

NATIONAL TRANSPORTATION SAFETY BOARD
PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT
 This form to be used for reporting civil and public aircraft accidents and incidents

BASIC INFORMATION

Accident/Incident Location

Nearest City/Place: Springfield State: OH
 ZIP: 45502 Country: USA
 Latitude: 39.887822 Longitude: -83.746444
 (Enter in decimal degrees or degrees:minutes:seconds)

Accident/Incident Date/Time

Date: 07/29/2023 Local Time: 12:06
 mm/dd/yyyy Time Zone: EDT

Collision with Other Aircraft: ☐ Midair ☐ On-ground ☒ None

AIRCRAFT INFORMATION

Registration Number: N652HA

Manufacturer: Bell Helicopter Textron Canada

Model: 206-L4

Serial Number: 52175

Year of Manufacture: 1996

Amateur-Built: ☐ Yes ☒ No If Yes: ☐ Kit/Plans Make: _____
☐ Original Design

- ☐ IFR-Equipped and Certified
☐ Commercial Space Flight
☐ Unmanned Aircraft

Maximum Gross Weight: 4450 lbs
 Weight at Time of Accident/Incident: 3458 (est.) lbs

Number of Seats: 7 Flight Crew Seats: 2
 Cabin Crew Seats: 0 Passenger Seats: 5

Number of Engines: 1

Category of Aircraft

- ☐ Airplane
☐ Balloon
☐ Blimp/Dirigible
☐ Glider
☐ Gyroplane
☒ Helicopter
☐ Powered Lift
☐ Rocket
☐ Ultralight
☐ Unknown

Type of Airworthiness Certificate

(Check all that apply)

NOTAMs (D and FDC), AIRMETs, SIGMETs, PIREPs in effect at the time of the accident/incident:

DAMAGE TO AIRCRAFT AND OTHER PROPERTY**Aircraft Damage**

- ☐ None ☐ Substantial
☐ Minor ☒ Destroyed
 ☐ Unknown

Aircraft Fire

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Fire at Unknown Time
☐ On-Ground ☐ Unknown

Aircraft Explosion

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Explosion at Unknown Time
☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

The right side of the fuselage was heavily damaged. The tailboom was separated approximately two feet aft of the fuselage. The main rotor blades were separated approximately two feet from each blade root. The pitch-control rods that normally connect the swashplate with the main rotor blades had been pinched and broken. The skids were partially separated from the fuselage. The spray booms were both separated from the aircraft. The plexiglass windscreen was shattered. There was extensive damage within the cockpit.

Regarding the power lines: of the three wires in that set (not including the static lines at the top of the poles), two were broken. The "H" pole (the one inside the field itself) suffered damage, particularly to the cross braces and top structures.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Isaac departed eastbound from an off-airport location approximately 39.866850, -83.916077, around 11:52 am. He had just taken on fuel and product (aka spray mix). He had expressed his intention to work on a cluster of fields, then meet his ground crew at another off-airport location (near 39.895201, -83.672751). While spraying the field where the accident took place, on an easterly pass, it appears he collided with wires, lost control, and crashed in the field just east of the wires. The time was approximately 12:06 pm. The set of wires runs roughly northeast-southwest, crossing over the field and I-70 just to the north. There is another set of wires along the southern border of the field, and a billboard just west of the wires that were struck. There are buildings and a farmhouse at the west end of the field, and I-70 runs adjacent the norther border. The field itself is of gently undulating terrain.

Isaac had been working at that field for several minutes prior to the accident.

While there was some sparse wreckage near the wires and along the path to the main wreckage, the main wreckage was contained in a relatively small area, including the separated tailboom and main rotor blades.

RECOMMENDATION (How could this accident/incident have been prevented?)**Operator/Owner Safety Recommendation**

Wires are a primary hazard in agricultural aviation. While we don't presently know what led to Isaac hitting these wires, it is possible that it was due to a lapse in concentration and/or situational awareness. Anything that can be done to maintain both, especially when working in the presence of wires, is of paramount importance. Some of us at Helicopter Applicators have already taken the Utilities/Aviation Specialists "Flying in the Wire Environment" course. This course is something that I think should be incorporated into our company training. All of the pilots at Helicopter Applicators are experienced with working around wires. To build upon, enhance, and harness that experience, I think we should have more "round table" discussions about working within the wire environment, to share such experience and strategies between all of our pilots.

Ideally, wires should be buried underground. If they cannot be buried, they should be made more visible in any way possible, such as aerial marker balls, high-visibility markings, reflective coatings, etc. It is not uncommon for pilots to lose track of or forget about wires they have been flying around, so making wires more visible is not just about initial observation and identification; it is also about reacquiring them as easily and rapidly as possible.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)
