

Ralph E. Hicks
Senior Air Safety Investigator
AS-ERA

Date: 8/25/2023

Subject: ERA23FA342, Local News Station Video Provided by FAA Inspector

FAA Inspector Cornelius (Neil) Baker provided a local news station (WSPA) video from an unknown source that showed the accident airplane in flight shortly after takeoff.

As first viewed, the airplane was seen on departure and the left wing dipped slightly two times, followed by a dip of the right wing. The airplane was then observed developing a sink rate with the nose slightly up. Shortly prior to ground impact, the nose dropped and the left wing dipped again. The airplane collided with the ground in a slight left-wing-low attitude.
