See attached statement !

01/31/2023

This is my personal recollection of events.

On 01/28/2023, I was supposed to bring an aircraft model Aero Commander 500, tail number N107DF from Tampa Exec (KVDF) to Birmingham Intl (KBHM) for aircraft repositioning since this aircraft had only about 18 hours left before scheduled inspection.

Around 3:20pm EST I started preflighting the aircraft, and noticed the fuel indicator was showing 80gl of fuel. The aircraft's tank can hold a maximum of 156gl and I'd have needed at least 113gl to stay in legality with part 91 IFR fuel requirement.

I went inside Skyport Aviation, a local FBO, and spoke to one of the line service personnel. I asked her to fill up N107DF and she said she checked that airplane that morning and it was full. I replied "that's weird, the indicator is showing only 80gl." I told her I was going to check the fuel Tank.

I returned to the airplane, removed the fuel cap, and I observed fuel on top of the tab and touching the fuel cap. I visualized gas in the tank.

After I was finishing preflight, I checked the maintenance logs and did not see anything related to fuel system malfunctions. I started the engines and noticed the fuel indicator was flickering in a range between 40gl - 100gl. I remember thinking "that's just another faulty indicator."

During the flight I had no issues other than the flickering fuel indicator.

Between 15 - 20 min of arrival, south of Birmingham, I experienced a partial loss of power on the right engine followed by total loss of power. I advanced my mixtures, propellers, throttle all the way forward. I told ATC I lost one engine. ATC told me there was an airport 5 to 6 miles south of my position. I turned 180 and saw the airport.

I began my checklist but before I could finish, my left engine had a partial loss of power. The left engine was sputtering.

I told ATC I would not make it to the airport. ATC told me there was an interstate off my left side. I turned to the interstate but observed too many vehicles were on the road. I could not attempt a safe landing.

I saw a farm on my left side and decided that was the only suitable spot I could attempt to land. I tried to feather the left engine and cut the mixture. I was already on final when I put my landing gear and flaps down.

At around 5:40pm CST, I landed on the field but the aircraft had enough energy to roll to the tree line, where it impacted with a tree, ripping the left wing off. Because these airplane models don't

have shoulder harnesses, I hit my head, presumably either on the dashboard or the magnetic compass.

I turned the battery off, unbuckled, got my cellphone, jacket, and attempted to open the door. The door was stuck so I kicked it open. I walked about 200 - 300 feet away from the airplane where I called Jason Schwartz, a coworker, and asked him to let ATC and Central Air Southwest know I crashed but was alive. I then called 911 and waited for first responders to arrive on the scene.

This is the end of my recollection.
