Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

Left Main Landing gear came out - Front gear bends - 2 of the 3 propeller blades are bent - Hole on the left wing

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I was on final approach at 90 knots. The wind was about 020 at 15 knots gusty to 24.

After crossing the threshold I reduced power again close to idle. I was practicing crosswind landings. Right after the left main landing gear touched the ground, the aircraft started accelerating and drifted to the left on the grass with an angle of approximately 30° of the centerline. I was unable to stop the aircraft.

In my opinion that happened due to windshear. Only thing I can think of. When the aircraft came to complete stop, the engine wasn't running and I double check that the throttle was on idle position.
