Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

A visual inspection of N565TF indicated a bent propeller, collapsed nose gear, broken left wing tip and landing light with some buckling of sheet metal next to it. The left leading edge of the wing was separated from the fuselage and the trailing edge was impacted into the fuselage. The flaps were at 30 degrees and did not retract with their lever was released

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

On March 19, 2023, I conducted a VFR cross-country flight to build hours toward my instrument rating. One leg of the flight was from Martinsville, VA to Sanford, NC. I used flight following until I was about 15 NM away from my destination. I then listened to the A WOS to obtain weather and altimeter information. I next monitored CTAF and learned other aircraft were using Runway 3. At 10 NM, I announced my position and intentions to land with a full stop.

I arrived at Raleigh Executive Airport (KTTA) at approximately 4:18 pm and entered the pattern from the North West. I turned from base to final and lined up with the runway.

After touching down, the airplane unexpectedly veered to the left. I applied full right rudder to stay on the runway. However, the plane continued toward the left side of the runway. I approached the A2 taxiway and tried to increase the turn to remain on the asphalt, but the aircraft ran off into the grass due to the speed. I continued to brake, but the ground was marshy. The airplane continued across the ground until the propeller and left wing tip impacted the earthen bank.
