ESHAAN MAJUMDAR

Pilot no: [REDACTED] (Private pilot)

After departing from ROBE to XSI, mid flight I could sense that my body is getting spatially disoriented, I also caught myself losing altitude once from 2500 to 1700, ~~and~~ my ^{mind} ~~body~~ was not in the best state I should have probably rested at ROBE and then departed. before crashing into the water I was trying to fly by feel and do what my body thought was correct but when I looked at my instruments I knew I was descending. Fatigue and spatial disorientation got the best of me.
