

NATIONAL TRANSPORTATION SAFETY BOARD • PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT Use this form (Form 6120.1) to report civil and public aircraft accidents and incidents

BASIC INFORMATION
Accident/Incident Location

 Nearest City/Place: Norwich State: NY

 ZIP: 13815 Country: USA

 Latitude: 42.5312N Longitude: 75.5235W

(Enter in decimal degrees or degrees:minutes:seconds)

Accident/Incident Date/Time

 Date: 05/28/2023 Local Time: 14:40
 mm/dd/yyyy HH:MM

 Time Zone: east

 Collision with Other Aircraft: ☐ Midair ☐ On-ground ☒ None

AIRCRAFT INFORMATION

 Registration Number: N8775X

 Manufacturer: Cessna

 Model: 182-D

 Serial Number: 18253175

 Year of Manufacture: 1,961

 Amateur-Built: ☐ Yes ☒ No If Yes: ☐ Original Design ☐ Kit/Plans

Make: _____

- ☐
- IFR-Equipped and Certified
-
- ☐
- Commercial Space Flight
-
- ☐
- Unmanned Aircraft

 Maximum Gross Weight: 2,950 lbs.

 Weight at Time of Accident/Incident: 1,950 lbs.

 Number of Seats: 1 Flight Crew Seats: _____

 Cabin Crew Seats: 0 Passenger Seats: 0

 Number of Engines: 1

Description of Damage to Aircraft and Other Property (Use additional sheet, if necessary.)

Propeller ripped off. one wing ripped off. nose into ground impact. impact into wooded gulley/ravine area.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink.)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On May 28th 2023, Skydiving operations started for the day at Just Jump Skydiving location KOIC airport in Norwich NY. Pilot did precheck of N8775X prior to start of jump operations. He informed me he found no issues and he had ~40 gallons of fuel to the best of my recollection, ready to start flying when we were. Pilot has fuel key on keys to plane. Fuel is onsite. Fuel had been added to the plane the night prior with records showing a purchase of 30.30 gallons being added to N8775X. The day started with two flights that were uneventful. Those two flights were relatively close together with little time between. Then there was at least an hour between the second the third flight. When jumpers wanted to go up for another flight, I confirmed with the pilot if he was ready. He did not indicate any reason no to do another flight. The third flight went to ~10,000 agl. Jumpers exited without incident. This flight left from KOIC, jumpers returned to KOIC under parachutes without incidence, no jumper reported any concern. The pilot was expected to land at KOIC. On descent, the pilot announced in his usual way he was about midway down. Then a call on radio was heard in a rushed voice, but not intelligible. The plane did not land at the airport. We attempted to contact the pilot several times, but there was no response. We tried to track the plane. We heard sirens and started to search flight aware to track the plane's path. We responded to a nearby field where the pilot crashed into trees. Departure was around 1422, the crash was around 1452 on 28 May 2025. It was a clear day, with no/light wind. There was a student pilot practicing in the pattern around that time, but I have no indication there was any interference due to that. We had a fuel stick that was not for that plane's tank, but the pilot was aware of this and had previously made a conversion chart to know what calibrated readings indicate. Radio communications with Boston Center were in place with an assigned transponder code.

OPERATOR/OWNER SAFETY RECOMMENDATION (How could this accident/incident have been prevented?)

Looking in retrospect, this likely was an avoidable incident, if final determination is fuel starvation. We had a conversion chart for our dipstick to give us appropriate fuel levels, but using a conversion is an additional step. With the down time between the second and third lift, there was plenty of time to refuel. This was not done by the pilot- I don't know why. A standing policy has now been set up that there is a required minimum of 15 gallons per wing prior to take off in our other plane. Pilot is now instructed to check fuel and confirm with all jumper getting in plane fuel level. Also, standing rule is now the pilot will attempt to stay in glide distance on climb out and descent - traffic permitting. We now have only one fuel stick that has been confirmed for accuracy from a local mechanic. Pilot is instructed to record fuel at prior to every flight in flight log book.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
