

NATIONAL TRANSPORTATION SAFETY BOARD

NTSB Form 6120.1

PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

Email the pilot/operator aircraft accident/incident report to the investigator-in-charge of your accident/incident. If email is not available, mail the report per the instructions below.

If your accident/incident occurred in Maine, Vermont, New Hampshire, Massachusetts, Connecticut, Rhode Island, New York, New Jersey, Pennsylvania, Maryland, Delaware, Virginia, West Virginia, Kentucky, Tennessee, North Carolina, South Carolina, Mississippi, Alabama, Georgia, Florida, the District of Columbia, Puerto Rico, or the US Virgin Islands, send the form to: NTSB, ERA, 45065 Riverside Parkway, Ashburn, VA 20147.

If your accident/incident occurred in Ohio, Michigan, Indiana, Wisconsin, Illinois, Minnesota, Iowa, Missouri, Arkansas, Louisiana, North Dakota, South Dakota, Nebraska, Kansas, Oklahoma, Texas, Colorado, or New Mexico, send the form to: NTSB, CEN, 4760 Oakland Street, Suite 500, Denver, CO 80239.

If your accident/incident occurred in Montana, Wyoming, Idaho, Utah, Arizona, Nevada, Washington, Oregon, California, Hawaii, or the territories of Guam or American Samoa, send the form to: NTSB, WPR, 505 South 336th Street, Suite 540, Federal Way, WA 98003.

If your accident/incident occurred in Alaska, send the form to: NTSB, ANC, 222 West 7th Avenue, Room 216, Box 11, Anchorage, AK 99513.

Rules pertaining to notification of aircraft accidents and incidents, as well as overdue aircraft are found in 49 Code of Federal Regulations (CFR) Part 830 http://www.ecfr.gov/cgi-bin/text-idx?c=ecfr&tpl=/ecfrbrowse/Title49/49cfr830_main_02.tpl. These rules state the authority of the NTSB, define accidents, incidents, injuries, and other terms, and provide procedures for initial and immediate notification of accidents and incidents by aircraft pilots/operators.

A. APPLICABILITY

The pilot/operator of an aircraft shall send a report to the office listed above, based on accident/incident location; immediate notification is required by 49 CFR 830.5(a). **The report shall be filed within 10 days after an accident for which notification is required by Section 830.5, or after 7 days if an overdue aircraft is still missing.**

An aircraft accident, as defined in 49 CFR 830.2, is determined as an occurrence that involves a fatality or serious injury, or substantial damage to the aircraft. For occurrences that do not involve a fatality, the determination that the occurrence is an accident can be appealed by writing to the Director, Office of Aviation Safety, NTSB, 490 L'Enfant Plaza, S.W., Washington, D.C. 20594.

INSTRUCTIONS TO PILOTS/OPERATORS FOR COMPLETING THIS FORM

It is necessary that ALL questions on this report be answered completely and accurately.

If more space is needed, continue on a blank sheet of paper.

Nearest City/Place: Use the name of the nearest community in the state where the accident/incident occurred.

Date/Time: Indicate the date and local time of the event. Be sure to indicate the time zone.

Phase of Operation: Indicate the phase of operation during which the accident/incident occurred.

Aircraft Information: Enter aircraft make and model information as indicated on the aircraft registration certificate, including series. If the involved aircraft is certified as "amateur-built," include the name of the producer of the kit or plans, unless an NTSB employee instructs otherwise.

Maximum Gross Weight: Enter the certificated maximum gross weight for the aircraft involved in the occurrence. This should be the same as the maximum gross weight indicated on the aircraft weight and balance documents.

Engine: Enter engine make and model information as indicated on the engine data plate.

The NTSB uses this form for aircraft accident prevention activities and for statistical purposes. NTSB regulations (49 CFR Part 830) require that **ALL** questions be answered completely and accurately. Completion of this form will take approximately 60 minutes. The NTSB does not guarantee the privacy of any information provided in this form. You need not complete this form unless it displays a valid OMB control number, in accordance with 5 C.F.R. § 1320.5(b), which applies to this collection of information.

B. DEFINITIONS

1. "Aircraft Accident" means an occurrence associated with the operation of an aircraft that takes place between the time any person boards the aircraft with the intention of flight and all such persons have disembarked, and in which any person suffers death, or serious injury, or in which the aircraft receives substantial damage. For purposes of this form, the definition of "aircraft accident" includes "unmanned aircraft accident," as defined at 49 CFR 830.2.

2. "Substantial Damage" means damage or failure that adversely affects the structural strength, performance or flight characteristics of the aircraft, and that would normally require major repair or replacement of the affected component. NOTE: Engine failure or damage limited to an engine if only one engine fails or is damaged, bent fairing or cowl, dented skin, small puncture holes in the skin or fabric, ground damage to rotor or propeller blades, and damage to landing gear, wheels, tires, flaps, engine accessories, brakes, or wing tips are not considered "substantial damage" for purposes of this report.

3. "Operator" means any person who causes or authorizes the operation of an aircraft, such as the owner, lessee, or bailee of an aircraft.

4. "Fatal Injury" means any injury that results in death within thirty (30) days of the accident.

5. "Serious Injury" means any injury that (1) requires hospitalization for more than 48 hours, commencing within 7 days from the date the injury was received; (2) results in a fracture of any bone (except simple fracture of fingers, toes, or nose); (3) causes severe hemorrhages, nerve, muscle, or tendon damage; (4) involves injury to any internal organ; or (5) involves second- or third-degree burns, or any burns affecting more than 5 percent of the body surface.

Type of Fire Extinguishing System: If a fire extinguishing system was used to fight an aircraft fire, specify the type(s) of extinguishing system(s) used. Examples include handheld extinguisher, engine fire bottle, cargo/baggage compartment fire suppression system, or airport emergency ground equipment.

Owner/Operator Information: Enter the owner information as shown on the registration certificate. Commercial operators, enter the operator information, including "doing business as" when applicable, as shown on the operator certificate.

Revenue Sightseeing Flight: Indicate whether the accident aircraft was conducting revenue sightseeing operations under 14 CFR Part 91 at the time of the accident.

Air Medical Flight: Indicate whether the accident flight was being conducted for the purpose of carrying medical personnel, patient(s), or organs.

Public Aircraft: Federal, state or local government flight operations such as official travel, law-enforcement, low-level observation, aerial application, firefighting, search and rescue, biological or geological resource management, or aeronautical research. Indicate whether the flight was conducted by the armed forces, federal, state, or local government.

Purpose of Flight: 14 CFR Parts 91, 103, 133, 136, and 137: Indicate the type of operation that was being conducted at the time of the occurrence using the following definitions:

AERIAL APPLICATION--Operations using an aircraft to perform aerial application or dispersion of any substance. Examples include agricultural, health, forestry, cloud seeding, firefighting, insect control, etc.

AERIAL OBSERVATION--These flights include aerial mapping/photography, patrol, search and rescue, hunting, highway traffic advisory, ranching, surveillance, oil and mineral exploration, criminal pursuit, fish spotting, etc.

AIR DROP--Aerial operations, other than aerial application, that are intended to release items in flight.

AIR RACE/SHOW--Includes any flight operations conducted as part of an organized air race or public demonstration.

BUSINESS--includes all personal flying without a paid professional crew for reasons associated with furthering a business, including transportation to and from business meetings or work. This does not include corporate/executive operations, air taxi, or commuter operations.

EXECUTIVE/CORPORATE--Company flying with a paid, professional crew.

FERRY--Non-revenue flight under a special flight or "ferry" permit. Refer to 14 CFR 21.197 for details of special flight permit issuance.

FLIGHT TEST--Flight for the purpose of investigating the flight characteristics of an aircraft/aircraft component or evaluating an applicant for a pilot certificate or rating.

INSTRUCTIONAL--Flying while under the supervision of a flight instructor or receiving air carrier training. Personal proficiency flight operations and personal flight reviews, as required by federal air regulations, are excluded.

OTHER WORK USE--Miscellaneous flight operations conducted for compensation or hire such as construction work (not 14 CFR Part 135 operation), parachuting, aerial advertising, towing gliders, etc.

PERSONAL--Flying for personal reasons (excludes business transportation) including pleasure or personal transportation. This also includes practice or proficiency flights performed under flight instructor supervision and not part of an approved flight training program.

POSITIONING--Non-revenue flight conducted for the primary purpose of relocating the aircraft. Examples include moving the aircraft to a maintenance facility or to load passengers or cargo etc.

UNKNOWN--Use only if the primary purpose of flight is not known.

Other Aircraft--Collision: For all accidents involving a collision with another aircraft, including parked aircraft, check "Collision with other aircraft" under Basic Information and complete this section indicating details about the OTHER aircraft involved in the collision.

Airport Information: Complete this section if the accident/incident occurred on approach, landing, takeoff, departure, or within 3 statute miles of an airport. Please refer to the FAA Airport/Facility Directory or other official source for airport information.

Airport Identifier: Provide the official 3 or 4 character airport identifier number.

Runway: Indicate the number of the runway used, including L, R, or C if applicable.

Runway/Landing Surface: Indicate the type of intended runway/landing surface (do not indicate surface conditions). If the surface type was mixed, check all that apply.

Condition of Runway/Landing Surface: Indicate the condition of the intended runway/landing surface. If multiple conditions existed at the time of the accident, check all that apply.

Weather Information at the Accident/Incident Site: Indicate the weather conditions reported at the accident/incident site at the time of occurrence. If no weather reporting was available for the accident/incident site, indicate the reported conditions at the nearest reporting site. Specify the weather reporting site identifier, the observation time, and distance from the accident/incident.

Sky/Lowest Cloud Condition: Indicate the height above ground level of the lowest cloud condition present at the time of the accident/incident and whether coverage was reported as few, scattered, broken or overcast. Also indicate the height above ground level and coverage of the lowest cloud ceiling present at the time of the accident/incident (reported as broken or overcast).

NOTAMS (D and FDC), AIRMETs, SIGMETs, PIREPs: Describe all NOTAMS (distant (D) or Flight Data Center (FDC), if known), AIRMETs, SIGMETs, and PIREPs in effect near the accident/incident.

Flight Crewmember Information: Indicate the category that best describes the capacity served by this flight crewmember at the time of the accident. The designators "Flight Crewmember 1" and "Flight Crewmember 2" do not refer to a specific pilot position or responsibility. If more than one pilot is aboard, they may be entered in any order and their capacity entered as appropriate.

Degree of Injury: See Definitions on the top half of Page 1 of the instructions. Minor injury is not defined. If an injury does not meet the criteria for another injury category, select Minor.

Date of Last Flight Review or Equivalent: Enter the date of the most recent flight review, or equivalent, completed by this pilot. Refer to 14 CFR 61.56 for accepted equivalents.

Type Ratings: List all type ratings on the pilot certificate. If the pilot holds no type ratings indicate "none." If the pilot holds a pilot certificate other than student and was flying an aircraft requiring an endorsement, enter the type and date of any logbook endorsement(s) for that aircraft. See 14 CFR 61 for examples of required endorsements.

Student Endorsements: If the pilot holds a student pilot certificate, enter all solo endorsements and dates on the student pilot certificate.

Flight Time: Complete the flight time matrix. Solo flight time should be included as "Pilot-in-Command (PIC)" and all dual flight instruction given should be included as "Time as Instructor."

Additional Flight Crewmembers: Complete this section if there were more than two required flight crewmembers on the aircraft. This also includes a check airman performing official duties but does not include cabin crew. State the capacity served by each included crewmember at the time of the accident.

Passenger(s)/Other Personnel: Enter identification and injury severity information for all passengers, cabin crew, and other personnel involved in the accident. See Page 1 of the instructions for the official definition of injury levels.

Several questions throughout the form allow for multiple responses; when appropriate, choose all responses that apply.

These instructions only pertain to major issue areas covered by NTSB Form 6120.1 Pilot/Operator Aircraft Accident/Incident Report. For additional definitions of questions and responses, please refer to www.ntsbgov.

Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

Aircraft impact occurred at the front underneath the nose of the aircraft damaging the cowling, nose gear destroyed, front windshield, top of the wing over the cockpit. Instrument panel was severely damaged with the impact. Left and right wing tip damaged due to clipping high trees, more so the left than the right.

Aircraft fuselage warped, damage on the skin in the empennage. Engine failure caused a hole in the crankcase on cylinder #4.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Saturday May 18th, 2024 I planned a flight to Montgomery, Alabama KMGM airport from Arlington Municipal KGKY.

Arriving at GKY in the late afternoon at around 15:30 local time I began to pre-flight the aircraft to be used for the flight, the aircraft is our personal aircraft, a Cessna Cardinal 177, N3268T.

Once in our hangar I began to conduct my pre-flight as usual making sure I have the required documents to fly and verifying the required documents to be on board with the aircraft. Afterwards I followed a pre-flight checklist which begins in the cockpit by turning on the master, checking the amp gauge for positive charge, the fuel gauges as well as lowering the flaps. Then I began to conduct the exterior part of the pre-flight checking my fuel quantity with a fuel gauge stick and noted I had about half a tank of fuel, sumped the fuel to check for the quality and then checked the oil from the dipstick from the engine cowling which was at 7 qts, I had in the aircraft an extra 2 quarts of oil incase I may need to add after flying to my destination and as usual I always fly with an extra quart in the baggage compartment. From the left side of the aircraft I go around from the tail to the right to finish up the rest of the exterior pre-flight. Afterwards I checked the weather once more and anything else of importance relating to my flight plan to verify, I would be making a stop at Wood County KJDD for fuel and from there head out to KMGM. Once I was all set to go, I removed the chocks and pulled the aircraft out of the hangar via a tow bar.

I was ready to start up the aircraft. It was now just past 16:00 local time, so I followed the start up procedure and confirmed with the checklist made sure the surrounding area was safe to crank and the aircraft fired right up, my oil pressure had risen normally. As I let the engine warm up at the appropriate rpm's I started to prepare for taxi, listening to the AWOS at the airport, putting in the correct frequencies etc. Contacted GKY Ground for VFR flight following to KJDD at 5,500', Ground gave me the squawk information and frequency and clearance. After requesting, I got permission to taxi to runway 16 via Alpha taxiway, before holding short of Runway 16 I did a run-up in the run-up area, followed the checklist for the run-up and everything checked out normal, the engine performed as expected and mag drops, engine gauges were all as they should be. I then set the aircraft for and prepared myself for pre-takeoff, went to hold short of the runway, called Tower for take off. When I was given clearance to take-off to the south, I proceeded to do so. It was about 16:15 by this time, On the upwind my engine gauges were indicating normally and as during the climb out, tower had me contact regional departure.

After making contact with regional departure I was given vectors and eventually resumed on navigation to KJDD at 5,500'. I arrived and landed at KJDD just past 17:00, taxied to the fuel pumps and filled the aircraft full with avgas, used the bathroom at the FBO and was ready to head on out. Sumped the fuel once again to check the fuel quality. Followed the same procedures to start up and taxi. Before taking off from KJDD I did another run-up which checked out normally. Around 1730 I Departed via runway 18 and headed direct to KMGM, contacted departure and got back on VFR flight following. I cruised at 7,500' with cruise power settings, leaned out the engine to rich of peak via the EGT's on JPI engine monitoring system, during the flight I would periodically check the engine instruments and mixture setting very often nothing was out of the ordinary. At around 20:15 local time before crossing Alabama state line over Meridian, MS I was given diversions from the controller to turn left 10-15 degrees and to descend down to 3,500' because there was precipitation along my route and weather passing over Montgomery, I was vectored to get behind it all.

After some time passed it had gotten very dark outside and the ceilings of low clouds made the horizon even darker, around 20:50 I noticed an issue. My oil pressure had significantly dropped suddenly, I recall it dropped to about 30 psi and was continuous. I immediately knew this was a problem so I declared the emergency and made the decision to go to the nearest airport to get the aircraft on the ground before this problem would escalate. Since it was just about pitch dark outside I knew I had to descend to find the airport I intended to go to which was A08 Vaiden Field. By this time my engine was still running however it was running rough, I also noticed oil leaking in the cabin specifically near my feet and the right side in the rudder pedal area. Due to the lack of oil pressure now my rpm (propeller) lever was not functioning normally.

after this my memory of this incident begins to get foggy and I don't vividly recall everything leading up to the crash and after the crash

As I approached the vicinity of the airport I began to look rigorously for it, however I was struggling to find out since it was very dark, I then attempted to turn on the runway lights at the airport by clicking on the CTAF frequency and had no luck with that. I had descended down and then flew over the airport with the help of my gps and foreflight to try and look outside my windows for any visual reference of the runway but I couldn't, I then crossed midfield joined the downwind to and base and final continuously searched for the airport/runway. At this point I had to make a decision which was to land this airport 'blindly' to fly to another airport and hope I make it. Without wasting time I made the decision to fly to the nearest airport, made a go-around and attempted to gain back as much altitude as I possibly can and I believe with the help of the controllers I was directed to Craig field. I knew the odds of making it were slim but I had to try as it was the only option I had. I recall as I was flying to Craig Field and pitching up to try to recoup the altitude I had lost while the engine was still making power (very roughly) I was also searching the surface for any notable places to safely land; a road anything flat surface with lights but found nothing. I was able to get as high as 2,000' and around 21:10 at about 6 miles away from the runway my engine had quit. From this point on my memory doesn't serve me well however I recalled seeing the airport and runway, I knew all I could do was try and glide to the runway unfortunately I did not have enough altitude for the distance I was to the runway. During this time it became quiet and I knew the engine had failed and stopped running, it was a matter of a few minutes before something tragic occurred so I began to pray and continue gliding the airplane.

I don't remember crashing and the impact itself

Somehow after crashing, I survived and was injured without fully being aware of what was going on I immediately had enough awareness to seek help, I had alerted my siblings who were in Montgomery that I had crashed and at 21:22 I was able to make a phone call to 911 where I stayed in contact with them for 46 minutes remaining in my position in the cabin of the aircraft unable to move due to the injuries on my legs and after at least an hour and a half almost two hours after I had crashed, I was found and rescued. I then found myself waking up in a hospital the next day.

I conclude this statement, I, Ali Kawsara provide this statement all to be true and have written it to the best of my abilities.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

This was a mechanical failure in-flight that caused the accident, speaking as an A&P mechanic myself it was an extreme shock that this had occurred as there were no signs of anything apparently wrong or symptoms of any issues with the engine. Now speaking after the fact and having learned what occurred with the help of three FAA Investigator I would have sent the engine to the shop where it was overhauled and checked for proper seating of the piston rings inside the cylinders.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

The oil sump had pressurized in the engine which led to all the oil escaping out through the back breather tube of the crankcase leading to the failure of the engine.
