

NATIONAL TRANSPORTATION SAFETY BOARD PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

This form to be used for reporting civil and public aircraft accidents and incidents

BASIC INFORMATION

Accident/Incident Location

Nearest City/Place: Pierson State: FL
 ZIP: 32180 Country: USA
 Latitude: 29.24701N Longitude: 81.46273W
(Enter in decimal degrees or degrees:minutes:seconds)

Accident/Incident Date/Time

Date: 05/26/2024 Local Time: 20:00
mm/dd/yyyy Time Zone: EDT

Collision with Other Aircraft: ☐ Midair ☐ On-ground ☒ None

AIRCRAFT INFORMATION

Registration Number: N1254D

Manufacturer: Cessna

Model: C172Skyhawk

Serial Number: _____

Year of Manufacture: _____

Amateur-Built: ☐ Yes ☐ No If Yes: ☐ Kit/Plans ☐ Original Design Make: _____

- ☒ IFR-Equipped and Certified
☐ Commercial Space Flight
☐ Unmanned Aircraft

Maximum Gross Weight: 2550 lbs

Weight at Time of Accident/Incident: 2250 lbs

Number of Seats: 4 Flight Crew Seats: 2

Cabin Crew Seats: _____ Passenger Seats: 2

Number of Engines: 1

Category of Aircraft

- ☒ Airplane
☐ Balloon
☐ Blimp/Dirigible
☐ Glider
☐ Gyroplane
☐ Helicopter
☐ Powered Lift
☐ Rocket
☐ Ultralight
☐ Unknown

Type of Airworthiness Certificate

(Check all that apply)

Standard

- ☒ Normal
☐ Aerobatic
☐ Balloon
☐ Commuter
☐ Transport
☐ Utility

Special

- ☐ Restricted
☐ Limited
☐ Provisional
☐ Special Flight
☐ Experimental
☐ Special Light-Sport
☐ Experimental Light-Sport

- ☐ Certificate of Authorization or Waiver (COA)
☐ None ☐ Unknown

Landing Gear

(Check all that apply)

- ☐ Retractable
☒ Tricycle ☐ Tailwheel
☐ Amphibian ☐ High Skid
☐ Emergency Float ☐ Skid
☐ Float ☐ Ski
☐ Hull ☐ Ski/Wheel
☐ Other Launch/Recovery System
☐ None ☐ Unknown

Engine Type *(Select one)*

- ☒ Reciprocating ☐ Liquid Rocket
☐ Turbo Shaft ☐ Solid Rocket
☐ Turbo Prop ☐ Hybrid Rocket
☐ Turbo Jet ☐ None
☐ Turbo Fan ☐ Unknown
☐ Electric

Fuel System Type *(Reciprocating)*

- ☐ Carburetor ☒ Fuel-Injected

Engine	Engine Manufacturer	Engine Model/Series	Manufacturer's Serial Number	Date of Mfg. <i>mm/dd/yyyy</i>	Rated Power ☐ Horsepower or ☐ lbs of Thrust	Total Time <i>(hours)</i>	Time Since: Inspection <i>(hours)</i>	Overhaul <i>(hours)</i>

Last Inspection Type

- ☐ 100-Hour ☐ Continuous Airworthiness
☐ AAIP ☐ Conditional Inspection
☐ Annual ☐ Unknown

Date Last Inspection: mm/dd/yyyy

Airframe Total Time: _____ hrs

hours measured at *(Select one)*

- ☐ Last Inspection ☐ Time of Accident/Incident

Type of Maintenance Program *(Select one)*

- ☐ Annual
☐ Conditional (Amateur-built only)
☐ Manufacturer's Inspection Program
☐ Other Approved Inspection Program (AAIP)
☐ Continuous Airworthiness
☐ Other, specify: _____

Description of Fire Extinguishing System

- ☐ None
☐ Specify: _____

Propeller 1

- ☒ Fixed Pitch
☐ Controllable Pitch
☐ Ground Adjustable

Manufacturer: _____

Model: _____

Propeller 2

- ☐ Fixed Pitch
☐ Controllable Pitch
☐ Ground Adjustable

Manufacturer: _____

Model: _____

ELT Installed: ☒ Yes ☐ No

If Yes:

ELT Manufacturer: _____

Model or Part No.: _____

TSO No.: ☐ C91 (121.5 MHz) ☐ C91a (121.5 MHz)
☐ C126 (406 MHz)

Was ELT still mounted in aircraft? ☒ Yes ☐ No

Was ELT still connected to antenna? ☒ Yes ☐ No

Did ELT Activate? ☐ Yes ☐ No

If activated:

Did ELT Aid in Locating Aircraft? ☐ Yes ☐ No

If not activated:

- Indicate Reason: ☐ Impact Damage
☐ Fire Damage
☐ Battery Expired/Damaged
☐ Unknown

Additional Equipment *(Check all that apply)*

- ☒ ADS-B
☐ Airframe Parachute
☐ Angle of Attack Indicator
☐ Autopilot

DAMAGE TO AIRCRAFT AND OTHER PROPERTY

Aircraft Damage

- ☐ None ☒ Substantial
☐ Minor ☐ Destroyed
☐ Unknown

Aircraft Fire

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Fire at Unknown Time
☐ On-Ground ☐ Unknown

Aircraft Explosion

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Explosion at Unknown Time
☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Tip of Vertical Stabilizer is damaged.
 Wing strut is damaged.
 Windshield is damaged.
 Wing tip is damaged.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

- Preflight

Wind calm, 8-10SM visibility, moisturized due to stable atmosphere. Everything was normal after preflight checklist, only thing concern was a engine oil that was indication of 5.5qt, so I fill up 1qt and decide to go.

- Landing practice

After departing from Runway 16 in Daytona, we flew directly to Flagler Airport (KFIN) to practice short-field landings and power-off 180 accuracy landings. We completed a total of six traffic patterns.

- Maneuvers

Next, we departed to the North Practice Area with NW bound departure to perform other maneuvers, including steep turns, lazy eights, chandelles, steep spirals, and eights on pylons.

- Simulated Emergencies

After the student finished all the maneuvers, I wanted him to practice some emergency procedures as well. We discussed alternator failure and cabin fire scenarios while climbing. During this time, I turned off the alternator master to simulate low voltage and then gave him a simulated engine failure.

- First simulated engine failure (over Skinners)

The first simulated engine failure was initiated somewhere at the southern tip of Lake Crescent, about 2 to 3 NM east of Skinner's Wholesale Nursery Private Airport. The student successfully simulated the entire procedure, and we established a final approach to Skinners. I then took control and climbed to 4000 feet southbound to simulate another engine failure.

- Second simulated low volts (while on the way towards 2J8)

While climbing, the student noticed that the main battery voltage was low, so he went through the abnormal checklist and restored normal electrical conditions.

- Third Simulated engine fire (over 2J8)

At this point, we were 2 to 3 NM north of Pierson (2J8), and I simulated an engine fire. The student correctly followed the checklist, and I reduced the power to idle. He executed an emergency descent towards Pierson Airport. While descending around 2500 feet, I informed him that the fire was extinguished. We decided to set up a left pattern entry for Runway 23 due to favorable winds. At this point, the student decided to perform a steep spiral to descend.

However, he ended up too high on the final approach, and it was clear that he couldn't make the simulated landing. At this point, the last recordings were made by Flight Radar24. I took control, increased power, and brought the plane back to pattern altitude on the left downwind at 1000 feet.

- Actual Emergencies

On left midfield downwind for Runway 23, I pulled the power to idle and gave control to the student to perform a simulated engine failure. A few seconds later, around 800 feet while turning from downwind to base, I noticed the engine temperature gauge was indicating in the red zone and illuminating red. I immediately took control and instructed the student to squawk 7700, then made a Mayday call on 121.5. By this time, we were already on the left base and high on the approach course. I tested the throttle response, moving it no more than half an inch, but it felt unresponsive. I avoided adding full power to prevent the risk of the engine catching fire due to excessive temperature, which could worsen the situation. As we were already on the final approach, I didn't want to take any risks. Instead, I decided to idle the power, set the flaps to 30 degrees, and performed a maximum forward slip, focusing solely on bringing the plane to the ground. However, we were too high and fast, approximately 300 feet altitude at 80 knots, with full flaps and in a full forward slip condition as we approached the runway. I managed to sound out somewhere in the middle of the runway, but the plane was not descending rapidly due

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

- Comments

I could've tried to increase the power and reestablish myself with power, but I had already experienced another engine failure three months ago. At that time, when I increased the power to full, there was serious vibration and noise, which turned out to be an engine case crack. During that previous emergency landing, I was at 4000 feet with enough altitude and distance from the airport to make a safe landing. However, this time, it happened at 800 feet, there was not enough time for me to consider other possibilities besides an engine crack. That's why I decided not to increase the power to full to test if it was just a sensor problem. What I could have done better was to rock the wings or make S-turns on final approach to lose more altitude.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Engine oil temperature indicator was high all the way to red zone. When I attempted to increase the power by about half an inch, I realized I was already high on altitude on Base Leg. I decided not to add more power to avoid the risk of engine fire or further damage due to high oil temperature. As a result, I idled the engine and decided to land. As far as I remember, when I increased the throttle by half an inch, there was no noticeable engine response.
