

Johnson County Airport

611 Airport Rd.

Mountain City, TN 37683

On July 7th 2024 Cessna 182 N2198G arrived at Johnson County Airport (6a4) around 11:30 AM in order to perform jump operations for Skydive Mountain City business. At 12:59 PM they started jump operations with NOTAM #6A407/139 applied and continued throughout the afternoon with 2 stops for fuel being 10.2LL gallons on the first service and 17.3LL gallons on the second servicing.

Weather had moved through the area when the pilot asked to be topped off in order to have full tanks for the trip back to Rutherfordton County (KFQD) and was serviced with 31.9LL gallons and at the same time sold the pilot 2 quarts of Phillips 20/50XC motor oil, I do not know if the pilot added both quarts to the engine.

I had a brief conversation about the weather conditions at the destination airport with the pilot and he stated that he thought that it was clearing as it did here at Johnson County with a passing storm and that he plans to be on the back side of it. My experience with the pilot over the years led me to believe that he was extremely competent and knowledgeable and just can't understand how he could have made the decision to press the approach with such limited visibility in those conditions.

Sad time for us all....
