Case Report Summary

Dispatched to the listed address on the crash of an ultra

Case Report Details

On October 16, 2022 at approximately 0930 A.M. I received a phone call from Officer Anthony Wynn advising he was en route to a plane crash with injuries. The caller told 911 the plane was an ultra light and the pilot had a broken femur. I asked Officer Wynn to have dispatch contact the FAA and to see if any local agencies had a drone available for aerial pictures.

Upon my arrival Officer Wynn told me New Lebanon Rescue Squad had transported the victim to Miami Valley Hospital. Kettering Police Department was going to be en route with a drone and we were waiting on a call from FAA.

While taking photographs of the scene, Robert Craig from the Cincinnati Office of the FAA called. Craig advised he was a Safety Inspector with the FAA Flight Standards District Office and he would be responding to the scene. I advised Craig we had a drone on the way to take aerial photos and we would also be mapping the scene for him. Craig asked if there were any witnesses to the crash, I told him yes.

While waiting for Craig to arrive I spoke with the witness, Steve Goeke. Goeke told me the pilot, Ted Lawson, was a friend of his and he was practicing landings and take offs. After taking off, Lawson banked to the right and the wing lost lift. Lawson did not have enough speed at the time he made the turn which caused the plane to crash. The right wing hit the ground first, causing the plane to do a partial cartwheel, coming to rest on its nose. Goeke said after he located the crash, he helped Lawson out of the plane and brought him out of the cornfield for the medics.

Inspector Craig arrived on the scene at approximately 1130 a.m. and began his investigation. I introduced Craig to Goeke then we walked back to the crash site. While looking over the plane Goeke told Craig he did not know if the pin had been pulled on the parachute deployment rocket. Craig advised he was not familiar with this model rocket or how to render it safe. Craig stated the plane could not be moved until the rocket had been rendered safe. Craig was not sure if he could get ahold of anyone from the company or not today. Once the deployment rocket had been rendered safe and he completed his scene investigation the plane could be released. I asked Craig if he had any need to hold the plane, he said no. I told Craig we would let Goeke take care of removing the plane from the cornfield. Goeke was familiar with how to remove the plane and he had a place to store it.

At approximately 1 p.m. I cleared the crash scene. I advised Craig I would put all of our pictures and mapping together and get it to him by the end of the week. Craig advised once his investigation was completed he would forward us a copy of his report.
