

Robert Gretz
Senior Air Safety Investigator
Eastern Region Aviation

Date: 10/16/2023

Subject: ERA23FA380

Contact: Josh Berman, Pilot Support Team Manager, ForeFlight

The following was extracted from an email sent by Mr. Berman to NTSB staff:

"...That screenshot shows radar received via the Internet, not ADS-B. This is based on the colors and resolution of the radar image, as well as the fact that the storm tracks and Storm Cell Attribute icons (the blue/white circles that indicate hail) are shown - those are not available from ADS-B.

The timestamp is the time when the radar was most recently updated. In this case, at 11:15 PM EDT. The color of the timestamp (white) indicates that the radar is less than 25 minutes old at the time of the screenshot. eg: actual time would have been no later than 11:40 PM EDT...."
