Email Report

The Vehicle Recorder Division received the following electronic device: **Appareo Stratus 3i, Stratus3i002671**

The device is pictured in **Stratus3i.jpg**. The device was in good condition and powered normally when connected to a voltage supply. The device was connected via Wifi to an NTSB owned iPad running the electronic flight bag (EFB) application ForeFlight. The device communicated with ForeFlight successfully. The device's track log history was explored. The last tracklog was recorded on August 3, 2022. The accident occurred on October 17, 2022.

The device's page of ForeFlight was then examined. A screenshot of the device page is attached as **DevicePage.jpg**. The device page showed that "Logging" was turned off in the menu. With "Logging" turned off, the device will not record data. Note that "Flight Data Recorder" is toggled to "On". Note that "Flight Data Recorder" enables a higher fidelity (5Hz) recording when turned on, but will not activate if "Logging" is turned off.

Alternatively, the manufacturer provided a secondary method to download the device via WiFi outside of the Foreflight app. The alternative download was conducted successfully. The alternative download showed the last recorded tracklog was consistent with the date of the last recorded tracklog on the ForeFlight EFB page.

No data relevant to accident was recovered from the device.
