

NATIONAL TRANSPORTATION SAFETY BOARD

NTSB Form 6120.1

PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

Email the pilot/operator aircraft accident/incident report to the investigator-in-charge of your accident/incident. If email is not available, mail the report per the instructions below.

If your accident/incident occurred in Maine, Vermont, New Hampshire, Massachusetts, Connecticut, Rhode Island, New York, New Jersey, Pennsylvania, Maryland, Delaware, Virginia, West Virginia, Kentucky, Tennessee, North Carolina, South Carolina, Mississippi, Alabama, Georgia, Florida, the District of Columbia, Puerto Rico, or the US Virgin Islands, send the form to: NTSB, ERA, 45065 Riverside Parkway, Ashburn, VA 20147.

If your accident/incident occurred in Ohio, Michigan, Indiana, Wisconsin, Illinois, Minnesota, Iowa, Missouri, Arkansas, Louisiana, North Dakota, South Dakota, Nebraska, Kansas, Oklahoma, Texas, Colorado, or New Mexico, send the form to: NTSB, CEN, 4760 Oakland Street, Suite 500, Denver, CO 80239.

If your accident/incident occurred in Montana, Wyoming, Idaho, Utah, Arizona, Nevada, Washington, Oregon, California, Hawaii, or the territories of Guam or American Samoa, send the form to: NTSB, WPR, 505 South 336th Street, Suite 540, Federal Way, WA 98003.

If your accident/incident occurred in Alaska, send the form to: NTSB, ANC, 222 West 7th Avenue, Room 216, Box 11, Anchorage, AK 99513.

Rules pertaining to notification of aircraft accidents and incidents, as well as overdue aircraft are found in 49 Code of Federal Regulations (CFR) Part 830 http://www.ecfr.gov/cgi-bin/text-idx?c=ecfr&tpl=/ecfrbrowse/Title49/49cfr830_main_02.tpl. These rules state the authority of the NTSB, define accidents, incidents, injuries, and other terms, and provide procedures for initial and immediate notification of accidents and incidents by aircraft pilots/operators.

A. APPLICABILITY

The pilot/operator of an aircraft shall send a report to the office listed above, based on accident/incident location; immediate notification is required by 49 CFR 830.5(a). **The report shall be filed within 10 days after an accident for which notification is required by Section 830.5, or after 7 days if an overdue aircraft is still missing.**

An aircraft accident, as defined in 49 CFR 830.2, is determined as an occurrence that involves a fatality or serious injury, or substantial damage to the aircraft. For occurrences that do not involve a fatality, the determination that the occurrence is an accident can be appealed by writing to the Director, Office of Aviation Safety, NTSB, 490 L'Enfant Plaza, S.W., Washington, D.C. 20594.

INSTRUCTIONS TO PILOTS/OPERATORS FOR COMPLETING THIS FORM

It is necessary that ALL questions on this report be answered completely and accurately.

If more space is needed, continue on a blank sheet of paper.

Nearest City/Place: Use the name of the nearest community in the state where the accident/incident occurred.

Date/Time: Indicate the date and local time of the event. Be sure to indicate the time zone.

Phase of Operation: Indicate the phase of operation during which the accident/incident occurred.

Aircraft Information: Enter aircraft make and model information as indicated on the aircraft registration certificate, including series. If the involved aircraft is certified as "amateur-built," include the name of the producer of the kit or plans, unless an NTSB employee instructs otherwise.

Maximum Gross Weight: Enter the certificated maximum gross weight for the aircraft involved in the occurrence. This should be the same as the maximum gross weight indicated on the aircraft weight and balance documents.

Engine: Enter engine make and model information as indicated on the engine data plate.

The NTSB uses this form for aircraft accident prevention activities and for statistical purposes. NTSB regulations (49 CFR Part 830) require that **ALL** questions be answered completely and accurately. Completion of this form will take approximately 60 minutes. The NTSB does not guarantee the privacy of any information provided in this form. You need not complete this form unless it displays a valid OMB control number, in accordance with 5 C.F.R. § 1320.5(b), which applies to this collection of information.

B. DEFINITIONS

1. "Aircraft Accident" means an occurrence associated with the operation of an aircraft that takes place between the time any person boards the aircraft with the intention of flight and all such persons have disembarked, and in which any person suffers death, or serious injury, or in which the aircraft receives substantial damage. For purposes of this form, the definition of "aircraft accident" includes "unmanned aircraft accident," as defined at 49 CFR 830.2.

2. "Substantial Damage" means damage or failure that adversely affects the structural strength, performance or flight characteristics of the aircraft, and that would normally require major repair or replacement of the affected component. NOTE: Engine failure or damage limited to an engine if only one engine fails or is damaged, bent fairing or cowling, dented skin, small puncture holes in the skin or fabric, ground damage to rotor or propeller blades, and damage to landing gear, wheels, tires, flaps, engine accessories, brakes, or wing tips are not considered "substantial damage" for purposes of this report.

3. "Operator" means any person who causes or authorizes the operation of an aircraft, such as the owner, lessee, or bailee of an aircraft.

4. "Fatal Injury" means any injury that results in death within thirty (30) days of the accident.

5. "Serious Injury" means any injury that (1) requires hospitalization for more than 48 hours, commencing within 7 days from the date the injury was received; (2) results in a fracture of any bone (except simple fracture of fingers, toes, or nose); (3) causes severe hemorrhages, nerve, muscle, or tendon damage; (4) involves injury to any internal organ; or (5) involves second- or third-degree burns, or any burns affecting more than 5 percent of the body surface.

Type of Fire Extinguishing System: If a fire extinguishing system was used to fight an aircraft fire, specify the type(s) of extinguishing system(s) used. Examples include handheld extinguisher, engine fire bottle, cargo/baggage compartment fire suppression system, or airport emergency ground equipment.

Owner/Operator Information: Enter the owner information as shown on the registration certificate. Commercial operators, enter the operator information, including "doing business as" when applicable, as shown on the operator certificate.

Revenue Sightseeing Flight: Indicate whether the accident aircraft was conducting revenue sightseeing operations under 14 CFR Part 91 at the time of the accident.

Air Medical Flight: Indicate whether the accident flight was being conducted for the purpose of carrying medical personnel, patient(s), or organs.

Public Aircraft: Federal, state or local government flight operations such as official travel, law-enforcement, low-level observation, aerial application, firefighting, search and rescue, biological or geological resource management, or aeronautical research. Indicate whether the flight was conducted by the armed forces, federal, state, or local government.

Purpose of Flight: 14 CFR Parts 91, 103, 133, 136, and 137: Indicate the type of operation that was being conducted at the time of the occurrence using the following definitions:

AERIAL APPLICATION--Operations using an aircraft to perform aerial application or dispersion of any substance. Examples include agricultural, health, forestry, cloud seeding, firefighting, insect control, etc.

AERIAL OBSERVATION--These flights include aerial mapping/photography, patrol, search and rescue, hunting, highway traffic advisory, ranching, surveillance, oil and mineral exploration, criminal pursuit, fish spotting, etc.

AIR DROP--Aerial operations, other than aerial application, that are intended to release items in flight.

AIR RACE/SHOW--Includes any flight operations conducted as part of an organized air race or public demonstration.

BUSINESS--includes all personal flying without a paid professional crew for reasons associated with furthering a business, including transportation to and from business meetings or work. This does not include corporate/executive operations, air taxi, or commuter operations.

EXECUTIVE/CORPORATE--Company flying with a paid, professional crew.

FERRY--Non-revenue flight under a special flight or "ferry" permit. Refer to 14 CFR 21.197 for details of special flight permit issuance.

FLIGHT TEST--Flight for the purpose of investigating the flight characteristics of an aircraft/aircraft component or evaluating an applicant for a pilot certificate or rating.

INSTRUCTIONAL--Flying while under the supervision of a flight instructor or receiving air carrier training. Personal proficiency flight operations and personal flight reviews, as required by federal air regulations, are excluded.

OTHER WORK USE--Miscellaneous flight operations conducted for compensation or hire such as construction work (not 14 CFR Part 135 operation), parachuting, aerial advertising, towing gliders, etc.

PERSONAL--Flying for personal reasons (excludes business transportation) including pleasure or personal transportation. This also includes practice or proficiency flights performed under flight instructor supervision and not part of an approved flight training program.

POSITIONING--Non-revenue flight conducted for the primary purpose of relocating the aircraft. Examples include moving the aircraft to a maintenance facility or to load passengers or cargo etc.

UNKNOWN--Use only if the primary purpose of flight is not known.

Other Aircraft--Collision: For all accidents involving a collision with another aircraft, including parked aircraft, check "Collision with other aircraft" under Basic Information and complete this section indicating details about the OTHER aircraft involved in the collision.

Airport Information: Complete this section if the accident/incident occurred on approach, landing, takeoff, departure, or within 3 statute miles of an airport. Please refer to the FAA Airport/Facility Directory or other official source for airport information.

Airport Identifier: Provide the official 3 or 4 character airport identifier number.

Runway: Indicate the number of the runway used, including L, R, or C if applicable.

Runway/Landing Surface: Indicate the type of intended runway/landing surface (do not indicate surface conditions). If the surface type was mixed, check all that apply.

Condition of Runway/Landing Surface: Indicate the condition of the intended runway/landing surface. If multiple conditions existed at the time of the accident, check all that apply.

Weather Information at the Accident/Incident Site: Indicate the weather conditions reported at the accident/incident site at the time of occurrence. If no weather reporting was available for the accident/incident site, indicate the reported conditions at the nearest reporting site. Specify the weather reporting site identifier, the observation time, and distance from the accident/incident.

Sky/Lowest Cloud Condition: Indicate the height above ground level of the lowest cloud condition present at the time of the accident/incident and whether coverage was reported as few, scattered, broken or overcast. Also indicate the height above ground level and coverage of the lowest cloud ceiling present at the time of the accident/incident (reported as broken or overcast).

NOTAMS (D and FDC), AIRMETs, SIGMETs, PIREPs: Describe all NOTAMS (distant (D) or Flight Data Center (FDC), if known), AIRMETs, SIGMETs, and PIREPs in effect near the accident/incident.

Flight Crewmember Information: Indicate the category that best describes the capacity served by this flight crewmember at the time of the accident. The designators "Flight Crewmember 1" and "Flight Crewmember 2" do not refer to a specific pilot position or responsibility. If more than one pilot is aboard, they may be entered in any order and their capacity entered as appropriate.

Degree of Injury: See Definitions on the top half of Page 1 of the instructions. Minor injury is not defined. If an injury does not meet the criteria for another injury category, select Minor.

Date of Last Flight Review or Equivalent: Enter the date of the most recent flight review, or equivalent, completed by this pilot. Refer to 14 CFR 61.56 for accepted equivalents.

Type Ratings: List all type ratings on the pilot certificate. If the pilot holds no type ratings indicate "none." If the pilot holds a pilot certificate other than student and was flying an aircraft requiring an endorsement, enter the type and date of any logbook endorsement(s) for that aircraft. See 14 CFR 61 for examples of required endorsements.

Student Endorsements: If the pilot holds a student pilot certificate, enter all solo endorsements and dates on the student pilot certificate.

Flight Time: Complete the flight time matrix. Solo flight time should be included as "Pilot-in-Command (PIC)" and all dual flight instruction given should be included as "Time as Instructor."

Additional Flight Crewmembers: Complete this section if there were more than two required flight crewmembers on the aircraft. This also includes a check airman performing official duties but does not include cabin crew. State the capacity served by each included crewmember at the time of the accident.

Passenger(s)/Other Personnel: Enter identification and injury severity information for all passengers, cabin crew, and other personnel involved in the accident. See Page 1 of the instructions for the official definition of injury levels.

Several questions throughout the form allow for multiple responses; when appropriate, choose all responses that apply.

These instructions only pertain to major issue areas covered by NTSB Form 6120.1 Pilot/Operator Aircraft Accident/Incident Report. For additional definitions of questions and responses, please refer to www.nts.gov.

Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

WHEN COMING TO A STOP AND INVESTIGATING THE AIRCRAFT DAMAGE I CAN SEE THAT BOTH WINGS WAS DAMAGE BECAUSE IT CAME TO REST AGAINST TWO TREES. THE LEFT HORIZONTAL STABILIZER WAS RIPPED OFF THE VERTICAL STABILIZER HAD DAMAGE TO IT .THE LANDING GEAR STRUT HAD DAMAGE .

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

[REDACTED]

On December 5th, 2023, I was conducting a Practical test for Jessica Maldonado-Espinoza for her private pilot airplane single engine land certificate. We departed Covington GA (KCVC) on a simulated cross country to Charlotte North Carolina. We conducted a soft field take off and departed the pattern to the northeast. When I saw she can find her points via pilot and dead reckoning I told her our passenger is complaining about chest pain might be a heart problem. She decided to divert to Athens (KAHN). She contacted the tower and entered the pattern, and I asked her what type of landing she would do if the runway was grass and wet, she said a soft field landing, so I asked her to demonstrate a soft field landing which she did with no problem. We back taxi and clear the runway and set up for departure. I then give her instructions on the ground after departure. I would like her to intercept the 240-degree radial from the Athens VOR and track it towards Covington. I also asked her if the runway was short and what kind of takeoff we would do. She said a short field takeoff. We departed Athens around 2:30 conducting a short field take off and then she intercepted the 240-degree radial after a few minutes of tracking the radial I ask her to put her view limited device on and we will simulate we in the clouds, we swap controls momentary so she can remove her sunglasses and put them on. She continues tracking the radial then I gave her a left turn, a right turn a climbing turn descending turn while holding 90 knots and 500 feet climbing and descending, we then accomplish unusual attitude. After completing her basic instrument maneuvers, we then proceed to accomplishing a steep turn, power off stall power on stall at this point we were at 4000 feet, and I can see sleepy hollow (18GA) out my right window. I reach up and retard her throttle and told her we will simulate we have an engine failure. She began her procedure by slowing to best glide and she saw sleepy hollow and turn towards it. She took out her checklist and begin trouble shooting I told her the engine still did not start so she decided to simulate declaring and emergency simulate squawking 7700 and we begin setting up to land at sleepy hollow. Jessica came across the airport midfield and entered a left down wind a left base and then turned final. While crossing midfield I reached up and cleared the engine just to make sure it was still running. She applied 10 degrees of flaps and continued for landing. The wind was gusting but nothing out of the ordinary and she was doing just fine. There were some trees approaching final we cleared the trees. After that I knew she would make the runway and she knew she could make the runway. We were about 100-200 feet I told her to go around, she begins applying power at the same time I felt the airplane sink I immediately reach up and push the throttle full forward, but the airplane will not climb I got on the control trying to fly out of whatever was happening. It felt like I was in a down draft, I felt a gust of wind hit me from the left side causing my flight path to change from runway heading to right 20 degrees and airplane kept descending I kept flying the airplane, at this point we were crossing a fence heading to a field. I believe I was not sure if my landing gear or tail hit the fence wire and then we touched down in the field. The airplane began accelerating across the ground because the engine was at full power. At this time, we were along for a ride on the ground. The field was a tree farm. We hit several trees as the airplane decelerated and the airplane came to rest about 250-300 feet from where we initially contacted the fence. We both exited the airplane after securing it and making sure Jessica was ok. I then proceeded to call my Managing specialist William Ellerbee to let him know what had happened.

ADDITIONAL INFORMATION (Please type or print in ink)

Use this space if additional space is needed for any answers.

On December 5th, 2023, I continued my flight portion of my private pilot checkride with Brendon Browne, DPE at Covington Municipal Airport (KCVC).

We departed Covington and completed a soft field take off from runway 280, I turned right downwind and began tracking my points from the VFR navigation log. I tracked two points successfully when Brendon mentioned there was a sick passenger in the backseat. I then located the closest airport, Athens Regional and contacted the tower to request landing. The tower advised me to fly left downwind and cleared me to land runway 27. Brendon requested a soft field landing, and I was able to successfully land the aircraft. Tower asked for a 180 back-taxi down the runway and to clear at B3, I was given clearance to cross runway 20 and hold short of 27.

On takeoff, Brendon asked that I track the 240 VOR Athens radial back towards Covington and we completed this for a few minutes after which I was asked if I had my foggles. Brendon briefly took controls so I could change from my sunglasses to foggles and we completed a few unusual attitudes along with climbs and descents, maintaining 90kts (we were at 4,000 FT during this time). While maintaining altitude, my foggles were removed and I completed clearing turns, into power-on, power-off stalls & steep turns.

Once the maneuvers were completed, Brendon pulled the plane to idle simulating an engine out emergency. The private airport, Sleepy Hollow 18GA, was directly to my right so I chose to cross mid-field configuring the airplane to best glide and ran my checklist- Brendon told me the plane will not restart so simulated 121.5 and 7700 and ELT. He briefly pushed power in full and back to idle (assuming this was to make sure the plane was still on). I proceeded to fly downwind to base at which point I put in 10 degrees of flaps. I cleared the tree line and we both agreed to do a go-around. I started to put in full power and Brendon came behind me immediately pushed my hand on the power to make sure it was all the way in (which it was) because we were sinking and not climbing. It felt like someone was pushing the plane down forcefully. On top of the plane sinking, we were getting pushed to the right and the plane would not recover. We hit a barbed wire fence and continued to roll about 300 feet until the plane came to a stop in front of a crepe myrtle tree. The left wing was slightly supported on top of the tree (it was later confirmed we landed in a tree farm). We both made sure there were no injuries and exited the plane.

End of Statement

Jessica Maldonado-Espinoza
