or other official source for airport information.

Airport Identifier: Provide the official 3 or 4 character airport identifier number.

Runway: Indicate the number of the runway used, including L, R, or C if applicable.

Runway/Landing Surface: Indicate the type of intended runway/landing surface (do not indicate surface conditions). If the surface type was mixed, check all that apply.

Condition of Runway/Landing Surface: Indicate the condition of the intended runway/landing surface. If multiple conditions existed at the time of the accident, check all that apply.

Weather Information at the Accident/Incident Site: Indicate the weather conditions reported at the accident/incident site at the time of occurrence. If no weather reporting was available for the accident/incident site, indicate the reported conditions at the nearest reporting site. Specify the weather reporting site identifier, the observation time, and distance from the accident/incident.

Sky/Lowest Cloud Condition: Indicate the height above ground level of the lowest cloud condition present at the time of the accident/incident and whether coverage was reported as few, scattered, broken or overcast. Also indicate the height above ground level and coverage of the lowest cloud ceiling present at the time of the accident/incident (reported as broken or overcast).

NOTAMS (D and FDC), AIRMETs, SIGMETs, PIREPs: Describe all NOTAMS (distant (D) or Flight Data Center (FDC), if known), AIRMETs, SIGMETs, and PIREPs in effect near the accident/incident.

Flight Crewmember Information: Indicate the category that best describes the capacity served by this flight crewmember at the time of the accident. The designators "Flight Crewmember 1" and "Flight Crewmember 2" do not refer to a specific pilot position or responsibility. If more than one pilot is aboard, they may be entered in any order and their capacity entered as appropriate.

Degree of Injury: See Definitions on the top half of Page 1 of the instructions. Minor injury is not defined. If an injury does not meet the criteria for another injury category, select Minor.

Date of Last Flight Review or Equivalent: Enter the date of the most recent flight review, or equivalent, completed by this pilot. Refer to 14 CFR 61.56 for accepted equivalents.

Type Ratings: List all type ratings on the pilot certificate. If the pilot holds no type ratings indicate "none." If the pilot holds a pilot certificate other than student and was flying an aircraft requiring an endorsement, enter the type and date of any logbook endorsement(s) for that aircraft. See 14 CFR 61 for examples of required endorsements.

Student Endorsements: If the pilot holds a student pilot certificate, enter all solo endorsements and dates on the student pilot certificate.

Flight Time: Complete the flight time matrix. Solo flight time should be included as "Pilot-in-Command (PIC)" and all dual flight instruction given should be included as "Time as Instructor."

Additional Flight Crewmembers: Complete this section if there were more than two required flight crewmembers on the aircraft. This also includes a check airman performing official duties but does not include cabin crew. State the capacity served by each included crewmember at the time of the accident.

Passenger(s)/Other Personnel: Enter identification and injury severity information for all passengers, cabin crew, and other personnel involved in the accident. See Page 1 of the instructions for the official definition of injury levels.

Several questions throughout the form allow for multiple responses; when appropriate, choose all responses that apply.

These instructions only pertain to major issue areas covered by NTSB Form 6120.1 Pilot/Operator Aircraft Accident/Incident Report. For additional definitions of questions and responses, please refer to www.nts.gov.

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Ventral Fin broke off aircraft.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

See Report of Pilot Dawson Simmons sent in separate file by email.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

While training and experience are necessary to achieve proficiency in conducting "glassy water landings", recency can certainly come into play. This situation was one where initial training was likely sufficient as was recurrent and differences training prior to check ride for the operation. Mr. Simmons received training from both the director of operations and chief pilot (both company instructors) in glassy water landings in actual glassy water conditions. True glassy water situations are sometimes infrequent and currency in procedure may have helped in this situation.

There has always been concern by some instructors that simulated glassy water operations are simply not the same as true glassy water conditions. If Mr. Simmons were a novice pilot with a new seaplane rating, there may have been more of a concern for his training and experience. More training and assessment may have helped in this situation, hence, we will be reviewing our training procedures specifically around this as well as other more technical seaplane operations.

On Wednesday September 7, 2022, I, Dawson Simmons, was dispatched to do a flight into Katahdin Lake from Katahdin Air base on Ambajejus lake with two Baxter State Park rangers, Rob Tice and Dan Rinard. I had already pre-flighted the aircraft and checked the fuel onboard for my flight. Fuel onboard of 15/20.

I loaded two backpacks and one set of hiking poles into the 3rd row seating area of the aircraft. Passenger Rob Tice got into the airplane into the Co-pilot seat and passenger Dan Rinard got into the second-row seat behind the co-pilot seat. At this time both passengers were briefed about the flight and seatbelts were verified on.

I taxied 756SG out on Ambajejus lake and took off at approximately 8:13AM. Flight was about 10 minutes to Katahdin Lake. The passengers requested a fly over a couple locations they wanted to see that they would hike back into and check on. I circled Katahdin Lake looking for rocks and debris in the water. I observed only a few patches of some type of vegetation on the lake. Katahdin Lake was smooth and glassy water. At this time I configured for a glassy water landing. As I came across the end of the lake the flaps were set at 10 degrees and 80 mile per hour air speed. When I crossed my last visual reference, the plane was on a stable approach. I impacted the surface of the water hard. Upon impact I bounced, and I applied full power. Once power was applied and at a positive rate of climb, I checked in on the passengers. Rob stated, "I am ok." I could visibly see that Dan's nose was bleeding. Dan stated, "I am ok, my nose is bleeding though." We did not have any paper towels, so Rob and I gave Dan a facemask to start applying pressure to his nose with. At this time, I setup for another glassy water landing which was successful and uneventful.

I beached the aircraft with the nose forward. The 2 passengers and I exited the aircraft on our own power. I did not see any visible signs of injury aside from Dan's bleeding nose. I unloaded the backpacks from the aircraft along with the first aid kit. Rob administered first aid to Dan and Dan washed his face off with some water from the lake. At this time Dan's nose had almost stopped bleeding. There was a visible cut on the left side of Dan's nose. Dan stated, "I do not think it is broken, I think it was just a bloody nose." Dan checked his nose using his cellphone camera to see what it looked like. As I observed both passengers on the beach near the aircraft, they were alert and oriented and conversating with me with no signs of further injury.

Rob left to walk up and check on the camp. I started looking the plane over. I checked the floats, the attachment points and did not see any wrinkling, cracks, or anything missing. All the doors opened and closed properly. Rob returned and we had a conversation about whether they would stay or return to Katahdin Air base. Dan stated, "I am getting a slight headache, so it is probably best if we do go back out."

I loaded the backpacks and hiking poles back into the airplane and secured the doors. Both passengers, Rob and Dan, walked themselves back to the airplane, along the floats and up the steps into the aircraft. Rob sat in the co-pilot seat and Dan sat in the second row behind the co-pilot seat. I used the front cable on the airplane to push the airplane back off the beach. I stepped up on the float and got into the airplane. I checked for seatbelts, taxied out, set the trim and applied full power for takeoff. I set the flaps at 20 degrees. I took off of Katahdin Lake to head back to Katahdin Air base on Ambajejus lake. I landed at Ambajejus lake at approximately 9:05AM. Both passengers exited the aircraft with their own power. I walked to the other side of the plane to access the cargo doors and remove the backpacks and poles. Each passenger Rob and Dan carried their own backpacks back to their vehicles and put their backpacks inside.

I heard Rob ask Dan if he was ok to drive and witnessed Rob checking Dan's eye movements prior to driving. Dan stated "Yes, I am ok to drive."

Rob and Dan stayed and talked about what to do on their next trip into Katahdin Lake. I reported back into the Katahdin Air office when the flight follower stated that I had a one-hour scenic tour coming up. I went back to the dock to fuel the aircraft and turn the aircraft around. When I turned the aircraft around, I saw that the ventral fin was missing. I immediately stopped everything and went back into the Katahdin Air office to call Chief Pilot Jim Strang. I called Jim at approximately 9:09 to report that 756SG had a hard landing on Katahdin Lake and a passenger had a bloody nose. Jim said "ok, we will ground 756SG at this time. I will fly the one-hour scenic flight and we will look over 6SG when I return."

During this time Dan had left driving and Rob stayed to speak with Jim. Once Rob finished talking with Jim he departed the parking lot driving.

Jim then contacted Penobscot Island Air Chief Pilot Scott Story. At this time I knew that 756Sg was grounded and I did not fly any more flights for the remainder of the day on September 7, 2022.

On the morning of September 8, 2022 I was informed by Chief Pilot Jim Strang that I needed to go get a drug screening. I left at that time for Bangor, ME where I obtained the drug screening.
