

Sikes Aviation LLC

Mr. Danny,

My name is Caleb Mimbs. I am an apprentice under Jerry, working to get my A&P. I remember the day we removed the actuating bracket for the elevator. We were going to install the auto-pilot for the aircraft but we could not mount the servo with out doing some extensive fiberglass/ composite work for the mount. We decided not to install since Jerry hasn't done much composite work. I removed the actuating arm from servo and removed the actuating arm from the actuating bracket. Then I removed the actuator bracket from the push/ pull tube for elevator and went and got Jerry to over look my work. It was confirmed by both of us that all parts for auto-pilot, including the actuating bracket was removed, and I remember Jerry making documentation about why we couldn't install the servo and the parts we removed since we couldn't do the install. The parts were placed in a box and put in baggage compartment of aircraft.

Thanks!

Caleb Mimbs
