Accident report from Keith Charles Poeschl for N3069S Air Tractor 802 on June 20th, 2023.

I started the morning at 8:30 a.m. with pre-flighting the aircraft. No issues or problems were noticed. The job at task was aerial application of granular fertilizer near Indiantown, FL on farms named Hinson and Kendall. The work was performed from 9:00 a.m. to the time of the accident at 2:45p.m. During these previous flights there was nothing abnormal with the performance of the aircraft or power plant. After finishing the latest application I was ferrying back to the landing strip with an empty hopper, two hours of fuel, at 500 feet AGL and a heading of approximately 090 degrees. I recall feeling a very slight or faint surge of the engine that caused me to scan my gauges. At this time I saw the needle of the torque gauge drop quickly and felt the engine power down and the nose of the aircraft drop. I immediately began looking for a place to land. The area of power loss was over a wooded forest with a few clearings. I chose my landing site and turned about 110 degrees left and continued down. Once I knew I had the landing spot made, I added flaps to slow down the aircraft. I also moved the power lever to the aft position shortly before impact. After coming to a stop I turned the fuel valve to off and moved the start control lever to cut-off position to prevent fire during my exit. Upon inspecting from a safe distance I noticed white smoke coming from the left exhaust stack. I was able to communicate my position for rescue through cell phone service.

End of report.

RECOMMENDATION (How could this accident/incident have been prevented?)
