

NATIONAL TRANSPORTATION SAFETY BOARD PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

This form to be used for reporting civil and public aircraft accidents and incidents

BASIC INFORMATION

Accident/Incident Location

Nearest City/Place: 2AL1 Collier AirPark State: AL

ZIP: 36535 Country: US

Latitude: 30-25-26.7100N Longitude: 087-46-39.9610W

(Enter in decimal degrees or degrees:minutes:seconds)

Accident/Incident Date/Time

Date: 04/06/2023 Local Time: 12:10

mm/dd/yyyy

Time Zone: CST

Collision with Other Aircraft: ☐ Midair ☐ On-ground ☒ None

AIRCRAFT INFORMATION

Registration Number: N272AM

Manufacturer: Peterson, Mark G.

Model: Peterson A600

Serial Number: 6600

Year of Manufacture: 2012

Amateur-Built: ☒ Yes ☐ No If Yes: ☒ Kit/Plans ☐ Original Design Make: RotorWay A600

☐ IFR-Equipped and Certified

☐ Commercial Space Flight

☐ Unmanned Aircraft

Maximum Gross Weight: 1500 lbs

Weight at Time of Accident/Incident: _____ lbs

Number of Seats: 2 Flight Crew Seats: 1

Cabin Crew Seats: 0 Passenger Seats: 1

Number of Engines: 1

Category of Aircraft

- ☐ Airplane
- ☐ Balloon
- ☐ Blimp/Dirigible
- ☐ Glider
- ☐ Gyroplane
- ☒ Helicopter
- ☐ Powered Lift
- ☐ Rocket
- ☐ Ultralight
- ☐ Unknown

Type of Airworthiness Certificate

(Check all that apply)

Standard

- ☐ Normal
- ☐ Aerobatic
- ☐ Balloon
- ☐ Commuter
- ☐ Transport
- ☐ Utility

Special

- ☐ Restricted
- ☐ Limited
- ☐ Provisional
- ☐ Special Flight
- ☒ Experimental
- ☐ Special Light-Sport
- ☐ Experimental Light-Sport

☐ Certificate of Authorization or Waiver (COA)
☒ None ☐ Unknown

Landing Gear

(Check all that apply)

☐ Retractable

- ☐ Tricycle
- ☐ Amphibian
- ☐ Emergency Float
- ☐ Float

☐ In-Flight ☐ Fire at Unknown Time
☒ On-Ground ☐ Unknown

Aircraft Explosion

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Explosion at Unknown Time
☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

Fire damage was post impact. Due to the 11 gallons of fuel and the fiberglass body panels, the thermo damage melted and destroyed virtually everything. Grass/turf surface was burnt under the aircraft. Restricted to immediate area under aircraft. Aircraft was a total loss.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

04/06/2023

After hovering for about 20 minutes, I hover taxied to the runway 15/33 at 2AL1. Cleared the area and announced my intentions on the CTAF. Flying right traffic for runway 15.

Time of departure was 12:10. Departing into the wind at the south end of runway 15. At approximately 20 to 30 feet AGL, the engine rpm decayed uncommanded and the aircraft had a yaw to the right. A/S was approximately 25-30 MPH. I corrected for the yaw and at that point I was now lined up at heading of 180. I attempted to reduce the A/S with a flare but the aircraft was too low to continue the flare, so I leveled the aircraft and prepared for a run-on landing to the grass/turf area in front of the aircraft.

The surface contact was light and I was now sliding on the grass surface. Then because the unevenness of the surface the front right skid dug into a turf strip and the aircraft rolled to its right side followed by MR blade strike.

For a few moments, I remained in position and contemplated what may of happened, then I heard the ignition of fuel. I extricated myself from the seatbelt restrains (lap & sholder) and exited the pilot door (left side).

The aircraft was now orientated to a heading of approximately 90 degrees. All the aircraft components remained attached except for a single tail rotor blade which separated from its pitch pin and was located approximately 240 degrees at approximately 30 feet.

Fire Rescue arrived on scene approximately within 20 minutes, along with county law enforcement and EMS. Once the fire was nearly out of fuel and fiberglass panels, the FD flooded the area with water. I did not need any medical evaluation or attention. NTSB allowed the aircraft to be relocated later than afternoon.

Cause and effect

Because the engine manufactured by RotorWay/RotorX has been very reliable, I have been going over everything in my head to try and understand what would have caused this loss of power. When this occurred, this was not an engine seize or sudden stoppage. There was no knocking noise or vibration before the power loss. The power just rolled back, with an aircraft yaw to the right, is the best I can describe it.

I was reviewing the events of the accident at the runway on Sunday (04/09/2023) and I now understand what happened.

In the grass directly under my departure path, I found a turbo inlet hose clamp with no thermal damage. This aircraft engine had an exhaust turbo unit. This stainless steel clamp is one that secures the 2 inch discharge hose from the inlet side of the turbo.

During an inspection after transporting the helicopter back from Florida about a week prior to this flight, I personally adjusted this hose clamp to improve the hose position and radius as it was just starting to exceed the bend. I wanted to prevent it from kinking. I am almost certain I tighten the clamp but apparently, I did not. It could be I was distracted or the clamp was it tighten in the wrong position. With all the thermo damage, that will be impossible to determine for sure.

This now makes sense as to how the power went away. The hose disconnected and the engine lost all the turbo boost and was unable to maintain rpm. Could ofs, should ofs, and would ofs. I was so close to the ground, I had no time to assess the manifold pressure and engine rpm to make a recovery input. If the aircraft skid had not dug in causing the blade strike, it would have been a non-event.

This engine was manufactured and assembled by RotorWay International in 2017. It was installed October 2017 with total time to date just under 500 hours.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Check security of the turbo discharge hose on the inlet side of the turbo unit.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)

Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
