

NATIONAL TRANSPORTATION SAFETY BOARD

NTSB Form 6120.1

PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

Email the pilot/operator aircraft accident/incident report to the investigator-in-charge of your accident/incident. If email is not available, mail the report per the instructions below.

If your accident/incident occurred in Maine, Vermont, New Hampshire, Massachusetts, Connecticut, Rhode Island, New York, New Jersey, Pennsylvania, Maryland, Delaware, Virginia, West Virginia, Kentucky, Tennessee, North Carolina, South Carolina, Mississippi, Alabama, Georgia, Florida, the District of Columbia, Puerto Rico, or the US Virgin Islands, send the form to: NTSB, ERA, 45065 Riverside Parkway, Ashburn, VA 20147.

If your accident/incident occurred in Ohio, Michigan, Indiana, Wisconsin, Illinois, Minnesota, Iowa, Missouri, Arkansas, Louisiana, North Dakota, South Dakota, Nebraska, Kansas, Oklahoma, Texas, Colorado, or New Mexico, send the form to: NTSB, CEN, 4760 Oakland Street, Suite 500, Denver, CO 80239.

If your accident/incident occurred in Montana, Wyoming, Idaho, Utah, Arizona, Nevada, Washington, Oregon, California, Hawaii, or the territories of Guam or American Samoa, send the form to: NTSB, WPR, 505 South 336th Street, Suite 540, Federal Way, WA 98003.

If your accident/incident occurred in Alaska, send the form to: NTSB, ANC, 222 West 7th Avenue, Room 216, Box 11, Anchorage, AK 99513.

Rules pertaining to notification of aircraft accidents and incidents, as well as overdue aircraft are found in 49 Code of Federal Regulations (CFR) Part 830 http://www.ecfr.gov/cgi-bin/text-idx?c=ecfr&tpl=/ecfrbrowse/Title49/49cfr830_main_02.tpl. These rules state the authority of the NTSB, define accidents, incidents, injuries, and other terms, and provide procedures for initial and immediate notification of accidents and incidents by aircraft pilots/operators.

A. APPLICABILITY

The pilot/operator of an aircraft shall send a report to the office listed above, based on accident/incident location; immediate notification is required by 49 CFR 830.5(a). **The report shall be filed within 10 days after an accident for which notification is required by Section 830.5, or after 7 days if an overdue aircraft is still missing.**

An aircraft accident, as defined in 49 CFR 830.2, is determined as an occurrence that involves a fatality or serious injury, or substantial damage to the aircraft. For occurrences that do not involve a fatality, the determination that the occurrence is an accident can be appealed by writing to the Director, Office of Aviation Safety, NTSB, 490 L'Enfant Plaza, S.W., Washington, D.C. 20594.

INSTRUCTIONS TO PILOTS/OPERATORS FOR COMPLETING THIS FORM

It is necessary that ALL questions on this report be answered completely and accurately.

If more space is needed, continue on a blank sheet of paper.

Nearest City/Place: Use the name of the nearest community in the state where the accident/incident occurred.

Date/Time: Indicate the date and local time of the event. Be sure to indicate the time zone.

Phase of Operation: Indicate the phase of operation during which the accident/incident occurred.

Aircraft Information: Enter aircraft make and model information as indicated on the aircraft registration certificate, including series. If the involved aircraft is certified as "amateur-built," include the name of the producer of the kit or plans, unless an NTSB employee instructs otherwise.

Maximum Gross Weight: Enter the certificated maximum gross weight for the aircraft involved in the occurrence. This should be the same as the maximum gross weight indicated on the aircraft weight and balance documents.

Engine: Enter engine make and model information as indicated on the engine data plate.

The NTSB uses this form for aircraft accident prevention activities and for statistical purposes. NTSB regulations (49 CFR Part 830) require that **ALL** questions be answered completely and accurately. Completion of this form will take approximately 60 minutes. The NTSB does not guarantee the privacy of any information provided in this form. You need not complete this form unless it displays a valid OMB control number, in accordance with 5 C.F.R. § 1320.5(b), which applies to this collection of information.

B. DEFINITIONS

1. "Aircraft Accident" means an occurrence associated with the operation of an aircraft that takes place between the time any person boards the aircraft with the intention of flight and all such persons have disembarked, and in which any person suffers death, or serious injury, or in which the aircraft receives substantial damage. For purposes of this form, the definition of "aircraft accident" includes "unmanned aircraft accident," as defined at 49 CFR 830.2.

2. "Substantial Damage" means damage or failure that adversely affects the structural strength, performance or flight characteristics of the aircraft, and that would normally require major repair or replacement of the affected component. NOTE: Engine failure or damage limited to an engine if only one engine fails or is damaged, bent fairing or cowling, dented skin, small puncture holes in the skin or fabric, ground damage to rotor or propeller blades, and damage to landing gear, wheels, tires, flaps, engine accessories, brakes, or wing tips are not considered "substantial damage" for purposes of this report.

3. "Operator" means any person who causes or authorizes the operation of an aircraft, such as the owner, lessee, or bailee of an aircraft.

4. "Fatal Injury" means any injury that results in death within thirty (30) days of the accident.

5. "Serious Injury" means any injury that (1) requires hospitalization for more than 48 hours, commencing within 7 days from the date the injury was received; (2) results in a fracture of any bone (except simple fracture of fingers, toes, or nose); (3) causes severe hemorrhages, nerve, muscle, or tendon damage; (4) involves injury to any internal organ; or (5) involves second- or third-degree burns, or any burns affecting more than 5 percent of the body surface.

Type of Fire Extinguishing System: If a fire extinguishing system was used to fight an aircraft fire, specify the type(s) of extinguishing system(s) used. Examples include handheld extinguisher, engine fire bottle, cargo/baggage compartment fire suppression system, or airport emergency ground equipment.

Owner/Operator Information: Enter the owner information as shown on the registration certificate. Commercial operators, enter the operator information, including "doing business as" when applicable, as shown on the operator certificate.

Revenue Sightseeing Flight: Indicate whether the accident aircraft was conducting revenue sightseeing operations under 14 CFR Part 91 at the time of the accident.

Air Medical Flight: Indicate whether the accident flight was being conducted for the purpose of carrying medical personnel, patient(s), or organs.

Public Aircraft: Federal, state or local government flight operations such as official travel, law-enforcement, low-level observation, aerial application, firefighting, search and rescue, biological or geological resource management, or aeronautical research. Indicate whether the flight was conducted by the armed forces, federal, state, or local government.

Purpose of Flight: 14 CFR Parts 91, 103, 133, 136, and 137: Indicate the type of operation that was being conducted at the time of the occurrence using the following definitions:

AERIAL APPLICATION--Operations using an aircraft to perform aerial application or dispersion of any substance. Examples include agricultural, health, forestry, cloud seeding, firefighting, insect control, etc.

AERIAL OBSERVATION--These flights include aerial mapping/photography, patrol, search and rescue, hunting, highway traffic advisory, ranching, surveillance, oil and mineral exploration, criminal pursuit, fish spotting, etc.

AIR DROP--Aerial operations, other than aerial application, that are intended to release items in flight.

AIR RACE/SHOW--Includes any flight operations conducted as part of an organized air race or public demonstration.

BUSINESS--includes all personal flying without a paid professional crew for reasons associated with furthering a business, including transportation to and from business meetings or work. This does not include corporate/executive operations, air taxi, or commuter operations.

EXECUTIVE/CORPORATE--Company flying with a paid, professional crew.

FERRY--Non-revenue flight under a special flight or "ferry" permit. Refer to 14 CFR 21.197 for details of special flight permit issuance.

FLIGHT TEST--Flight for the purpose of investigating the flight characteristics of an aircraft/aircraft component or evaluating an applicant for a pilot certificate or rating.

INSTRUCTIONAL--Flying while under the supervision of a flight instructor or receiving air carrier training. Personal proficiency flight operations and personal flight reviews, as required by federal air regulations, are excluded.

OTHER WORK USE--Miscellaneous flight operations conducted for compensation or hire such as construction work (not 14 CFR Part 135 operation), parachuting, aerial advertising, towing gliders, etc.

PERSONAL--Flying for personal reasons (excludes business transportation) including pleasure or personal transportation. This also includes practice or proficiency flights performed under flight instructor supervision and not part of an approved flight training program.

POSITIONING--Non-revenue flight conducted for the primary purpose of relocating the aircraft. Examples include moving the aircraft to a maintenance facility or to load passengers or cargo etc.

UNKNOWN--Use only if the primary purpose of flight is not known.

Other Aircraft--Collision: For all accidents involving a collision with another aircraft, including parked aircraft, check "Collision with other aircraft" under Basic Information and complete this section indicating details about the OTHER aircraft involved in the collision.

Airport Information: Complete this section if the accident/incident occurred on approach, landing, takeoff, departure, or within 3 statute miles of an airport. Please refer to the FAA Airport/Facility Directory or other official source for airport information.

Airport Identifier: Provide the official 3 or 4 character airport identifier number.

Runway: Indicate the number of the runway used, including L, R, or C if applicable.

Runway/Landing Surface: Indicate the type of intended runway/landing surface (do not indicate surface conditions). If the surface type was mixed, check all that apply.

Condition of Runway/Landing Surface: Indicate the condition of the intended runway/landing surface. If multiple conditions existed at the time of the accident, check all that apply.

Weather Information at the Accident/Incident Site: Indicate the weather conditions reported at the accident/incident site at the time of occurrence. If no weather reporting was available for the accident/incident site, indicate the reported conditions at the nearest reporting site. Specify the weather reporting site identifier, the observation time, and distance from the accident/incident.

Sky/Lowest Cloud Condition: Indicate the height above ground level of the lowest cloud condition present at the time of the accident/incident and whether coverage was reported as few, scattered, broken or overcast. Also indicate the height above ground level and coverage of the lowest cloud ceiling present at the time of the accident/incident (reported as broken or overcast).

NOTAMs (D and FDC), AIRMETs, SIGMETs, PIREPs: Describe all NOTAMs (distant (D) or Flight Data Center (FDC), if known), AIRMETs, SIGMETs, and PIREPs in effect near the accident/incident.

Flight Crewmember Information: Indicate the category that best describes the capacity served by this flight crewmember at the time of the accident. The designators "Flight Crewmember 1" and "Flight Crewmember 2" do not refer to a specific pilot position or responsibility. If more than one pilot is aboard, they may be entered in any order and their capacity entered as appropriate.

Degree of Injury: See Definitions on the top half of Page 1 of the instructions. Minor injury is not defined. If an injury does not meet the criteria for another injury category, select Minor.

Date of Last Flight Review or Equivalent: Enter the date of the most recent flight review, or equivalent, completed by this pilot. Refer to 14 CFR 61.56 for accepted equivalents.

Type Ratings: List all type ratings on the pilot certificate. If the pilot holds no type ratings indicate "none." If the pilot holds a pilot certificate other than student and was flying an aircraft requiring an endorsement, enter the type and date of any logbook endorsement(s) for that aircraft. See 14 CFR 61 for examples of required endorsements.

Student Endorsements: If the pilot holds a student pilot certificate, enter all solo endorsements and dates on the student pilot certificate.

Flight Time: Complete the flight time matrix. Solo flight time should be included as "Pilot-in-Command (PIC)" and all dual flight instruction given should be included as "Time as Instructor."

Additional Flight Crewmembers: Complete this section if there were more than two required flight crewmembers on the aircraft. This also includes a check airman performing official duties but does not include cabin crew. State the capacity served by each included crewmember at the time of the accident.

Passenger(s)/Other Personnel: Enter identification and injury severity information for all passengers, cabin crew, and other personnel involved in the accident. See Page 1 of the instructions for the official definition of injury levels.

Several questions throughout the form allow for multiple responses; when appropriate, choose all responses that apply.

These instructions only pertain to major issue areas covered by NTSB Form 6120.1 Pilot/Operator Aircraft Accident/Incident Report. For additional definitions of questions and responses, please refer to www.nts.gov.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Monday, November 7th, Wasim Gul, the pilot with whom I was scheduled to fly with, sent me the flight plan at 2:39 am. The flight plan was from KINF to Tuscaloosa. I arrived at the airport around 5:15 am and Wasim was refueling the plane at that time. The tank was full and we had 26.1 gallons of usable fuel. The weather and wind conditions were VFR, and so we took that opportunity of clear weather and wind to take off towards the direction of northwest, around 5:45 am. We climbed to 4500 feet and then ascended to 5300 feet to avoid clouds. We headed towards our destination of Tuscaloosa, with Wasim being PIC and handling the radio. It took us around 3.4 hours to reach there. Before landing in Tuscaloosa, we noticed that there was an issue with the fuel pressure gauge. The gauge was inconsistent and showing intermittently high/low. Once we arrived, we started to discuss the fuel pressure gauge. I continued to monitor them and I searched online about responding to any issues with the fuel pressure gauge. After monitoring them for a while, I let Wasim know that the fuel pressure gauges were now consistent in the green. I also gained clarification from Flight Scheduler Pro that there was a squawk written about the fuel pressure in-ops and according to the MEL if we put a note showing the fuel pressure gauges as inoperative in the cockpit, then we can take off. I also showed him the fuel gauge, letting him know the quantity of fuel we had remaining. The bubble was at the top in the green area. Since we flew 3.4 hours at 3.6 gallons per hour, we had 13.86 gallons remaining. Also, considering the time the plane was idle on the ground, it burned approximately 5 gallons of fuel at idle rpms approx 1800-2000, leaving us with 7.86 gallons. We took off from KTCL with Wasim as PIC and the one giving out the radio calls. Which I am sure can be proven with the recording from the ATC. From there we headed towards 08A, the city of Wetumpka, and reached there in about 50 minutes. During this, we consumed about 4 gallons of fuel per hour due to the headwinds, instead of the initial 3.6 gallons per hour we consumed on our way to KTCL. By the time we reached 08A, we had approximately 3.86 gallons remaining. Wasim decided to refuel 5 more gallons from 08A resulting in 8.86 gallons of fuel in our plane. I was reluctant about the amount of fuel and felt we needed more but he refused and said that because he is a CFI, his calculations are more accurate and he holds more authority in the decision-making. Wasim felt that we had enough fuel to reach Inverness. I insisted that we did not have enough fuel to reach Inverness. He told me that the fuel gauges were inaccurate anyways and that I should not consider them when calculating how much fuel we had remaining. He had also done the calculations, and felt that they were more accurate as compared to mine, due to him being a CFI. He felt that we were okay to fly with the amount of fuel we had. I was still hesitant and continued to protest against flying to Inverness. And so he agreed to stop at another airport if we required more fuel. He was saying that he did not want to fill more fuel now because he felt that Garrett, the company's representative, would not refund him for the amount he spends on refueling, so he only spent what he felt was necessary. I continued to insist and did not have a means of my own to pay for the fuel or I would have. He continued to convince me that we can stop at another airport on the way. So, eventually, I agreed and told him that I will head towards 2J9, Quincy Municipal airport, and he would refuel more there because I knew that we had more than enough fuel to fly to 2J9.

I was the PIC when we took off from 08A and headed towards 2J9. It took about 1.3 hours to reach there and due to the headwinds, we consumed 4 gallons of fuel per hour, leaving us with 3.86 gallons of fuel. Wasim pointed out to me that even according to the fuel gauge we still had enough fuel so, at 2J9, he said he will refuel only 4 more gallons because that was more than enough to reach Inverness. Again, I disagreed and begged him to put in more because the plane would not reach Inverness and I suggested that instead of Inverness we go to Cross City, since he continuously refused to refuel more. The distance from 2J9 to Cross City was 95 miles and about 1 hour of flight time. Before taking off we checked the weather conditions at 2J9 headed towards Cross City and they were VFR.

We left 2J9 with me as PIC and we had about 7.66 gallons of fuel which would have allowed us to fly for about 1.75 hours and we had 30 minutes of reserve fuel. 45 miles before approaching Cross City the headwinds became stronger and fuel consumption increased. I continued to monitor the fuel gauges. 30 minutes prior it showed about 6 more gallons of fuel, but then 10-15 minutes later it showed we no longer had enough fuel. The right tank had only about 2 gallons of fuel left and so we switched to the left tank which had about 2-3 gallons of fuel left. We intermittently switched between both tanks until both tanks no longer had fuel. 10-15 min before we made an emergency landing, we lost the engine and I attempted to restart it. The engine restarted for about 1 minute before it failed to restart again. At that time, we were at 2500 ft and about 5 to 6 miles away from the airport's runway 13. Once the engine failed we quickly came down from 2500 ft to 600 ft AGL and we were gliding at the best glide speed. But due to the strong headwinds and the aircraft being a light aircraft, we were unable to glide the aircraft towards the runway.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I should have acted upon my hesitation and clarified with someone at Mesa about any concerns that I may have had concerning fuel consumption. I also should have contacted maintenance for any issues that I felt the plane may have been having. It is also necessary to prepare for any unforeseen weather and circumstances. Regardless of whether there is enough fuel to reach a certain airport, we should still account for all situations that may require the plane to fly for a longer time. Winds were suitable before flying, but they became stronger causing the fuel to burn a lot quicker closer to our destination, including our 30 minutes of reserve fuel. This rendered the calculation of fuel consumption to be inaccurate. In order to have prevented this incident, a proper flight plan should have been created, as per the company and FAA rules. Also, the calculation of fuel should have accounted for any unforeseen weather conditions and situations. The fuel should have been filled up at the first destination, instead of just enough gallons being filled to go destination by destination.

Because even though according to the calculations there was enough fuel in the plane to reach our destination, the winds became unpredictable and could likely have been the cause for excessive fuel being consumed resulting in engine failure. The company should also provide fuel cards, especially if they planned on reimbursing the pilots for any out of pocket fuel expenses. If I had a card on me at that time, I would have most definitely filled it up and the pilot that refused to refuel due to fear of not being reimbursed, would also have filled the fuel up. Proper routes should be provided by the company, which were not. I have learned from my mistakes and know that moving forward this accident will allow me to become a much better and safer pilot

CONTINUED NARRATIVE HISTORY OF FLIGHT....

Wasim suddenly took the controls from me, saying because he was a CFI he felt more qualified to handle the situation, even though I felt perfectly capable of doing so myself. Still, I announced to him that you have the controls and he acknowledged by saying, "I have the controls." Wasim continued heading toward the the airport which was only about 3 miles away. I told him we will not make it due to the headwinds being so strong, causing the plane to quickly lose altitude. Instead, we should find a clearing to safely land the plane. Because he was the PIC at that time I looked around for a place to land. To my left, there was an empty road and I guided him towards it because if he continued heading where he was, there were trees and houses which would have made it a lot more unsafe. I told him that I am deploying the parachute and right as I said that Wasim went ahead and deployed the parachute. Once the parachute was deployed the plane slowed down which resulted in no injuries to both of the pilots. Thankfully since we landed in a clearing and did proper planning before the impact, there was also no damage to anyone or any property. Visually, we could see that the front landing gear and propeller of the plane were damaged. Once the plane was on the ground, I exited the plane because of the possibility of the plane catching fire, while Wasim continued to gather his things before exiting as well. I was inspecting myself for any injuries as the police showed up and questioned us about what happened.

Legs	Departure	Destination	Distance	Time flown	Altitude	Total fuel	Fuel consumed	Fuel remaining	refuel
1	KINF	KTCL	380 Nm	3.4 TT	4500 ft	26.1 gal	12.24 gal	13.86 gal	
2	KTCL	08A	77 Nm	50 min	3000 ft/5000ft	7.86G	4 gal	3.86 gal	+5 gal
3	08A	2J9	147 Nm	1.3	3000ft	8.86 gal	5.2 gal	3.66 gal	+4 gal
4	2J9	KCTY	95 Nm	1.0					

calculated but due to headwind 1.5 flown 3000 ft 7.66 gal

According to the pilot operating handbook for this aircraft, the fuel consumption was calculated as 3.5 gallons per hour going from KINF to KTCL. less power more tailwinds more groundspeed at 4600 RPMs. From KTCL-08A-29J-KCTY the fuel consumption was calculated at 4 gallons per hour at 4800-4900 RPMs because of 10 knots of headwind. I have attached a reference to the table provided in the POH on the page below.

I HEREBY CERTIFY THAT THE ABOVE INFORMATION IS COMPLETE AND ACCURATE TO THE BEST OF MY KNOWLEDGE
