

NATIONAL TRANSPORTATION SAFETY BOARD

NTSB Form 6120.1

PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

Email the pilot/operator aircraft accident/incident report to the investigator-in-charge of your accident/incident. If email is not available, mail the report per the instructions below.

If your accident/incident occurred in Maine, Vermont, New Hampshire, Massachusetts, Connecticut, Rhode Island, New York, New Jersey, Pennsylvania, Maryland, Delaware, Virginia, West Virginia, Kentucky, Tennessee, North Carolina, South Carolina, Mississippi, Alabama, Georgia, Florida, the District of Columbia, Puerto Rico, or the US Virgin Islands, send the form to: NTSB, ERA, 45065 Riverside Parkway, Ashburn, VA 20147.

If your accident/incident occurred in Ohio, Michigan, Indiana, Wisconsin, Illinois, Minnesota, Iowa, Missouri, Arkansas, Louisiana, North Dakota, South Dakota, Nebraska, Kansas, Oklahoma, Texas, Colorado, or New Mexico, send the form to: NTSB, CEN, 4760 Oakland Street, Suite 500, Denver, CO 80239.

If your accident/incident occurred in Montana, Wyoming, Idaho, Utah, Arizona, Nevada, Washington, Oregon, California, Hawaii, or the territories of Guam or American Samoa, send the form to: NTSB, WPR, 505 South 336th Street, Suite 540, Federal Way, WA 98003.

If your accident/incident occurred in Alaska, send the form to: NTSB, ANC, 222 West 7th Avenue, Room 216, Box 11, Anchorage, AK 99513.

Rules pertaining to notification of aircraft accidents and incidents, as well as overdue aircraft are found in 49 Code of Federal Regulations (CFR) Part 830 http://www.ecfr.gov/cgi-bin/text-idx?c=ecfr&tpl=/ecfrbrowse/Title49/49cfr830_main_02.tpl. These rules state the authority of the NTSB, define accidents, incidents, injuries, and other terms, and provide procedures for initial and immediate notification of accidents and incidents by aircraft pilots/operators.

A. APPLICABILITY

The pilot/operator of an aircraft shall send a report to the office listed above, based on accident/incident location; immediate notification is required by 49 CFR 830.5(a). **The report shall be filed within 10 days after an accident for which notification is required by Section 830.5, or after 7 days if an overdue aircraft is still missing.**

An aircraft accident, as defined in 49 CFR 830.2, is determined as an occurrence that involves a fatality or serious injury, or substantial damage to the aircraft. For occurrences that do not involve a fatality, the determination that the occurrence is an accident can be appealed by writing to the Director, Office of Aviation Safety, NTSB, 490 L'Enfant Plaza, S.W., Washington, D.C. 20594.

INSTRUCTIONS TO PILOTS/OPERATORS FOR COMPLETING THIS FORM

It is necessary that ALL questions on this report be answered completely and accurately.

If more space is needed, continue on a blank sheet of paper.

Nearest City/Place: Use the name of the nearest community in the state where the accident/incident occurred.

Date/Time: Indicate the date and local time of the event. Be sure to indicate the time zone.

Phase of Operation: Indicate the phase of operation during which the accident/incident occurred.

Aircraft Information: Enter aircraft make and model information as indicated on the aircraft registration certificate, including series. If the involved aircraft is certified as "amateur-built," include the name of the producer of the kit or plans, unless an NTSB employee instructs otherwise.

Maximum Gross Weight: Enter the certificated maximum gross weight for the aircraft involved in the occurrence. This should be the same as the maximum gross weight indicated on the aircraft weight and balance documents.

Engine: Enter engine make and model information as indicated on the engine data plate.

The NTSB uses this form for aircraft accident prevention activities and for statistical purposes. NTSB regulations (49 CFR Part 830) require that **ALL** questions be answered completely and accurately. Completion of this form will take approximately 60 minutes. The NTSB does not guarantee the privacy of any information provided in this form. You need not complete this form unless it displays a valid OMB control number, in accordance with 5 C.F.R. § 1320.5(b), which applies to this collection of information.

B. DEFINITIONS

1. "Aircraft Accident" means an occurrence associated with the operation of an aircraft that takes place between the time any person boards the aircraft with the intention of flight and all such persons have disembarked, and in which any person suffers death, or serious injury, or in which the aircraft receives substantial damage. For purposes of this form, the definition of "aircraft accident" includes "unmanned aircraft accident," as defined at 49 CFR 830.2.

2. "Substantial Damage" means damage or failure that adversely affects the structural strength, performance or flight characteristics of the aircraft, and that would normally require major repair or replacement of the affected component. NOTE: Engine failure or damage limited to an engine if only one engine fails or is damaged, bent fairing or cowling, dented skin, small puncture holes in the skin or fabric, ground damage to rotor or propeller blades, and damage to landing gear, wheels, tires, flaps, engine accessories, brakes, or wing tips are not considered "substantial damage" for purposes of this report.

3. "Operator" means any person who causes or authorizes the operation of an aircraft, such as the owner, lessee, or bailee of an aircraft.

4. "Fatal Injury" means any injury that results in death within thirty (30) days of the accident.

5. "Serious Injury" means any injury that (1) requires hospitalization for more than 48 hours, commencing within 7 days from the date the injury was received; (2) results in a fracture of any bone (except simple fracture of fingers, toes, or nose); (3) causes severe hemorrhages, nerve, muscle, or tendon damage; (4) involves injury to any internal organ; or (5) involves second- or third-degree burns, or any burns affecting more than 5 percent of the body surface.

Type of Fire Extinguishing System: If a fire extinguishing system was used to fight an aircraft fire, specify the type(s) of extinguishing system(s) used. Examples include handheld extinguisher, engine fire bottle, cargo/baggage compartment fire suppression system, or airport emergency ground equipment.

Owner/Operator Information: Enter the owner information as shown on the registration certificate. Commercial operators, enter the operator information, including "doing business as" when applicable, as shown on the operator certificate.

Revenue Sightseeing Flight: Indicate whether the accident aircraft was conducting revenue sightseeing operations under 14 CFR Part 91 at the time of the accident.

Air Medical Flight: Indicate whether the accident flight was being conducted for the purpose of carrying medical personnel, patient(s), or organs.

Public Aircraft: Federal, state or local government flight operations such as official travel, law-enforcement, low-level observation, aerial application, firefighting, search and rescue, biological or geological resource management, or aeronautical research. Indicate whether the flight was conducted by the armed forces, federal, state, or local government.

Purpose of Flight: 14 CFR Parts 91, 103, 133, 136, and 137: Indicate the type of operation that was being conducted at the time of the occurrence using the following definitions:

AERIAL APPLICATION--Operations using an aircraft to perform aerial application or dispersion of any substance. Examples include agricultural, health, forestry, cloud seeding, firefighting, insect control, etc.

AERIAL OBSERVATION--These flights include aerial mapping/photography, patrol, search and rescue, hunting, highway traffic advisory, ranching, surveillance, oil and mineral exploration, criminal pursuit, fish spotting, etc.

AIR DROP--Aerial operations, other than aerial application, that are intended to release items in flight.

AIR RACE/SHOW--Includes any flight operations conducted as part of an organized air race or public demonstration.

BUSINESS--includes all personal flying without a paid professional crew for reasons associated with furthering a business, including transportation to and from business meetings or work. This does not include corporate/executive operations, air taxi, or commuter operations.

EXECUTIVE/CORPORATE--Company flying with a paid, professional crew.

FERRY--Non-revenue flight under a special flight or "ferry" permit. Refer to 14 CFR 21.197 for details of special flight permit issuance.

FLIGHT TEST--Flight for the purpose of investigating the flight characteristics of an aircraft/aircraft component or evaluating an applicant for a pilot certificate or rating.

INSTRUCTIONAL--Flying while under the supervision of a flight instructor or receiving air carrier training. Personal proficiency flight operations and personal flight reviews, as required by federal air regulations, are excluded.

OTHER WORK USE--Miscellaneous flight operations conducted for compensation or hire such as construction work (not 14 CFR Part 135 operation), parachuting, aerial advertising, towing gliders, etc.

PERSONAL--Flying for personal reasons (excludes business transportation) including pleasure or personal transportation. This also includes practice or proficiency flights performed under flight instructor supervision and not part of an approved flight training program.

POSITIONING--Non-revenue flight conducted for the primary purpose of relocating the aircraft. Examples include moving the aircraft to a maintenance facility or to load passengers or cargo etc.

UNKNOWN--Use only if the primary purpose of flight is not known.

Other Aircraft--Collision: For all accidents involving a collision with another aircraft, including parked aircraft, check "Collision with other aircraft" under Basic Information and complete this section indicating details about the OTHER aircraft involved in the collision.

Airport Information: Complete this section if the accident/incident occurred on approach, landing, takeoff, departure, or within 3 statute miles of an airport. Please refer to the FAA Airport/Facility Directory or other official source for airport information.

Airport Identifier: Provide the official 3 or 4 character airport identifier number.

Runway: Indicate the number of the runway used, including L, R, or C if applicable.

Runway/Landing Surface: Indicate the type of intended runway/landing surface (do not indicate surface conditions). If the surface type was mixed, check all that apply.

Condition of Runway/Landing Surface: Indicate the condition of the intended runway/landing surface. If multiple conditions existed at the time of the accident, check all that apply.

Weather Information at the Accident/Incident Site: Indicate the weather conditions reported at the accident/incident site at the time of occurrence. If no weather reporting was available for the accident/incident site, indicate the reported conditions at the nearest reporting site. Specify the weather reporting site identifier, the observation time, and distance from the accident/incident.

Sky/Lowest Cloud Condition: Indicate the height above ground level of the lowest cloud condition present at the time of the accident/incident and whether coverage was reported as few, scattered, broken or overcast. Also indicate the height above ground level and coverage of the lowest cloud ceiling present at the time of the accident/incident (reported as broken or overcast).

NOTAMs (D and FDC), AIRMETs, SIGMETs, PIREPs: Describe all NOTAMs (distant (D) or Flight Data Center (FDC), if known), AIRMETs, SIGMETs, and PIREPs in effect near the accident/incident.

Flight Crewmember Information: Indicate the category that best describes the capacity served by this flight crewmember at the time of the accident. The designators "Flight Crewmember 1" and "Flight Crewmember 2" do not refer to a specific pilot position or responsibility. If more than one pilot is aboard, they may be entered in any order and their capacity entered as appropriate.

Degree of Injury: See Definitions on the top half of Page 1 of the instructions. Minor injury is not defined. If an injury does not meet the criteria for another injury category, select Minor.

Date of Last Flight Review or Equivalent: Enter the date of the most recent flight review, or equivalent, completed by this pilot. Refer to 14 CFR 61.56 for accepted equivalents.

Type Ratings: List all type ratings on the pilot certificate. If the pilot holds no type ratings indicate "none." If the pilot holds a pilot certificate other than student and was flying an aircraft requiring an endorsement, enter the type and date of any logbook endorsement(s) for that aircraft. See 14 CFR 61 for examples of required endorsements.

Student Endorsements: If the pilot holds a student pilot certificate, enter all solo endorsements and dates on the student pilot certificate.

Flight Time: Complete the flight time matrix. Solo flight time should be included as "Pilot-in-Command (PIC)" and all dual flight instruction given should be included as "Time as Instructor."

Additional Flight Crewmembers: Complete this section if there were more than two required flight crewmembers on the aircraft. This also includes a check airman performing official duties but does not include cabin crew. State the capacity served by each included crewmember at the time of the accident.

Passenger(s)/Other Personnel: Enter identification and injury severity information for all passengers, cabin crew, and other personnel involved in the accident. See Page 1 of the instructions for the official definition of injury levels.

Several questions throughout the form allow for multiple responses; when appropriate, choose all responses that apply.

These instructions only pertain to major issue areas covered by NTSB Form 6120.1 Pilot/Operator Aircraft Accident/Incident Report. For additional definitions of questions and responses, please refer to www.nts.gov.

- right wing separated
- fuselage split into two
- trees damaged

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Flight was to be from Miami Executive Airport (KTMB) to Macon, Georgia (KMCN).

Filed Instrument Flight Rules (IFR) flight plan due to the unfamiliar airspace and environment along with the forecasted weather being a combination of marginal visual meteorological conditions (MVMC) and instrument meteorological conditions (IMC) at and around the Estimated Time of Arrival (ETA) of 2030 EST.

Foreflight was used to file a flight plan and get a weather briefing. Weather briefing was first obtained the night before the flight, then on the morning of the flight and then again after arriving at the school.

Weight and balance computed prior to leaving for the school – take off weight, rounded off to the next hundred was 3400 lbs and landing weight was 3200 lbs. Single engine service ceiling was estimated to be 6000 feet and absolute ceiling of 7500 with a climb rate of 180 feet per minute.

Upon arriving at the flight school at 1500 EST got the “can” which contained the pilot’s operating handbook (POH), weight and balance information, sheet showing the latest VOR checks and the current maintenance and hobbys time.

Reviewed the maintenance records in a big blue folder.

Previously flew this aircraft on November 18, 2022 on a checkout flight.

Had an issue with comm 2 and the accompanying flight instructor completed a yellow sheet to record the issue.

There was no sheet to show that this issue had been addressed. A previous conversation with the school administrator indicated that paper records were maintained only for those repairs that required new parts.

There was nothing amiss on the preflight.

Full fuel tanks with an estimated range of 600 nautical miles with an endurance of 4hrs 30 minutes plus a 45 minute reserve. Estimated flight time was 3hrs 15 minutes

A little bit of fuel leaking from the left fuel vent due to the tank being filled to the brim.

Put 1 quart of oil in the left engine and carried 2 quarts as spare.

Sitting on the right seat. Flight bag strapped to the left seat. Smooth startup.

Obtained then current ATIS X-ray on comm 2.

When speaking with ground control on comm 2 for IFR clearance ground was unable to read. Switched to comm 1 and kept comm 2 only for receiving and monitoring.

Had an expected ground speed of 135 knots to 145 knots but in actuality the ground speed was about 120 knots. Expected a flight time increase by another 25 minutes. Was not unduly concerned as was of the opinion that there was at least an hour and a half fuel reserve. Took off approximately 1655 EST.

IFR clearance was to MCN airport via radar vectors for the Miami 9 departure, Doral transition, DHP, then as filed. Initial altitude 2000 ft and expected altitude of 8000 after ten minutes.

Upon departure began getting vectors and when slightly Northwest of the Miami class B airspace began to get vectors to the Northeast away from the filed flight plan.

Had multiple controller hand offs with a couple unsure of my destination. Was given different headings and a clearance to a fix which was neither on my flight plan or my clearance.

When asking for clarification of the fix a busy controller sent me on a 040 heading. It would appear that I was being taken to DORRL without actually being on the charted DORRL transition.

It was my understanding that since DHP was on my clearance, I would be joining my filed route at DHP and I was being vectored to DHP. Continued for a bit and then enquired why I was on that heading. The controller asked me for my destination and after a brief pause the Palm Beach controller begins vectoring aircraft back towards the filed route.

It was challenging to get ATC to spell names of fixes that were not on my flight plan or use charted aid identifiers instead of names (eg. St. Pete instead of PIE).

In the end a rough calculation showed the vectors resulted in a 40 nautical mile deviation.

Was kept at 2000 feet for roughly 45 minutes before being cleared to 7000 feet first and then to 8000 feet.

Personal minimum to stop for fuel if not at destination by 4 hours into the flight.

Cruise power was at 23" and 2300 RPM and mixture was leaned

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

- despite using the guidance from the performance sections of the POH, a more conservative approach to fuel planning and baselining may have prevented this accident.
- ensuring the need for fuel gauges that are accurate in their reflection of the actual fuel quantity between full tanks and empty, would make the fuel gauge the primary source of information on available fuel quantity than the greater reliance that is placed on performance numbers from the POH.
- a forward looking recommendation would be for ATC to provide immediate vectors to the nearest airport when declaring emergency instead of an 'airport at your 11 'o' clock' reference - in IMC with an uncommanded yaw situation the clock reference is obsolete by the time it is received by the pilot.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

ADDITIONAL INFORMATION (Please type or print in ink)

Use this space if additional space is needed for any answers.

contd. from Pg 9 Narrative History of Flight

Enroute advised by ATC that comm 2 was 2 by 5

Fuel quantity indicator appeared to be operating and did not show cause for concern

Multiple times while enroute would turn on carburetor heat, open the cowl flaps and check the fuel endurance on the onboard Garmin GPS which was set up with 100 gallons fuel on board and 20 gallons per hour fuel consumption.

About the VNA VOR noticed the flight time was about 4 hours (roughly 45 miles from the destination and about 25 minutes of flight time at current speed, some of which would have been on a low power setting for descent) and entered thick IMC, with about 15 minutes to the initial approach fix (IAF) began to focus more on maintaining the flight path and began to think about diverting for fuel.

ATC cleared to the IAF.

There was some turbulence.

Soon after being cleared to the initial approach fix (BLSKY) and turning towards the IAF there was an uncommanded right yaw.

Emergency declared to ATC.

Maintained pitch, power, and yaw by the time positive control of the aircraft was established still in IMC was on a heading towards the VNA VOR and gradually losing altitude.

Secured right engine by feathering the propeller.

Need to land immediately.

When the left engine began to sputter soon after ATC gave the closest airport 51A.

Attempted to go direct

About 1500 ft mean sea level, without any engine power and unable to get the pilot-controlled lighting (attempted three times) to turn on or sight the airport beacon the decision was made to point the aircraft for the darkest terrain as to avoid ground injuries.

When the Garmin avionics sounded a terrain warning lowered the landing gear to further reduce speed.

From a visit to the site the next morning, it appeared that the aircraft tail separated after hitting a tree, followed by a separation of the right wing, turning the aircraft to the right and flipping over, splitting the fuselage at or upon impacting the terrain.

The approximate time of the accident was 2100 hrs EST.

I HEREBY CERTIFY THAT THE ABOVE INFORMATION IS COMPLETE AND ACCURATE TO THE BEST OF MY KNOWLEDGE
